REGIONAL DISTRICT OF NANAIMO

BYLAW NO. 500

A BYLAW TO REGULATE THE LOCATION AND USE OF BUILDINGS AND STRUCTURES AND THE USE AND SUBDIVISION OF LAND, INCLUDING THE SURFACE OF WATER, IN THE REGIONAL DISTRICT OF NANAIMO, EXCLUSIVE OF ELECTORAL AREA 'F'

The Board of the Regional District of Nanaimo, in open meeting assembled, enacts as follows:

TITLE

This Bylaw may be cited as "Regional District of Nanaimo Land Use and Subdivision Bylaw No. 500, 1987".

APPLICATION

1. This Bylaw shall be applicable to the geographical area and to all land, buildings and structures therein of the Regional District of Nanaimo as outlined on zoning maps, which bear the words "Schedule '6A'".
2. For the purposes of this Bylaw, Schedule 'A' is attached to and forms part of this Bylaw and bears the words "Schedule 'A'".

Introduced and read two times this 10th day of February, 1987.

Public Hearings held pursuant Section 956 of the **Municipal Act** on the 31st day of March, and the 1st, 6th, 8th, 9th and 10th days of April, 1987.

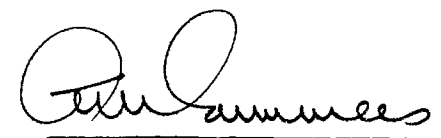

Read a third time this 14th day of April, 1987.

Received approval pursuant the **Highway Act** this 30th day of March, 1987.

Reconsidered and adopted this 21st day of April, 1987.

CHAIRMAN

SECRETARY

Regional District of Nanaimo

BYLAW NO. 500

PART 1

ADMINISTRATION

PART 1 ADMINISTRATION

1.1 Enactment

- 1) Part 3 of this Bylaw shall be deemed to be a zoning bylaw pursuant to Section 903 of the **Local Government Act** and amendments thereto.
- 2) Schedules '3C' and '3D' of this Bylaw are enacted pursuant to Section 903 and 694 of the **Local Government Act** and amendments thereto.
- 3) Schedule '3F' of this Bylaw is enacted pursuant to Section 909 of the **Local Government Act** and amendments thereto.¹
- 4) Part 4 of this Bylaw shall be deemed to be a subdivision bylaw pursuant to Sections 938 and 946 of the **Local Government Act** and amendments thereto.
- 5) For the purpose of this Bylaw, the schedules referred to herein are attached hereto and form an integral part of this Bylaw.
- 6) The following Bylaws are hereby repealed upon adoption of this Bylaw:
 - a) Subdivision and Zoning Regulations adopted by the Regional District of Nanaimo under the provisions of Order-in-Council No. 2929/70 and amendments thereto;
 - b) Greater Nanaimo Advisory Planning Commission Bylaw No. 25, 1970;
 - c) Regional District of Nanaimo Board of Variance Bylaw No. 26, 1970, and amendments thereto;
 - d) Nanoose Bay Advisory Planning Commission Bylaw No. 33, 1971, and amendments thereto;
 - e) Parksville-Qualicum Advisory Planning Commission Bylaw No. 35, 1971, and amendments thereto;
 - f) Deep Bay-Little Qualicum Advisory Planning Commission Bylaw No. 36, 1971;
 - g) South Nanaimo Advisory Planning Commission Bylaw No. 48, 1971, and amendments thereto;
 - h) Regional District of Nanaimo Zoning Bylaw No. 53, 1973, and amendments thereto;
 - i) Regional District of Nanaimo Zoning Bylaw No. 55, 1972, and amendments thereto;
 - j) Untidy and Unsightly Premises Bylaw No. 62, 1972, and amendments thereto;
 - k) Cedar Advisory Planning Commission Bylaw No. 65, 1972;
 - l) Cranberry-Bright Advisory Planning Commission Bylaw No. 66, 1972, and amendments thereto;
 - m) Untidy and Unsightly Premises Bylaw No. 70, 1972;
 - n) Zoning Bylaw Notice Authorization Bylaw No. 106, 1973;
 - o) Untidy and Unsightly Premises Bylaw No. 108, 1973;
 - p) Regional District of Nanaimo Zoning Bylaw No. 159, 1974, and amendments thereto;
 - q) Nanoose Bay Advisory Planning Commission Boundary Amendment Bylaw No. 167, 1974;
 - r) Shaw Hill-Deep Bay Advisory Planning Commission Bylaw No. 170, 1974, and amendments thereto;

¹ Bylaw No. 500.20 – adopted June 18, 1991

- s) Regional District of Nanaimo Zoning Bylaw No. 178, 1975, and amendments thereto;
- t) Lantzville Planning Commission Bylaw No. 200, 1975, and amendments thereto;
- u) Regional District of Nanaimo Zoning Bylaw No. 203, 1975, and amendments thereto;
- v) Untidy and Unsightly Premises Bylaw No. 242, 1976, and amendments thereto;
- w) Regional District of Nanaimo Zoning Bylaw No. 260, 1976, and amendments thereto;
- x) Gabriola Island Planning Establishment Bylaw No. 295, 1976;
- y) Regional District of Nanaimo Zoning and Subdivision Bylaw No. 395, 1981 and amendments thereto;
- z) Regional District of Nanaimo Zoning Consolidation and Subdivision Bylaw No. 444, 1980, and amendments thereto;
- aa) Regional District of Nanaimo Land Use and Subdivision Bylaw No. 500, 1984, and amendments thereto;
- bb) Regional District of Nanaimo Mobile Home Parks Bylaw No. 502, 1979;
- cc) Regional District of Nanaimo Rezoning Application Fee Bylaw No. 527, 1981;
- dd) Regional District of Nanaimo Advisory Planning Commission Bylaw No. 588, 1982.

1.2 Other Legislation

- 1) Nothing contained in this Bylaw shall relieve any person from the responsibility to seek out and comply with other legislation applicable to their undertaking.
- 2) Where land is within an agricultural land reserve created pursuant to the ***Agricultural Land Commission Act*** and amendments thereto and if any portion of this Bylaw is in any way contrary to, in conflict with, inconsistent with or repugnant to the ***Act***, the ***Act*** shall prevail.

1.3 General Prohibition

No person shall:

- a) cause, suffer or permit any building or structure to be used, located, constructed, altered, moved or extended;
- b) use any building or structure constructed, moved or altered;
- c) cause, suffer or permit land to be used;
- d) use land;
- e) subdivide land;
- f) use land without providing off-street parking and loading spaces;

in contravention of this Bylaw or otherwise fail to comply with the requirements of this Bylaw.

1.4 Inspection

The Planning Director and his deputies may enter, at all reasonable times, upon any land subject to the regulations of this Bylaw, to ascertain whether such regulations are being obeyed, provided that:

- a) consent to inspect the land has been obtained from the owner or occupier of the land; or

- b) where such consent has been refused, notice of the intent to inspect has been given to the owner or occupier no less than 24 hours prior to the time of inspection.

1.5 Violation

Any person who violates any of the provisions of this Bylaw or who suffers or permits any act or thing to be done in contravention of this Bylaw or who neglects to do or refrains from doing any act or thing which is required to be done by any of the provisions of this Bylaw, shall be deemed to have violated the provisions of this Bylaw.

1.6 Penalty

Any person who violates any of the provisions of this Bylaw shall, upon summary conviction thereof, be liable to a penalty of not more than \$2,000.00.

1.7 Severability

If any section, subsection, sentence, clause or phrase of this Bylaw is for any reason held to be invalid by the decision of any court, such section subsection, sentence, clause or phrase may be severed from the remaining portion of this Bylaw.

REGIONAL DISTRICT OF NANAIMO

BYLAW NO. 500

PART 2

INTERPRETATION

PART 2 INTERPRETATION

2.1 Definitions

In this Bylaw unless the context otherwise requires:

accessory building means a building or structure located on a parcel, the use of which is accessory to the principal permitted use of the land, buildings or structures located on the same parcel, and includes buildings or structures used for storage or work space by the occupants of the property, but specifically excludes buildings used for residential use;

accessory to means combined with but customarily incidental to;

accessory use means a use combined with but clearly incidental and ancillary to the principal permitted uses of land, buildings or structures located on the same parcel;

agriculture means a use providing for the growing, rearing, producing and harvesting of agricultural products, and includes the growing of crops; fruit and berry production; growing trees and shrubs; housing livestock, poultry, fur-bearing animals, bees; animal feeding and holding areas; storage of crops; and the processing of the primary agricultural products harvested, reared or produced on that farm, including the rough sawing of logs, but excludes animal care, medical marijuana production except on lands located within the agricultural land reserve, and specifically excludes the following uses on land located within the Resource Management (RM3) and Rural 5 (RU5) zones that is not located in an agricultural land reserve: feed lot; fur farm; mushroom farm; horse boarding stable; and intensive swine operation;¹

Notwithstanding the above, for Electoral Area 'G' only, the following accessory uses on lands classified as farm under the Assessment Act:²

- a. retail sales of goods wholly produced on the farm where the sales are taking place;
- b. storing, packing, product preparation, or processing of farm products if at least 50% of the farm product is produced on the farm or is feed required for farm production purposes on the farm;
- c. temporary and seasonal accommodation on a farm in campsites, seasonal cabins, or short term use of bedrooms including bed and breakfast to a maximum of one accommodation unit per hectare not exceeding a maximum of 10 per parcel provided the total developed area for buildings, landscaping, and access for accommodation is less than 5% of the parcel;
- d. the breeding of household animals; and,
- e. agricultural research and education provided that the combined total of any associated buildings and structures required for education and/or research do not exceed 100 m².

agri-tourism means a temporary and seasonal tourist oriented activity or service accessory to an agricultural use that promotes or markets products grown, raised, or processed on land that is classified as a 'farm' under the *Assessment Act* and in accordance with the *Agricultural Land Reserve Use, Subdivision, and Procedure Regulation*. Agri-tourism may include but is

¹ Bylaw No. 500.218, adopted August 12, 1997

² Bylaw No. 500.360, adopted January 25, 2011

not limited to farm tours and demonstrations, farm related educational activities, and seasonal promotional events.¹

agri-tourism accommodation means the provision of temporary and seasonal accommodation accessory to an agricultural use for the travelling public within an agri-tourism accommodation sleeping unit on land that is classified as farm under the *Assessment Act*.²

agri-tourism accommodation sleeping unit means a bedroom or other area used as a bedroom for the purpose of agri-tourism accommodation within an agri-tourism accommodation cabin, a tent or recreational vehicle in an agri-tourism accommodation campground or a bedroom within a dwelling unit.³

alpine recreation⁴ means snow skiing, snow boarding, snowmobiling, hiking, climbing or mountain biking;

amusement arcade means an establishment that contains four or more electronic or mechanical games for the entertainment of the public;

animal care means a building or structure used for veterinary clinic, animal hospital, or facilities for boarding or breeding household animals or pets;

applicant means a person applying for the approval of a subdivision, Board of Variance appeal, rezoning, a permit or a development, whether as the owner of the land or as the authorized agent of the owner;

aquaculture means the cultivation, rearing and harvesting of aquatic organisms on land or in the water, but specifically excludes seafood processing;

archaeological site means land containing material remains of archaeological value;

asphalt batch plant means the location on a parcel of a drum mixer asphalt plant;⁵

bed and breakfast means the economic activity of providing bedrooms within a dwelling unit and the first meal of the day for the temporary accommodation of the traveling public; provided that the occupancy by a member of the traveling public does not exceed 120 days in any calendar year;⁶

boat building and repair means the use of land, buildings, structures or equipment for the manufacturing, servicing or repair of boats;

boat ramp means a structure located on a shoreline to accommodate vehicles or trailers for the purpose of launching and hauling boats out of water;

building means any structure and portion thereof, including mechanical devices, that are used or intended to be used for the purpose of supporting or sheltering any use or occupancy;

campground means a parcel providing for the seasonal and temporary accommodation of travelers using tents or recreational vehicles, but specifically excludes a mobile home park or hotel;

¹ Bylaw No. 500.383, adopted June 25, 2013

² Bylaw No. 500.383, adopted June 25, 2013

³ Bylaw No. 500.383, adopted June 25, 2013

⁴ Bylaw No. 500.253, adopted January 11, 2000

⁵ Bylaw No. 500.166, deleting 'Portable', adopted April 11, 1995

⁶ Bylaw No. 500.270, adopted November 13, 2001

camping space¹ means an area within a campground, recreational vehicle park or resort vehicle park used for one recreational vehicle or tent;

category A lot means a parcel:²

- (a) located within the Resource Management 7 Zone, Resource Management 9 Zone, Rural 8 Zone, or Rural 9 Zone;
- (b) not located within the Forest Land Reserve or Agricultural Land Reserve; and
- (c) created by registration of a subdivision under the **Land Title Act (British Columbia)** or the Bare Land Strata regulation under the **Strata Property Act (British Columbia)** in the Land Title Office on or before the adoption of "Regional District of Nanaimo Arrowsmith Benson-Cranberry Bright Official Community Plan Bylaw No. 1148, 1999" by the Board of the Regional District of Nanaimo;

Chief Building Inspector means the Chief Building Inspector of the Regional District of Nanaimo;

church means a building used for religious worship and includes a Mosque, Synagogue, Temple, Chapel or religious meeting room;

community sewer system means a system of sewers and sewerage works including sewage treatment facilities owned, operated and maintained by or on behalf of the Regional District, a municipality or an improvement district;³

community water system means a system of waterworks owned, operated and maintained by or on behalf of the Regional District, a municipality or an improvement district or which is operated by a person required to hold a certificate of public convenience and necessity under the **Water Utility Act**;⁴

convenience store means a retail sales outlet contained under one roof, having a floor area not exceeding 200 m², and providing for the sale of items regularly used by households, including food, beverages, books, magazines or household accessories;

correctional facility means federal or provincial correctional facilities including halfway house for parolees where residents are appointed or placed by a court or administrative body for criminal justice;⁵

cul de sac means a highway with only one point of intersection with another highway and which terminates in a vehicle turning area;

development area means land defined by numerical map reference situated within a comprehensive development zone which is subject to specific regulations of that zone;⁶

double frontage parcel means a parcel which is either bisected by a highway or which has opposite boundaries, both of which have frontage on a highway;

duplex means two self-contained dwelling units oriented side-by-side with separate ground level entrances and adjoined by a common wall;⁷

¹ Bylaw No. 500.162, adopted April 8, 1997

² Bylaw No. 500.253, adopted January 11, 2000

³ Bylaw No. 500.238, adopted February 10, 1998

⁴ Bylaw No. 500.238, adopted February 10, 1998

⁵ Bylaw No. 500.179, adopted January 9, 1996

⁶ Bylaw No. 500.95, adopted February 12, 1991

⁷ Bylaw No. 500.293, adopted August 12, 2003

dwelling unit means one self-contained unit contained within common walls with a separate entrance intended for year-round occupancy and the principal use of such dwelling unit is residential with complete living facilities for one or more persons, including permanent provisions for living, sleeping, cooking and sanitation;¹

eligible subdivision² means lands located within a subdivision of a category A lot;

emergency services³ means the non-commercial use of land, buildings and structures for fire, police and ambulance services and may include temporary living accommodations for emergency service personnel.

explosives manufacturing means the use of land, buildings and structures for the manufacturing and storage of a product, substance, material or compound used for blasting purposes;

extraction use means the extraction of soil;

fairground means the use of land, buildings and structures for entertainment and recreational activity generally undertaken in an outdoor setting, where the users constitute a significant element in the activity, and includes go-cart track, waterslide, mini-golf course, amusement park;

farm retail sales means the sale to the public of products grown or raised on a farm, from that farm and may include the sale of non-farm products in accordance with the *Agricultural Land Reserve Use, Subdivision, and Procedure Regulation*.⁴

fast food outlet means an eating establishment providing for the sale of prepared food and beverages that can be consumed in vehicles, taken off the premises for consumption or consumed on the premises;

feeder swine⁵ means a pig, between the age of 8 weeks and 6 months, weighing less than 102 kilograms;

feed lot⁶ means the use of land, buildings or structures for the purposes of keeping greater than 6 cattle per hectare on land upon which the feed lot is situated;

final approval means the Approving Officer affixing his signature to a subdivision plan pursuant to the **Land Title Act** and amendments thereto;

floor area means the sum total of the gross horizontal area of each floor of a building as measured from the outermost perimeter of a building, excluding roof overhangs of less than 1.3 metres;⁷

floor area ratio means the figure obtained when the floor area of all buildings on a parcel, except those areas of a building providing covered parking area, is divided by the area of the parcel;⁸

frontage means that length of a parcel boundary which abuts a highway;

¹ Bylaw No. 500.113, adopted August 12, 1991

⁷ Bylaw No. 500.275, adopted October 9, 2001

⁸ Bylaw No. 500.95, adopted February 12, 1991

funeral parlour means an establishment with facilities for the preparation of the dead for burial or cremation, for viewing of bodies, and for funerals;

fur farm¹ means the use of land, buildings or structures for the purposes of keeping fur-bearing animals and specifically excludes household animals, pets and rabbits;

gas bar means a premise containing not more than two gasoline pumping stations and which is used solely for the sale of fuel, lubricating oil and minor motor vehicle accessories directly to the users of motor vehicles;

gasoline service station means the use of land and structures for gasoline pumping stations and premises under one roof for:

- a) a sales outlet, having a gross floor area not exceeding 100 m², providing for the retail sales of items regularly used by households including food, beverages, books, magazines, and household accessories;
- b) the retail sales of motor vehicle accessories;
- c) the servicing and cleaning of motor vehicles;
- d) but specifically excludes vehicle sales, body work, painting and third party repairs;

gross leasable area (g.l.a.) means the floor area of a building that is designed to be rented or leased;

guest accommodation means temporary accommodation provided within a building or part of a dwelling unit and does not provide any provisions for cooking, sanitation or permanent residential occupancy² except for a maximum of 5 guest accommodation units to be used to accommodate seasonal employees and is not subdividable pursuant to the **Strata Property Act**.³

heavy equipment display means the use of land, buildings or structures for the display, sale or rental of mobile homes, industrial vehicles and machinery, and includes outdoor sales, and includes accessory servicing of such equipment;⁴

heavy industry means the use of land, buildings or structures for the storage, collection, processing, repairing, salvage or recycling of a product, article, substance, material, fabric or compound and includes a vehicle wrecking yard and seafood processing, but specifically excludes a waste disposal site;⁵

height means the elevation of a point directly below:

- a) that part of the building or structure being measured above land (or the surface of water at high water), and;
- b) on a line connecting the two intersections of the natural grade and the outermost exterior building walls or supports as indicated on a plan showing any complete vertical section of that part of the building or structure being measured;

⁴ Bylaw No. 500.13, adopted October 13, 1987

⁵ Bylaw No. 500.113, adopted August 13, 1991

but specifically excludes chimney, mast aerial, church spire, flag pole, watertank, observation and transmission tower, mechanical devices necessary for the operation of a building, and agricultural buildings or structures where permitted in the applicable zone;

highway includes a street, road, lane, bridge, viaduct and any other way open to the use of the public, but specifically excludes private rights of way on private property;

historic site means land, buildings or structures of historic or heritage significance;

home based business means an economic activity conducted as an accessory use on a parcel;¹

home based business floor area means the sum total of gross horizontal area of each floor of those portions of a dwelling unit, attached garage or accessory building containing or used for a home based business, as permitted by this Bylaw;²

horse boarding stable³ means the use of land, buildings or structures for the purposes of keeping greater than 6 horses per hectare and specifically excludes accessory recreational uses;

hotel means a motel, resort or lodge, providing accommodation on a temporary basis and is not subdividable pursuant to the **Strata Property Act**;⁴

hotel unit means one self contained unit comprising a single tenancy with a separate entrance from a public space, corridor, common property or internally through the unit, intended for temporary accommodation and may contain a maximum of one area intended for use for food preparation, but specifically excludes the use of a mobile home as a hotel unit;^{5,6}

household animal means a domesticated animal kept by a household, which is used or the product of which is used primarily and directly by the household and not for sale or profit, and includes fowl and poultry, but specifically excludes livestock;

inn⁷ means a building used exclusively for the temporary accommodation of the general public in hotel units wherein payment for occupancy is required to be made on a daily or weekly basis;

intensive swine operation⁸ means the use of land, buildings or structures for the purposes of keeping greater than 3 brood sows and 4 feeder swine per hectare;

internal access road means an internal access allowance within a campground, mobile home park or multiple dwelling unit development which is suitable for vehicular use;

include means as an example, but not limited to;

lake means a body of water other than the sea having a surface area of at least 2.0 ha for at least six months of the year;

lane means a highway not less than 6.0 m nor more than 7.5 m wide, which provides secondary access to any abutting parcel;

land includes the surface of water;

¹ Bylaw No. 500.270, adopted November 13, 2001

² Bylaw No. 500.270, adopted November 13, 2001

³ Bylaw No. 500.218, adopted August 12, 1997

⁴ Bylaw No. 500.74, adopted October 8, 1991

⁵ Bylaw No. 500.74, adopted October 8, 1991

⁶ Bylaw No. 500.123, adopted December 10, 1991

⁷ Bylaw No. 500.253, adopted January 11, 2000

⁸ Bylaw No. 500.218, adopted August 12, 1997

light industry means the wholesale, warehousing, testing, service, repair or maintenance of an article, substance, material, fabric or compound; and includes artisan and manufacturing shop, having a gross floor area not exceeding 200 m², and retail sales accessory to the principal use;

livestock means animals used for agricultural purposes, which are used or the products of which are sold, and includes any horse, donkey, mule, cow, goat, sheep or pig;

loading space means a space for the loading or unloading of a vehicle either outside or inside a building or structure, but specifically excludes maneuvering aisles and other areas providing access to the space;

log storage and sorting yard means land used for the storage, dumping, sorting, booming and trans-shipment of logs;

lot means the same as parcel;

lot line means the legally defined line or lines bounding any parcel:

- a) **exterior side lot line** means a lot line or lines not being a front or rear lot line and common to the parcel and a highway, natural boundary, unregistered Crown Land;¹
- b) **front lot line** means a lot line common to the parcel and an abutting highway or, where there is more than one such line, the shortest such line shall be considered as a front lot line, and any line which does not conform to any other definition of a lot line shall be deemed to be a front lot line; for a panhandle lot, the line separating the body of the lot from the panhandle shall be considered the front lot line;
- c) **interior side lot line** means a lot line not being a rear lot line and common to more than one parcel;
- d) **rear lot line** means the lot line opposite to and most distant from the front lot line and not abutting a highway, or where a rear portion of the parcel is bounded by intersecting side lot lines, it shall be the point of such intersection;²

major road means a highway designated a major road pursuant to an Official Community Plan adopted by the Regional District;

marina means moorage and launching facilities, including the rental and maintenance of boats and seaplanes, and which is equipped with public toilets and refuse disposal facilities located on land above the natural boundary;

marina sales means the use of land, buildings or structures for the sale and rental of boats and accessory marine equipment, but specifically excludes boat building and repair;

marine fuel supply station means a structure used primarily for the sale of fuel directly to boaters;

marshalling yard means the use of land, buildings and structures to store and maintain industrial equipment and vehicles;

Medical Health Officer means the Medical Health Officer or his delegate appointed pursuant to the **Health Act** and amendments thereto;

¹ Bylaw No. 500.123, adopted December 10, 1991

² Bylaw No. 500.17, adopted February 14, 1989

medical marihuana production means the cultivation and production of medical marihuana wholly within a facility as permitted under the **Marihuana for Medical Purposes Regulations (MMPR)**, and any subsequent regulations or acts which may be enacted henceforth;

medium industry means the use of land, buildings or structures for assembling, processing, manufacturing or repairing of a product, article, substance, material, fabric or compound, but specifically excludes seafood processing and uses permitted in the Industrial 4 and Industrial 5 zones;

minimum parcel size means the smallest area into which a parcel may be subdivided;

minimum site area means the smallest contiguous portion of a parcel that is required by law for the development of one permitted use;

mobile home means a dwelling unit designed to be moved from time to time, which arrives at the site where it is to be occupied complete and ready for occupancy except for placing on foundation supports, connection of utilities, and some incidental assembly, and meets or exceeds Canadian Standards Association, Z-240 Standards or the requirements of the Chief Building Inspector, but specifically excludes recreational vehicles;

mobile home area means that part of a mobile home park used for siting mobile homes;

mobile home pad means an area within a mobile home space designated, designed and prepared for the support of a mobile home, surfaced with materials and provided with anchorage in accordance with the building regulations adopted pursuant to the **Local Government Act** and amendments thereto;

mobile home park means an unsubdivided parcel of land, not subdivided pursuant to the **Strata Property Act** and amendments thereto, on which are situated three or more mobile homes for the purposes of providing residential accommodation, but specifically excludes a hotel;¹

mobile home space means an area of land within a mobile home area for installation of one mobile home;

motocross track² means the use of land or structures for motorcycle motocross on a closed dirt track for recreational, training or competitive purposes but specifically excludes buildings and the use of any other type or form of motor vehicle, trailer, traction engine, farm tractor, road building machine and any vehicle drawn, propelled or driven by any kind of power including muscular power whether the vehicle is licensed or not under the **Motor Vehicle Act**;

Mount Arrowsmith employee³ means an individual either employed or self-employed and whose place of employment is situated within the boundaries of Mount Arrowsmith Regional Park;

Mount Arrowsmith staff⁴ means a Mount Arrowsmith employee or individuals cohabiting with a Mount Arrowsmith employee in common occupancy;

multiple dwelling unit development means the establishment of three or more dwelling units on a parcel;

¹ Bylaw No. 500.123, adopted December 10, 1991

² Bylaw No. 500.253, adopted January 11, 2000

³ Bylaw No. 500.253, adopted January 11, 2000

⁴ Bylaw No. 500.253, adopted January 11, 2000

mushroom farm¹ means the use of buildings or structures for the purposes of growing, producing, storing, and processing of mushrooms;

natural boundary means the visible high water mark on any watercourse where the presence and action of the water are so common and usual, and so long continued in all ordinary years, as to mark upon the soil of the bed of the watercourse a character distinct from that of the banks thereof, in respect to vegetation as well as in respect to the nature of the soil itself;

natural site means land of scenic or environmental significance;

neighbourhood pub means an establishment operating under a 'D' type license issued pursuant to the **Liquor Control and Licensing Act** and amendments thereto;

non-resident employee means an employee of a home based business who is not a permanent resident of the parcel on which the home based business is located;²

nursery means the use of land principally involved in agriculture or horticulture and accessory product sales and garden supply sales, but specifically excludes the sale of agricultural or horticultural machinery;

office means the occupancy or use of a building for the purpose of carrying out business or professional activities, but specifically excludes retail activities and personal service use;

outdoor recreation means a recreational activity undertaken where the outdoor setting and landscape is a significant element in the activity, and the density of recreational users is not a significant element and includes playing field, botanical garden, arboretum, outdoor exhibit, golf course, driving range and mini golf where the course structures do not exceed 1 m in height;³

outdoor sales means the use of land, buildings or structures for the retail sale of lumber and building products and the display, sale or rental of recreational vehicles, automobiles, mobile homes and boats, and includes accessory servicing of such equipment;^{4,5}

Panhandle (not to scale)

panhandle means a strip of land which provides access and highway frontage to a parcel, and which forms part of that parcel, as illustrated below:

¹ Bylaw No. 500.218, adopted August 12, 1997
² Bylaw No. 500.270, adopted November 13, 2001
³ Bylaw No. 500.96, adopted January 8, 1991
⁴ Bylaw No. 500.79, adopted April 10, 1990
⁵ Bylaw No. 500.13, adopted October 13, 1987

parcel means the smallest area of land which is registered in the Land Title Office, except that a parcel divided pursuant to the Strata Property Act and amendments thereto and not contained within a Bare Land Strata Plan shall not be considered subdivided for the purpose of this Bylaw;

parcel area means the total horizontal area between the lot lines of a parcel;

parcel coverage means the sum total horizontal area as measured from the outermost perimeter of all buildings or part thereof on the parcel expressed as a percentage of the total parcel area;

parcel depth means the distance between the front lot line and the most distant part of the rear lot line of a parcel;

park means deeded public land used or intended for outdoor recreation purposes, and includes an archaeological, historical or natural site;

parking space means the space for the parking of one vehicle either outside or inside a building or structure, but excludes maneuvering aisles and other areas providing access to the space;

permitted use means the principal permissible purpose for which land, buildings or structures may be used, and for the purpose of this Bylaw all uses not listed as permitted shall be deemed to be a prohibited use in that zone;

personal care means a community care facility developed in accordance with the Community Care Facility Act and amendments thereto, or a hospital developed in accordance with the Hospital Act and amendments thereto;

personal care unit mean a dwelling unit designed in conjunction with special support facilities, such as food, housekeeping and medical services, and used by persons requiring such services on a regular basis and may include housing for the elderly and handicapped and other residential arrangements operated by a society or organization for charitable, religious, educational or social purposes, but does not include correctional facilities where residents are appointed or placed by a court or administrative body for criminal justice;¹

personal service use means a use whereby professional or personal services are provided and the sale of goods, wares, merchandise, articles or things accessory to the provision of such services, and includes barber shop, beauty salon, shoe repair shop, drycleaning shop and launderette;

pet means a tame animal, kept as a favourite by a household and not primarily for sale or profit, and commonly housed within a dwelling unit;

Planning Director means the Planning Director of the Regional District;

potable water means water which meets the drinking standards in accordance with regulations of the relevant enactments;

preliminary layout approval means a written review by the Approving Officer indicating that a proposed plan of subdivision is acceptable subject to stated conditions which must be fulfilled prior to final approval;

primary processing means the use of land, buildings or structures for the moving, crushing, washing, screening, processing or storage of soil;

¹ Bylaw No. 500.179, adopted January 9, 1996

principal use means the main use of land, buildings or structures as listed under the permitted uses of the applicable zone;

produce market means a building or structure providing for the retail sale of agricultural produce including vegetables, fruit and seafood;

produce stand means a building or structure not exceeding 100 m² in area providing for the retail sale of fresh agricultural produce, which are produced on the same farm on which the stand is located;

public assembly use means the use of land, buildings or structures to accommodate exhibits, special events or meetings and includes auditorium, church, museum, community hall, fraternal lodge, youth centre, theatre;

public utility use¹ means the use of land, buildings or structures for the provision of community water or sewer services, park, public access, pipelines, electric and telephone service, emergency services, government office or cemetery;

railway means a railway and accessory uses as defined by the **Railway Act**;²

recreation facility means a facility used and equipped for the conduct of sports and leisure activities and includes pool hall, bowling alley, games court, curling and roller rink, health club, spa, swimming pool, but specifically excludes amusement arcade and fairground;

recreational vehicle means any vehicle, trailer, coach, house-car, structure or conveyance designed to travel or be transported on a highway and constructed and equipped to be used as temporary living or sleeping quarters by travelers;

recreational vehicle park³ means a parcel providing for the seasonal and temporary accommodation of travelers for not more than six months of the calendar year using tents or recreational vehicles, not exceeding 37m² (400 ft²) in floor area, but specifically excludes a mobile home park or hotel;

Regional District means the Regional District of Nanaimo;

remainder means that portion of a parcel being subdivided which is shown on the same Certificate of Indefeasible Title before and after the subdivision;

residential use means the accommodation and homelife of a person or persons in common occupancy, and shall only be conducted within a dwelling unit;

resort condominium development means a hotel and includes hotel units subdivided pursuant to the **Strata Property Act** and amendments thereto;⁴

resort condominium unit means a hotel unit which is subdivided pursuant to the **Strata Property Act** and amendments thereto;⁵

resort vehicle park⁶ means a parcel providing for seasonal or periodic accommodation of travelers or residents using tents or recreational vehicles not exceeding 37 m² (400 ft²) in floor area, but specifically excludes a mobile home park or hotel;

¹ Bylaw No 500.386, adopted November 26, 2013

² Bylaw No. 500.283, adopted August 13, 2002

³ Bylaw No. 500.162, adopted April 8, 1997

⁴ Bylaw No. 500.74, adopted October 8, 1995

⁵ Bylaw No. 500.74, adopted October 8, 1995

⁶ Bylaw No. 500.162, adopted April 8, 1997

restaurant means an eating establishment providing for the sale of prepared foods and beverages to be consumed on the premises, but specifically excludes neighbourhood pub and fast food outlet;

retaining wall means a structure erected to hold back or support a bank of earth;

retail store means a sales outlet contained under one roof, having a gross floor area not exceeding 2000 m², and providing for the retail sale and display of goods, but specifically excludes industrial uses and gasoline service station;

road means the same as highway;

school means privately funded, parochial and public schools;

seafood processing means the storage, drying, cooking, packing, preparation and manufacture of any aquatic organism;

secondary suite means one or more habitable rooms and a cooking facility for residential accommodation, consisting of a self-contained unit with a separate entrance but which is clearly accessory to a principal dwelling unit located on the same parcel as the secondary suite and may not be subdivided under the *Strata Property Act*.¹

separation distance means the minimum horizontal distance between a building or structure or part thereof to another building or structure or part thereof;²

setback means the required minimum horizontal distance measured from the respective lot line or natural boundary to any building or structure or part thereof;

shipping yard means the use of buildings, structures or land providing for the trans-shipment of goods;

shopping centre means a group of sales and service outlets, including retail store, personal service, amusement arcade, office, recreation facility, restaurant, contained within a single building or structure sharing a common roof, having a floor area not exceeding 20 000 m², and located on a single parcel;

silviculture means all activities related to the development and care of forests, including the removal of harvestable timber stocks, but specifically excludes the processing of wood or wood products;

ski lodge³ means a building within which are located administrative uses of a nature customarily incidental, subordinate and exclusively devoted to an alpine recreation use including office, ticket booth, child care facility, and changing area and lockers. In conjunction with one or more of the administrative uses, a ski lodge may also contain the following commercial uses: hotel unit; sale or rental of alpine recreation equipment; tourist store; restaurant; or establishment operating under a Class A, Recreational Centre License issued pursuant to the **Liquor Control and Licensing Act**;

slope means the figure obtained when the vertical distance of an area of land is divided by the horizontal distance, expressed as a percentage;

soil includes sand, gravel, rock or other substance of which land is composed;

¹ Bylaw No. 500.389, adopted May 27, 2014

² Bylaw No. 500.61, adopted March 27, 1990

³ Bylaw No. 500.253, adopted January 11, 2000

structure¹ means anything that is constructed or erected, and includes swimming pool, mobile home space, camping space and major improvements accessory to the principal use of land, but specifically excludes landscaping, paving improvements and signs under 1.0 m in height, retaining walls under 1.0 m in height that retain less than 1.0 m of earth and fences under 2.0 m in height;

swine² means any pig, piglet, hog, sow, brood sow or boar being both over the age of 8 weeks and weighing greater than 18 kilograms;

theatre means a building or structure designed to stage public performances;

tourist information booth means a building or structure that is used solely for the purpose of providing information to the traveling public;

tourist store means a retail sales outlet contained under one roof, having a gross floor area not exceeding 200 m², and providing for the retail sale of goods to the traveling public, and provision for personal service use and/or office use;³

transportation terminal means the use of land, buildings or structures for taxi, bus, railway stations, airport, and the storage and maintenance of transportation equipment;

unattended public utility use means a public utility use which generally does not require personnel on a regular basis for operation of the facility;

use means the same as permitted use;

vehicle means a vehicle licensed pursuant to the **Motor Vehicle Act**, and any vehicle or portion thereof which does not have a valid license plate on the vehicle and which is not stored in a building shall be deemed to be a derelict vehicle;

vehicle wrecking yard means the use of land or a structure not totally enclosed by walls or a roof for the dismantling or wrecking of vehicles, or for the storage of derelict vehicles;⁴

waste disposal site means the use of land or buildings for the treatment and disposal of solid wastes, operated by the Regional District or a Municipality;

watercourse means any natural or man-made depression with well defined banks and a bed of 0.6 m or more below the surrounding land serving to give direction to or containing a current of water at least six months of the year and includes the sea or any lake, river, stream, creek, spring, ravine, swamp, gulch, surface source of water supply or source of groundwater supply whether enclosed or in a conduit;

wood processing⁵ means a building, structure or equipment operating during normal daylight hours, processing less than 60 m³ of logs per day including the preparation of logs, fence posts, shakes, poles or firewood;

wood waste disposal facility⁶ means the use of lands, buildings, and structures for the processing of sawmill, construction, land clearing wood waste materials under agreement with the Regional District of Nanaimo.

¹ Bylaw No. 500.123, adopted December 10, 1991

² Bylaw No. 500.218, adopted August 12, 1997

³ Bylaw No. 500.150, adopted November 9, 1993

⁴ Bylaw No. 500.113, adopted August 13, 1991

⁵ Bylaw No. 500.253, adopted January 11, 2000

⁶ Bylaw No. 500.253, adopted January 11, 2000

REGIONAL DISTRICT OF NANAIMO

BYLAW NO. 500

PART 3

LAND USE REGULATIONS

PART 3 LAND USE REGULATIONS

3.1 Zones

- 1) For the purpose of this Bylaw, the area described in the section of this Bylaw entitled **Application** is hereby divided into zones designated and described by the following classifications and their short title equivalents:

ZONE CLASSIFICATION	SHORT TITLE
Agriculture 1	AG1
Commercial 1 Zone	CM1
Commercial 2 Zone	CM2
Commercial 3 Zone	CM3
Commercial 4 Zone	CM4
Commercial 5 Zone	CM5
Commercial 6 Zone	CM6
Commercial 7 Zone	CM7
Commercial 8 Zone	CM8
Conservation 1 Zone	ES1
Industrial 1 Zone	IN1
Industrial 2 Zone	IN2
Industrial 3 Zone	IN3
Industrial 4 Zone	IN4
Industrial 5 Zone	IN5
Public 1 Zone	PU1
Public 2 Zone	PU2
Public 3 Zone	PU3
Public 4 Zone	PU4
Public 6 Zone	PU6
Recreation 1 Zone	RC1
Recreation 2 Zone	RC2
Recreation 3 Zone	RC3
Recreation 4 Zone	RC4
Recreation 5 Zone	RC5
Recreation 6 Zone	RC6
Residential 1 Zone	RS1
Residential 1.1 Zone	RS1.1
Residential 2 Zone	RS2

ZONE CLASSIFICATION continued	SHORT TITLE
Residential 2.1 Zone	RS2.1
Residential 3 Zone	RS3
Residential 4 Zone	RS4
Residential 5 Zone	RS5
Residential 6 Zone	RS6
Residential 7 Zone	RS7
Residential 8 Zone	RS8
Resort Commercial	RCM

Crown and Anchor Campground Comprehensive Development Zone 42 ¹	CD42
Schooner Bay Manor Seniors Mobile Home Park Comprehensive Development Zone 43 ²	CD43
Lakes District Comprehensive Development Zone (CD44)	CD44
Schooner Cove Comprehensive Development Zone (CD45)	CD45

- 2) The extent of each zone is shown on Schedule '3A'.
- 3) Where a zone boundary is designated as following a highway or a watercourse, the centerline of the highway or the natural boundary of the watercourse or the centerline of a creek shall be the zone boundary.
- 4) Where a zone boundary does not follow a legally defined line, and where distances are not specifically indicated, the location of the boundary shall be determined by scaling from Schedule '3A'.

¹ Bylaw No. 500.367, adopted April 26, 2011

² Bylaw No. 500.368, adopted October 4, 2011

- 5) Where a parcel is divided by a zone boundary, the areas created by such division shall be deemed to be separate parcels for the purpose of determining parcel coverage, setbacks, minimum site area and floor area ratio of this Bylaw¹.
- 6) Where a parcel exists prior to the effective date of this Bylaw and the site area of the parcel does not conform to the provisions of this Bylaw, such parcel having an area less than the specified site area in the applicable zone may:
 - a) be used for only one permitted use in the applicable zone, provided that the requirements of the authority having jurisdiction are met with respect to provision of water and method of sewage disposal and the use may not be extended; or
 - b) be developed in accordance with the provisions and regulations of the Residential 1 zone.
- 7) Site area requirements do not apply to an unattended public utility use and park; and such uses are permitted in each zone.

3.2 General Operative Clauses

1) Permitted Uses

No land, building or structure in any zone shall be used for any purpose other than that specified for the zone in which it is located in the schedules contained in this Part.

2) Siting, Size and Shape

No building or structure shall be constructed, moved or altered so that its:

- a) site area is less;
- b) siting provides less setback requirements;
- c) parcel coverage is greater;
- d) height is greater;
- e) floor area ratio is greater; or
- f) total number of units, buildings or structures is greater than specified for the zone in which it is located in the schedules contained in this Part.

3) Parcel Area, Shape and Dimensions²

- a) Land shall not be subdivided to create parcels having a minimum parcel area less than that prescribed by Schedule '4B' of this Bylaw, nor with shape or dimensions contrary to those prescribed by Section 4.4 of this Bylaw.
- b) For the purpose of this Bylaw in determining how parcel areas are expressed on plans registered after February 22, 2011, the size of a parcel shall be determined by reference to parcel size established by a B.C. Land Surveyor based on the following table:

¹ Bylaw No. 500.123, adopted December 10, 1991

² Bylaw No. 500.500.360, adopted January 25, 2011

Expression of Parcel Areas

Parcel Size	Maximum Number of Decimal Places Accepted
up to 0.1 ha	quote to 0.1m ²
from 0.1 ha up to 1 ha	quote to 0.001 ha
from 1 ha up to 10 ha	quote to 0.01 ha
from 10 ha up to 100 ha	quote to 0.1 ha
from 100 ha and over	quote to 1 ha

4) **Off-Street Parking and Loading Spaces**

Off-street parking and loading spaces shall be provided in accordance with the regulations of this Part.

5) **Setbacks**

Setbacks shall be provided in conformity with this Part.

3.3 General Regulations

1) **Accessory Buildings and Structures**

Buildings and structures accessory to the permitted use of a parcel are permitted in each zone, unless otherwise specified, provided that:

- a) the principal use is being performed on the parcel; or
- b) a building for the purpose of the principal use has been constructed on the parcel; or
- c) a building for the purpose of the principal use is in the process of being constructed on the parcel.

2) **Common Accessory Uses**

Accessory buildings and structures in a multiple dwelling unit development, resort condominium development or development pursuant to the **Strata Property Act**, shall be limited to accessory buildings and structures indicated as common property on the strata plan and generally intended for the common use of property owners or occupiers in the development, and may include facilities for storage, parking, laundry, service and recreation.¹

3) **Storage of Fuel**

No parcel shall be used for the storage, warehousing, distribution or wholesale of any type of fuel or flammable or combustible liquids in either above ground or below ground tanks in excess of 4546 litres (1,000 imperial gallons); and further that this regulation does not apply to industrial zones, gasoline service stations, marine fuel supply stations, asphalt batch plants or to fuel used for residential heating purposes.²

¹ Bylaw No. 500.74, adopted October 8, 1991

² Bylaw No. 500.123, adopted December 10, 1991

4) **Vehicle Wrecking Yard or Refuse**

Unless specifically permitted, no parcel shall be used as a vehicle wrecking yard or for the collection or storage of refuse.¹

5) **Keeping of Animals**

In all zones where agriculture, animal care or agricultural products processing is not a permitted use, the keeping of animals shall be deemed to be an accessory use and shall be limited to:

- a) on parcels less than 1000 m² in size the keeping of animals is restricted to pets;
- b) on parcels 1000 m² or greater in size, the keeping of animals is restricted to household animals or pets.
- c) on parcels 1.0 ha or greater in size, the keeping of household animals, pets and livestock is permitted.²

6) **Landscaping**

Landscaping shall be provided in accordance with the regulations of this Part.

7) **Setbacks - Sight Triangle**

On a corner parcel in any zone there shall be no obstruction to the line of vision above the height of 0.5 m of the established grade of a highway within the sight triangle, being a triangular area formed by extending a 6.0 m boundary along the parcel lines from the point of the exterior corner intersection of the parcel lines and a line connecting these two points as illustrated below:

Sight Triangle (not to scale)

¹ Bylaw No. 500.113, adopted August 13, 1991

² Bylaw No. 500.13, adopted October 13, 1987

8) **Setbacks - Watercourses, excluding the Sea**

- a) On parcels with an average slope of 5% or less adjacent to or containing a watercourse, no building or structure shall be constructed, altered, moved or extended within the following setbacks:
 - i) within 15.0 m horizontal distance from the natural boundary or within 18.0 m horizontal distance from a stream centerline, whichever is greater as illustrated in Table 1 and Table 2 of Schedule '3E';
 - ii) within 30.0 m horizontal distance from the natural boundary of the Nanaimo River, the Englishman River, the Little Qualicum River and the Qualicum River.
- b) On parcels with an average slope of greater than 5% adjacent to or containing a watercourse, no building or structure shall be constructed, altered, moved or extended within the following setbacks:
 - i) within 9.0 m horizontal distance from the top of the slope or the first significant and regular break in the slope as illustrated in Table 3 of Schedule '3E';
 - ii) within 30.0 m horizontal distance from the natural boundary of the Nanaimo River, the Englishman River, the Little Qualicum River and the Qualicum River.

9) **Setbacks - Sea¹**

- a) For all Electoral Areas, except Electoral Area 'E', on parcels adjacent to or containing a coastal watercourse, no building or structure shall be constructed, moved, extended
 - i) within 8.0 metres horizontal distance inland from the top of a slope of 30% or greater; or
 - ii) within 8.0 metres horizontal distance from the natural boundary, whichever is greater.
- b) For Electoral Area 'E', on parcels adjacent to or containing a coastal watercourse, no building or structure shall be constructed, moved, extended
 - i) within 8.0 metres horizontal distance inland from the top of a slope of 30% or greater; or
 - ii) within 15.0 metres horizontal distance from the natural boundary, whichever is greater.

10) **Setbacks - Agricultural Buildings**

All buildings and structures for housing animals, other than pets, and for the storage of manure shall be a minimum of 30.0 m from a watercourse or any property line adjoining a residential zone.

11) **Density - Category A Lots²**

For clarity, where a category A lot is divided between more than one zone, two dwelling units are permitted on only one parcel located within the eligible subdivision.

¹ Bylaw No. 500.324, adopted February 28, 2006

² Bylaw No. 500.253, adopted January 11, 2000

12) **Home Based Business**¹

On parcels where a home based business is a permitted use, the following provisions apply:

- a) The following activities shall be permitted as a home based business:
 - i) processing of goods;
 - ii) sales of related or unrelated goods combined with home based business product sales to a maximum of 1/3rd of home based business floor area;
 - iii) bed and breakfast provided the activity is contained wholly within the dwelling unit to a maximum of 2 bedrooms in Residential 1 and 3 zones and to a maximum of 4 bedrooms in all other zones where permitted by this Bylaw;
 - iv) rental of non-motorized outdoor recreation equipment;
 - v) personal service use;
 - vi) professional practice; and
 - vii) office.

- b) Despite Section 3.3.12 a), the following activities are prohibited as a home based business:
 - i) animal breeding in excess of two litters per calendar year;
 - ii) dog boarding;
 - iii) public assembly use;
 - iv) school pursuant to the **Schools Act**;
 - v) chemical processing;
 - vi) dry cleaning;
 - vii) slaughtering;
 - viii) butchering;
 - ix) smoking of food;
 - x) seafood processing;
 - xi) canning of foods with a pH level equal to or greater than 4.5;
 - xii) laundries;
 - xiii) manufacturing of fiberglass, pyroxlin or similar products;
 - xiv) paint, varnish, or lacquer manufacturing;
 - xv) primary processing including the processing of fence posts, shakes, and firewood;
 - xvi) rubber manufacturing;
 - xvii) tanneries;
 - xviii) funeral parlour;
 - xix) warehousing, specifically including mini-storage;
 - xx) marshalling of vehicles, equipment, and machinery;
 - xxi) vehicle wrecking or dismantling of vehicles;
 - xxii) spray painting shop;
 - xxiii) recycling facility;
 - xxiv) recreation facility;
 - xxv) sale of food and/or beverages for immediate consumption on or off the premises by an individual or household, and specifically including fast food outlets, neighbourhood pubs and restaurants, but not including breakfast

¹ Bylaw No. 500.270, adopted November 13, 2001

- served by a bed and breakfast to the traveling public who have been provided with overnight accommodation;¹
- xxvi) taxidermy;
 - xxvii) dispensing of automotive fuel, oil, or fluids;
 - xxviii) automotive repairs, vehicle restoration or maintenance except on parcels zoned Rural 1 to 4 (RU1-RU4) and Rural 6 to 9 (RU6-RU9) and Resource Management 1 to 5 (RM1-RM5) and Resource Management 7 to 9 (RM7-RM9);
 - xxix) medical marihuana production.²
- c) A home based business must:
- i) be conducted by the permanent residents of the parcel on which the home based business activity is located;
 - ii) be accessory to the residential use of the parcel;
 - iii) not change the outside appearance of the premises or create other visible evidence of its existence, other than one sign;
 - iv) be registered with the Regional District of Nanaimo Business Registry;
 - v) create no noise, vibration, glare, fumes, odours, dust, or smoke detectable off the parcel to the normal senses;
 - vi) be wholly contained within the dwelling unit, garage, and/or accessory building(s), except for outdoor play areas for child care facilities; and
 - vii) provide off street parking on the parcel for all non-resident employees.
- d) A maximum of one (1) non-illuminated home based business sign per parcel is permitted, provided that the sign:
- i) does not exceed .75m² in sign face area;
 - ii) is displayed on the exterior wall face of a dwelling unit, accessory building or fence, or as a free standing sign;
 - iii) if freestanding, does not exceed 1.5 metres in height;
 - iv) if freestanding, is sited within required setbacks of the applicable zone.
- e) A maximum of one non-resident home based business employee is permitted per parcel or the part time equivalent thereof.
- f) Despite subsection e), a maximum of two non-resident home based business employees are permitted per parcel in all Residential 2 (RS2) zones, in Rural 1 to 4 (RU1-RU4), Rural 6 to 9 (RU6-RU9) zones, Resource Management 1 to 5 (RM1-5) and Resource Management 7 to 9 (RM7-RM9) zones.
- g) The location of a home based business is as follows:
- i) For Residential 1 (RS1) parcels less than 2000 m² in area, all Residential 3 (RS3) parcels, and all Rural 5 (RU5) parcels, a home based business must be contained within the dwelling unit or attached garage, with the exception of outdoor play areas for child care facilities.
 - ii) In all other zones where a home based business is a permitted use, the home based business must be contained within the dwelling unit, attached garage

¹ Bylaw No. 500.286, adopted August 13, 2002

² Bylaw No. 500.387, adopted February 11, 2014

or accessory buildings(s), with the exception of outdoor play areas for child care facilities.

- h) The maximum allowed home based business floor area is as follows:
 - i) On Residential 1 (RS1) parcels less than 2000 m², all Residential 3 (RS3) parcels, and Rural 5 (RU5) parcels, the home based business floor area must not exceed 49% of the combined total floor area of the dwelling unit and attached garage to a maximum of 100 m².
 - ii) On Residential 1 (RS1) parcels greater than or equal to 2000 m² and all Residential 2 (RS2) parcels, the home based business floor area must not exceed 49% of the combined total floor area of the dwelling unit and attached garage to a maximum of 100 m², or a maximum of 100 m² combined total for dwelling unit, attached garage, and/or accessory building(s).
 - iii) On Rural 1 to 4 (RU1-RU4) and Rural 6 to 9 (RU6-RU9) parcels and Resource Management 1 to 5 (RM1-RM5) and Resource Management 6 to 9 (RM6-RM9) parcels, the home based business floor area must not exceed 49% of the combined total floor area of the dwelling unit and attached garage to a maximum of 150 m² or a maximum of 150 m² combined total floor area for the dwelling unit, attached garage, and/or accessory building(s).
- i) Home Based Business shall not be permitted within a secondary suite nor by the occupants of a secondary suite elsewhere on the subject property.
- j) Bed and Breakfast shall not be permitted on a parcel that contains a suite.
- k) Where a secondary suite is located on a parcel less than 4,000 m² in area, the Home Based Business must:
 - i) be limited to one (1) business; and,
 - ii) not include any non-resident home based business employees.¹
- 13) For Electoral Area 'G' only, the minimum required setback for all buildings and structures adjacent to the Vancouver Island Highway No. 19 shall be the minimum setbacks prescribed in each zone or 15.0 metres, whichever is greater.²

14) **Farm Use Regulations³**

On lands located within the Agricultural Land Reserve the following activities are permitted farm uses in accordance with the *Agricultural Land Reserve Use, Subdivision and Procedure Regulation* and are subject to the following regulations:

¹ Bylaw No. 500.389, adopted May 27, 2014

² Bylaw No. 500.360, adopted January 25, 2011

³ Bylaw No. 500.383, adopted June 25, 2013

a) **Agri-Tourism**

Agri-tourism activities, other than accommodation, are permitted on land located within the Agricultural Land Reserve that is classified as ‘farm’ under the *BC Assessment Act*, if the use is temporary and seasonal, and promotes or markets farm products grown, raised or processed on the farm.

b) **Farm Retail Sales**

Farm retail sales is permitted on land located within the Agricultural Land Reserve if:

- i) All of the farm product offered for sale is produced on the farm on which the retail sales are taking place, or
- ii) At least 50% of the retail sales area is limited to the sale of farm products produced on the farm on which the retail sales is taking place and the total area, both indoors and outdoors, used for the retail sales of all products does not exceed 300 m².

c) **Medical Marihuana Production¹**

Medical Marihuana Production is permitted on land located within the Agricultural Land Reserve if:

- i) The production of medical marihuana is contained wholly within licensed facilities as permitted by the *Marihuana for Medical Purposes Regulation (MMPR)*.
- ii) The minimum setback for all structures associated with medical marihuana production is 30.0 metres from all property lines.

15) **Agri-Tourism Accommodation²**

a) As exceptions to Section 3 of the *Agricultural Land Reserve Use, Subdivision and Procedure Regulation*, on parcels within the Agricultural Land Reserve and where agri-tourism accommodation is a permitted accessory use, the following general provisions apply:

- i) Agri-tourism accommodation use must be for rental only;
- ii) Agri-tourism accommodation is permitted only on land classified as ‘farm’ under the *BC Assessment Act*;

¹ Bylaw No. 500.387, adopted February 11, 2014

² Bylaw No. 500.383, adopted June 25, 2013

- iii) A maximum of ten (10) agri-tourism accommodation sleeping units including seasonal campsites, seasonal cabins or short term use of bedrooms within a dwelling unit are permitted in accordance with the *Agricultural Land Commission Act*;
 - iv) The total developed area for an agri-tourism accommodation use, including buildings, landscaping, driveways and parking shall occupy less than five percent (5%) of the total parcel area, in accordance with the *Agricultural Land Commission Act*.
- b) An agri-tourism accommodation campground must be developed in accordance with the following regulations:
- i) Every campsite shall be unpaved and not exceed 150 m² in area;
 - ii) Washroom and drinking water facilities shall be provided for in accordance with the Vancouver Island Health Authority's regulations and/or provincial regulations;
 - iii) A maximum consecutive or non-consecutive stay of ninety (90) calendar days per visitor within any twelve (12) month period within any campsite on the parcel. The relocation of recreational vehicle (RVs) or campers to other sites within the parcel does not constitute the start of a new stay.
- c) An agri-tourism accommodation cabin must be developed in accordance with the following regulations:
- i) The maximum gross floor area of an agri-tourism accommodation cabin shall not exceed 50 m²;
 - ii) Washroom and drinking water facilities shall be provided for in accordance with the Vancouver Island Health Authority's regulations and/or provincial regulations;
 - iii) A maximum of one kitchen facility shall be permitted within each agri-tourism accommodation cabin;
 - iv) A maximum consecutive or non-consecutive stay of ninety (90) days per visitor in any twelve (12) month period within any cabin on the parcel. The relocation of a visitor to another cabin within the parcel does not constitute the start of a new stay;
 - v) One (1) parking space per agri-tourism accommodation cabin is required.

16) **Secondary Suites**

- a) Secondary suites shall be permitted in the following zone classifications: RS1, RS1.1, RS2, and RU1 – RU10 (Inclusive).
- b) A maximum of one (1) secondary suite is permitted per single dwelling unit to a maximum of two (2) per parcel of which only one (1) may be detached.
- c) Notwithstanding Section 2.1, a secondary suite shall be permitted within an accessory building.

- d) Secondary Suites shall be subject to the following requirements:
- i) secondary suites within a principal dwelling unit must not exceed 40% of the habitable floor space of the building that it is located in nor 90 m² of total floor space, whichever is lesser;
 - ii) must not be located within a duplex, manufactured home, or multiple dwelling unit development;
 - iii) must provide at least two (2) additional designated off-street parking spaces (at least one (1) must have direct access to the street);
 - iv) shall be maintained in the same real estate entity as the principal dwelling unit to which it is accessory;
 - v) must meet minimum setback requirements for a dwelling unit located in the applicable Zone Classification.
 - vi) must be limited to a maximum of two bedrooms and one cooking facility;
 - vii) must, on parcels without community sewer services, have the approval of the local Health Authority with respect to the provision of sewage disposal;
 - viii) must have its own entrance separate from that of the principal dwelling unit; and,
 - ix) must not be used for short term (less than one month) rentals.
- e) A Secondary Suite may be located within an accessory building subject to the following:
- i) The minimum site area requirement shall be 800 m² for parcels serviced with community water and community sewer or 8,000 m² in all other cases.
 - ii) Notwithstanding any other provision in this Bylaw, the maximum height of a building containing a suite shall be 8.0 metres;
 - iii) The maximum floor area of an accessory building containing a secondary suite shall not exceed 40% of the habitable floor space of the principal dwelling unit which it is associated with nor 90 m² of total floor space, whichever is lesser.
 - iv) the secondary suite shall contain no interior access to any part of the accessory building and the means of access and egress must be external to the structure.
- f) Home Based Business shall be in accordance with Section 3.3.12.
- g) Despite any regulation in this Bylaw, land established as “Agricultural Land Reserve” pursuant to the ***Agricultural Land Reserve Act*** is subject to the ***Agricultural Land Reserve Act*** and ***Regulations***, and applicable orders of the Land Reserve Commission.

3.4 Regulations for Each Zone

For detailed regulations respecting each zone see Sections 3.4.11 to 3.4.126 in the following pages.

Section 3.4.1

AGRICULTURE 1¹

AG1

3.4.1.1 Permitted Uses and Minimum Site Area

Required Site Area with:

Permitted Principal Uses	Community Water & Sewer System	Community Water System	No Community Services
a) Agriculture	n/a	n/a	n/a
b) Aquaculture	5000 m ²	5000 m ²	5000 m ²
c) Residential Use	n/a	n/a	n/a
d) Silviculture	n/a	n/a	n/a

Permitted Accessory Uses

- a) Agri-tourism Accommodation
- b) Home Based Business

3.4.1.2 Maximum Number and Size of Buildings and Structures

Agri-tourism accommodation cabins	combined floor area of 500 m ²
Accessory buildings	combined floor area of 400 m ²
Dwelling units/parcel	
iii) on a parcel having an area of 2.0 ha or less	1
ii) on a parcel having an area of 2.0 ha or more	2
Height	9.0 m
Parcel coverage	25%

3.4.1.3 Minimum Setback Requirements

Buildings and structures for housing livestock or for storing manure	
All lot lines	30.0 m
All other buildings and structures	
All lot lines	8.0 m

3.4.1.4 Other Requirements

Agri-tourism accommodation shall be developed in accordance with Section 3.3.15 of “Regional District of Nanaimo Land Use and Subdivision Bylaw No. 500, 1987.”

Despite any regulation in this Bylaw, land established as “Agricultural Land Reserve” pursuant to the **Agricultural Land Reserve Act** is subject to the **Agricultural Land Reserve Act** and **Regulations**, and applicable orders of the Land Reserve Commission.

COMMERCIAL 8 continued

3.4.19.5 Other Regulations

For the purpose of this zone:

- a) In this zone Campground Use means the use of a parcel for providing temporary accommodation for travelers who stay no more than 60 days in a calendar year using tents or recreational vehicles, but specifically excludes a mobile home park or hotel. The following uses shall be permitted in conjunction with and accessory to a campground use: retail sales up to a maximum of 100 m² of floor area, public assembly, non-motorized recreational vehicle rentals, concession stand, and recreational use.
- b) Non-Motorized Recreational Vehicle Rentals means the use of land, and or a building or structure not exceeding a maximum floor area of 100 m² for the purpose of renting non-motorized recreational vehicles and equipment and may include accessory guiding and lessons.
- c) Concession Stand means the use of a building or structure not exceeding 15 m² in floor area not including outdoor eating and sitting areas for the sale of food and beverages to be consumed on the subject property, but specifically excludes neighbourhood pub and fast food outlet.
- d) Recreational Use means the use of land for the conduct of outdoor sports and outdoor leisure activities which may include accessory buildings and structures in association with a recreational use.
- e) Intensive Agricultural Uses including feed lot, fur farm, mushroom farm, horse boarding stable, and intensive swine operation are not permitted in this zone.
- f) All Recreational Vehicles shall be licensed for use on public roads, have wheels, have no structural skirting, and have no associated decks, patios, additions, or other structural improvements.
- g) The 200 year designated flood level shall be determined by interpretation of the "Province of British Columbia, Ministry of Environment – Water Management Branch Floodplain Mapping - Englishman River, drawing number 83-23-1,1980" and may be groundtruthed by a registered hydrologist or geotechnical engineer qualified to determine site specific flood construction levels to determine building-site specific flood construction levels.

Section 3.4.107

**HORNE LAKE COMPREHENSIVE
DEVELOPMENT ZONE 9¹**

CD9

3.4.107.1 Permitted Uses

- a) Recreational Residence
 - b) Recreational Vehicle Storage Area
-

3.4.107.2 Maximum Number and Size of Buildings Structures and Uses

- a) The maximum number of recreational residences permitted within the area as shown outlined on plan contained in Schedule CD9 'A', shall be:
 - i) 400, where the regional park amenity referred to in subsection (f)² is provided to the regional district; or
 - ii) 2, where the regional park amenity has not been provided.
- b) Number of recreational residences per bare land strata lot - 1
- c) Floor Area:
 - i) cabin – 70 m² subject to subsections 3.4.107.6 (a)(xi) and 3.4.107.6 (a)(xiii)
 - ii) visitor recreational vehicle – 37m²
 - iii) accessory buildings - one 10 m² and one 6 m² for each recreational residence
 - iv) accessory water storage structure – 6.0m² for each recreational residence ³
 - v) accessory wood storage structure – 6.0m² for each recreational residence ⁴
- d) Height (recreational residence):
 - i) cabin – 6.1 m
 - ii) accessory buildings and structures - 3.0m
 - iii) accessory water storage structure – 3.0m excluding water container ⁵
 - iv) accessory wood storage structure – 3.0m ⁶
- e) Storeys
 - i) The maximum number of storeys contained within a cabin must not exceed 2.
 - ii) Where 2 storeys are provided within a cabin either the floor area of the storey with the highest elevation does not exceed 50% of the floor area of the lower storey not including internal stairways or the floor area of the storey with the lower elevation must not exceed 50% of the floor area of the upper storey. ⁷
- f) The Regional park amenity is the transfer to the Regional District of the lands legally described Block 40, Alberni District, Plan 691N, Except That Part Thereof Shown Outlined in Red on Plan 1339R and except That Part in Plan 46603 in substantially the same condition as such lands were as of May 31, 2001, to be operated and maintained by or on behalf of the Regional District as regional park.

**HORNE LAKE COMPREHENSIVE
DEVELOPMENT ZONE 9 continued**

3.4.107.3 Minimum Parcel Size

Despite Section 4.1 and 4.4.4 of this bylaw, the following subdivision regulations apply:

- a) Maximum number of bare land strata lots that may be subdivided within the CD9 zone – 400
-

3.4.107.4 Minimum Setback Requirements

All watercourses, except Horne Lake	15.0 m from the natural boundary or where a bank is within 15 metres of the natural boundary, 15.0 m from the top of the bank, whichever is greater.
Horne Lake	8.0 m from the natural boundary as shown on the survey plan prepared by Bruce Lewis, BCLS and dated March 15, 2000.
Interior side lot line	1.5 m
Rear lot line	1.5 m
All other lot lines	5.0 m

3.4.107.5 Flood Control¹

- a) The following Lands are designated flood plain:
 - i) That part of Strata Lots 1 through 400, of District Lot 215, Alberni District, Plan VIS5160, Below 121.7 metres Geodetic Survey of Canada Datum.
- b) Despite the designation of the Horne Lake Lands as floodplain and the restrictions contained in subsection (a), a person may construct a permitted minor addition to a building in the Horne Lake Comprehensive Development Zone.
- c) Within the Horne Lake flood plain “a permitted minor addition” means one addition to a cabin located in the Horne Lake Comprehensive Development Zone having an area, which is the lesser of:
 - i) 25% of the floor area of the main floor of the cabin; or
 - ii) 10m²Provided the main floor area of the cabin does not exceed the maximum floor area of 70m² as specified in Section 3.4.107(b)(i) after the one addition.

¹ Bylaw No. 500.314, adopted January 10, 2006

HORNE LAKE COMPREHENSIVE DEVELOPMENT ZONE 9 continued

3.4.107.6 Other Regulations

- a) For the purposes of this zone:
- i) *“recreational residence”* means one cabin, or one cabin and one visitor recreational vehicle
 - ii) *“cabin”* means a building or recreational vehicle used for the temporary accommodation of one or more persons;
 - iii) *“visitor recreational vehicle”* means a tent or one recreational vehicle other than a mobile home located within 100 metres of a cabin, which provides for the accommodation of persons visiting the occupants of the cabin;
 - iv) a visitor recreational vehicle for a given cabin may be located on site for no more than 4 consecutive days within a week with the exception that one visit within a calendar year may extend up to 90 consecutive days;
 - v) *“temporary accommodation”* means the occupation of a cabin for fewer than 180 consecutive days in a calendar year and fewer than 240 days in total during the same calendar year;
 - vi) *“recreational vehicle storage”* means the storage of vehicles used for temporary seasonal accommodation during the periods of time when such vehicles are not in use.
 - vii) No more than 2.0235 hectares (5 acres) of land within the Horne Lake Comprehensive Development Zone 9 shall be used for recreational vehicle storage.
 - viii) The area of land used for recreational vehicle storage shall form one contiguous area and vehicle storage shall not take place in different locations within this zone.
 - ix) The area of land used for recreational vehicle storage shall not be closer than 30 metres from the natural boundary of Horne Lake, 30 metres from the top of a bank adjacent to a watercourse and 5 metres from any other lot line.
 - x) *“storey”* means that portion of a building situated between the top of any floor and the top of the floor next above it, and if there is no floor above it, that portion between the top of the floor and the ceiling above.
 - xi) up to 35m² floor area that is located on a second storey is permitted in addition to the maximum floor area specified in 3.4.107.2(c)(i),¹ not including internal stairways;
 - xii) *“porch”* means a roofed open structure projecting from the exterior wall of a building and having at least 30% of the total areas of the vertical planes forming its perimeter, other than the exterior wall of the building, unobstructed in any manner except by insect screening;
 - xiii) up to 40 m² of floor area used for porches and decks² attached to a cabin is permitted in addition to the maximum floor area specified in 3.4.107.2c) i)³ provided the combined lot coverage “footprint” of the cabin, porch, deck or hard surfaced patio, other than a permitted minor addition of 10 m², does not exceed 93 m² within a setback of 15 metres from the natural boundary of Horne Lake;

¹ Bylaw No. 500.314, adopted January 10, 2006

² Bylaw No. 500.314, adopted January 10, 2006

³ Bylaw No. 500.314, adopted January 10, 2006

**HORNE LAKE COMPREHENSIVE
DEVELOPMENT ZONE 9 continued**

- xiv) Despite section 3.4.107.2 d)¹ i)², a cabin may be up to 8.0 metres in height, where the difference in height between 8.0 metres and 6.1 metres arises from the construction of raised foundations or other construction which does not enclose habitable or occupiable storage space;
 - xv) The keeping of animals for agricultural purposes is not permitted in this zone.
 - xvi) The height of a raised foundation, as set out in subsection (xiv) shall be determined by average natural grade of the footprint of the recreational residence excluding decks and porches;³
 - xvii) The floor area of the storey with the loft (upper or lower), as set out in subsection 3.4.107.2(e)(ii), is calculated exclusive of the portion of the floor area where the height to ceiling is 1.0 metre or less;⁴
 - xviii) Where a lower loft is being constructed the maximum height of the recreational residence shall not exceed 6.1 metres as measured from the lowest point of natural grade;⁵
 - xix) *“accessory water storage structure”* means an unenclosed structure used exclusively for supporting or containing an individual private water supply and may include a container or tank;⁶
 - xx) *“accessory wood storage structure”* means a three sided structure used exclusively for the storage of wood.⁷
- b) In the event of inconsistency between any provision of Section 3.4.107 and any other provision of this Bylaw, the Section 3.4.107 provision will apply and the other provision will not apply to the extent of the inconsistency.

3.4.112.1 Permitted Uses, Density, and Park Amenity

Permitted Uses

- a) Residential Use
 - b) Home Based Business Use
 - c) Agriculture use, within that part of the zone within the ALR
-

Density and Park Amenity

- a) The maximum number of parcels that may be created by subdivision within the area as shown outlined on Schedule No. 2 of the CD 14 zone shall be:
 - i) 158 where the Regional Park amenity referred to in section b) of Section 3.4.112.1 is provided to the Regional District; or
 - ii) 36 parcels where the Regional Park has not been provided.
- b) The Regional Park amenity is the transfer of the following portions of the lands legally described as the Remainder of Block 564, Nanoose District, Except That Part Shown Outlined in Red on Plan 613-R and Except Parts in Plans 360RW, 3132RW, 31833, 39893, 42873, VIP66068, VIP67422, VIP69511 and VIP71158 (The Remainder of Block 564, Nanoose District) for Regional Park:
 - i) A greenway corridor not less than 15.0 metres in width linking a minimum of one (1) accessible location from the top of the bank of the Englishman River to the two (2) locations where Craig Creek crosses the lands and to the location of the unnamed wetland located near the south boundary of the lands;
 - ii) The Craig Creek Corridor and that part of the land east and south of Craig Creek situated west of the Island Highway, including the Bed of the Creek and a minimum 30.0 metres as measured from the top of the bank of the Creek;
 - iii) That portion of land located between DL 57, Nanoose District and the Island Highway that includes all of the area 200 metres south of the Remainder of DL 40 Nanoose District;
 - iv) That portion of land located between the east boundary of DL 57, Nanoose District and the top of the bank of the Englishman River Valley;
 - v) A 30.0-metre wide strip of land located adjacent to the west side of the Island Highway from the south boundary of the Remainder of DL 40, Nanoose District to Kaye Road; and
 - vi) A 30.0 metre wide strip of land located west of that portion of Lot 1, Block 564 and DL 171 Nanoose District Plan VIP71158 that fronts the Island Highway.

COMPREHENSIVE DEVELOPMENT ZONE 20**

CD20¹

3.4.120.1 Permitted Uses and Density

Permitted Uses

- a) Residential Use
 - b) Accessory buildings and structures for each mobile home and the Mobile Home Park
-

3.4.120.2 Maximum Number and Size of Buildings and Structures

The maximum number of dwelling units shall be:

- i) 29 Mobile homes and 6 RV sites
- ii) Mobile homes shall not exceed a maximum footprint width of 4.5 metres except that 5 mobile homes may have a maximum footprint width of 7.5 metres

The maximum number of accessory buildings shall be:

- i) 1 accessory building per mobile home not exceeding a floor area of 10 m²
- ii) Mobile home accessory building height shall not exceed 3.0 metres
- iii) Common accessory buildings shall not exceed a combined maximum floor area of 200 m²
- iv) Common accessory buildings height shall not exceed 6.0 metres

The maximum number of porch/deck additions shall be:

- i) 1 porch/deck addition per mobile home not exceeding a floor area of 20 m² excluding wheel chair ramps
 - ii) 1 entrance stairs to a secondary access not exceeding a floor area of 2 m²
-

3.4.120.3 Minimum Setback Requirements

- a) All buildings and structures
 - Exterior lot line 5.0 metres
 - Interior lot line 2.0 metres
- b) Except where any part of a parcel is adjacent to or contains a watercourse then the regulations in Section 3.3.8 shall apply.
- c) All buildings/ structures or mobile homes – 3.0 metres from adjacent mobile home or building/structure

¹ Bylaw No.500.311, adopted June 13, 2005

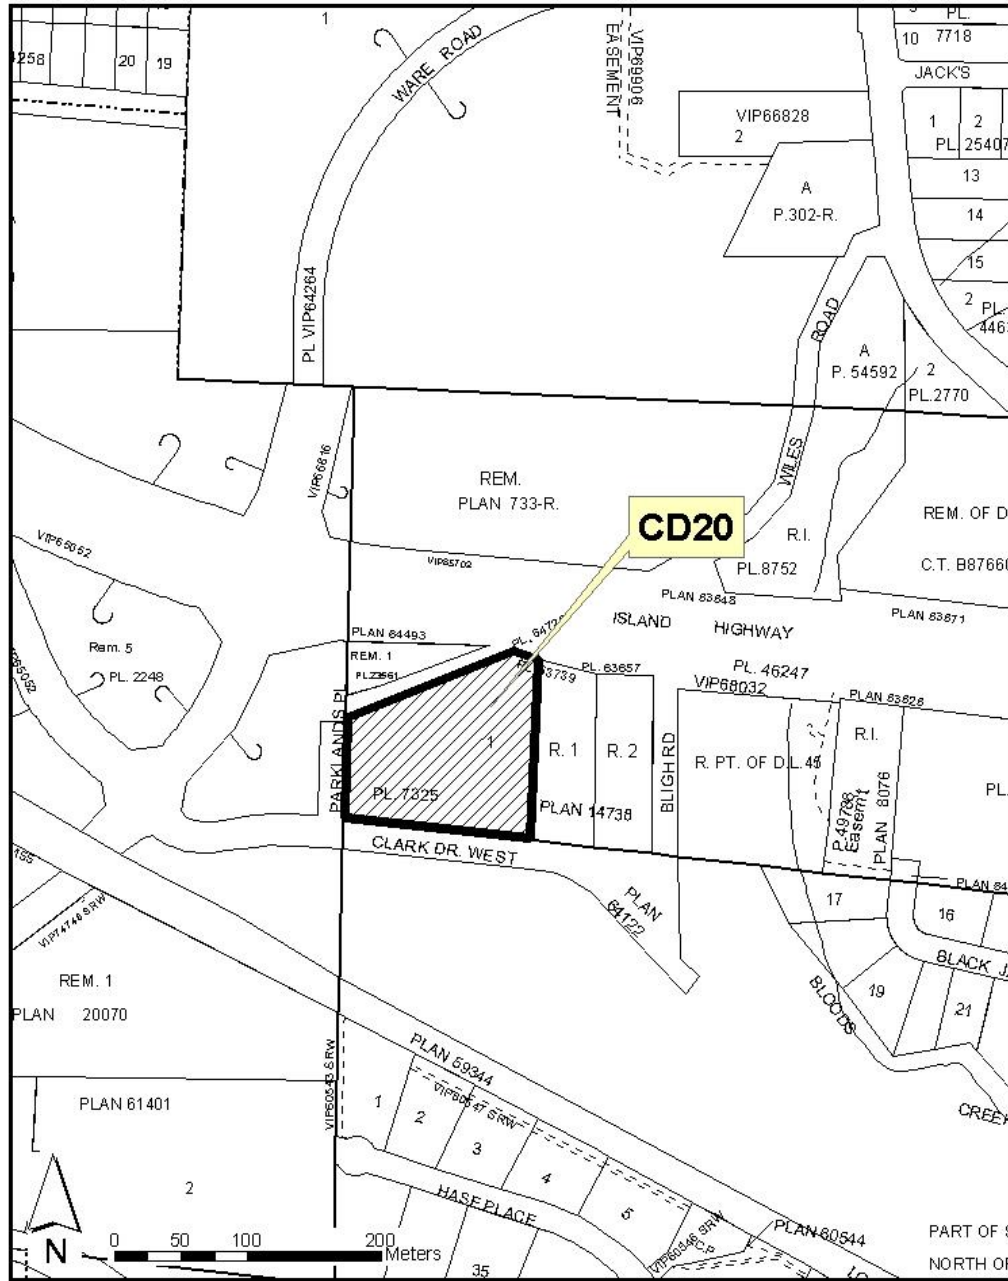

COMPREHENSIVE DEVELOPMENT ZONE 20 continued

3.4.120.4 Other Regulations

For the purpose of this zone:

- a) Mobile Homes
 - i) No new additions shall be constructed for habitable space
 - ii) No carports or enclosed garages are permitted
 - iii) Any porch/deck or entrance addition shall be structurally supported Independent of the mobile home and shall have a building permit.
- b) Recreational Vehicles shall
 - i) Be licensed and have wheels
 - ii) Have no structural skirting
 - iii) Have no structural decks or additions
- c) Porch is defined as a structure abutting a mobile home having a roof but with walls that are open and unenclosed to the extent of at least 50% thereof and is constructed on piers or a foundation above grade for use as an outdoor living area
- d) Deck is defined as a structure abutting a mobile home with no roof or walls except for visual partitions and railings and is constructed on piers or a foundation above grade for use as an outdoor living area

¹ Bylaw No. 500.318, adopted September 20, 2005

**HORNE LAKE REGIONAL PARK
COMPREHENSIVE DEVELOPMENT ZONE continued**

3.4.124.4 Minimum Setback Requirements

- a) Buildings and structures for housing livestock or for storing manure
 - i) All lot lines 30.0 metre
 - ii) Horne Lake 30.0 metre natural boundary
 - iii) Qualicum River 30.0 metre natural boundary
 - iv) Internal access roads 3.0 metre
 - b) All other buildings, structures, camp sites, campground services (internal roads, parking, water, and waste disposal systems)
 - i) All lot lines 8.0 metre
 - ii) Horne Lake 30.0 metre natural boundary
 - iii) Qualicum River 30.0 metre natural boundary
-

3.4.124.5 Flood Control

- a) The following lands are designated flood plain:
 - i) Block 40, Alberni District, Plan 691N, except that part thereof shown outlined in red on Plan 1339R and except that part in Plan 46603
 - ii) Part of Block 40, Alberni District, Plan 1339R
 - b) The flood construction elevation shall be 121.7 metres Geodetic Survey of Canada for any permanent building.
-

3.4.124.6 Campground Layout Standards

- a) Individual Camp Sites
 - i) Every camp site shall have a minimum area of not less than 110m².
 - ii) Every camp site shall have a maximum slope of five percent.
 - iii) No camp site shall be located within:
 - 01. 3.0 m of another camp site; and
 - 02. the setback areas established pursuant to Part 3.4.124.4 of this Bylaw.
 - iv) Each individual camp site shall have one conveniently located parking space adjacent to the internal access road and may be sited in the area allotted for the 3.0 m internal road access setback.
 - v) No recreation vehicle or tent shall be located elsewhere in a campground than on a camp site or group camp site.
 - vi) No more than one camping party shall be permitted in one camp site.
- b) Group Camp Area
 - i) A maximum of 3 group camping areas with a combined area of 3.0 ha is permitted.
 - ii) A maximum of 75 camping parties are permitted in the 3 group camping areas.
 - iii) A maximum of 2 vehicles per camping party may park within the group camping area.

**HORNE LAKE REGIONAL PARK
COMPREHENSIVE DEVELOPMENT ZONE continued**

- iv) Each group camp area shall have a minimum of a 5 m wide vegetated buffer.
 - v) Each group camping area shall have a centralized fire pit.
 - vi) Each group camp area shall have a maximum slope of five percent.
 - vii) No recreation vehicle or tent shall be located elsewhere in a campground than on a group camp site.
 - viii) No group camp site shall be located within:
 - 01. 3.0 m of another camp site; and
 - 02. the setback areas established pursuant to Part 3.4.124.4 of this Bylaw.
- c) Buffer Area
- i) Day use recreation is permitted within the setback pursuant to subsection 3.4.124.4b. ii.
- e) Internal Access Roads
- i) All internal access roads shall be of hard durable surface so as not to produce dust.
 - ii) The minimum internal access road width shall be 6.0 metres
 - iii) Dead-end internal access roads and cul-de-sacs shall have a turning radius of 12.0 metres.
- f) Group, Day Use and Trailer Parking
- i) These requirements do not apply to parking spaces pursuant to 3.4.124.6.a.iv and 3.4.124.6.b.iii
 - ii) A minimum of 100 parking spaces shall be provided.
 - iii) Parking stall and aisle dimensions shall be in accordance with Schedule '3B' Table 2 of this Bylaw.
 - iv) A minimum of 10 disability parking spaces shall be provided.
 - v) Each disability space shall be:
 - 01. a minimum of 4.0 metres wide
 - 02. marked with the International Symbol of Accessibility
 - 03. located adjacent to the day use area within convenient access of the development, building, or use that it is intended to serve, and any level change shall not exceed 13 mm
 - vi) A minimum of 50 boat trailer parking spaces shall be provided for boat launch patrons once the number of camping parties exceeds 100. Each boat trailer parking space shall:
 - 01. enable the vehicle to pull thru; and
 - 02. be a minimum length of 11 m.
 - vii) All parking spaces shall be clearly delineated.
 - viii) All parking spaces shall be provided and maintained with a hard durable surface that does not produce dust and is permeable.
 - ix) All parking spaces shall have a maximum gradient and cross-slope of 6%.

**HORNE LAKE REGIONAL PARK
COMPREHENSIVE DEVELOPMENT ZONE continued**

3.4.124.7 Campground Servicing

- a) Washroom Facilities:
 - i) Shall be located in a separate building(s); and
 - ii) Shall be located:
 - 01. a maximum of 150 m from any individual camp site or group camping area;
 - 02. a minimum of 4.5 m from any camp site;
 - 03. a minimum of 15 m from any drinking water source or surface water;
 - 04. a minimum of 3 m from any building, internal access road or water supply pipe, and
 - iii) Shall be established as outlined in Table No. 1; and
 - iv) Where holding tanks are utilized for toilets they shall be sealed and have a minimum capacity 200 gal.
 - v) A minimum of 2 toilets (1 male and 1 female) shall be wheelchair accessible and located adjacent to the primary day use area.
 - vi) A minimum of 2 wash basins and 2 shower (1 male and 1 female) shall be wheelchair accessible.

Table No. 1

Number of potential camping parties	Toilets		Wash basins		Showers	
	Female	Male	Female	Male	Female	Male
1 - 75	10	10	0	0	0	0
76 – 120	12	12	2	2	2	2
121 – 200	14	14	4	4	6	6

- b) Sewage Disposal Station (Sani-dump)

One sewage disposal station for use by recreational vehicles shall:

 - i) be established once the number of potential camping parties exceeds 100
 - ii) be located:
 - 01. in the North park ;
 - 02. a maximum of 150 m from any individual camp site or group camping area;
 - 03. a minimum of 4.5 m from any camp site;
 - 04. a minimum of 15 m from any drinking water source or surface water; and
 - 05. a minimum of 3 m from any building, internal access road or water supply pipe.
- c) Water System

Potable water source shall be provided once the number of potential camping parties exceeds 75.
- d) Garbage Disposal and Recycling
 - i) Large communal garbage and recycling facilities shall be centrally located in the North and South Park;
 - ii) Small garbage and recycling receptacles shall be located in all day use areas; and
 - iii) All garbage and recycling facilities and receptacles shall be animal and insect proof.

**HORNE LAKE REGIONAL PARK
COMPREHENSIVE DEVELOPMENT ZONE continued**

3.4.124.8 Other Regulations

For the purpose of this zone:

- i) “Adventure Camp” means an outdoor wilderness recreation program area including one group camping area.
- ii) “Camp site (Individual)” means an area within a campground used by one camping party for tents or recreational vehicles.
- iii) “Camping Party” means a maximum of eight (8) persons including no more than four (4) adults, an adult being a person 16 years of age or over.
- iv) “Day Use Recreation” means an area consisting of largely of open space, which may include picnic area, playground, gazebo, docks and wharves, or similar use but shall not include a campground.
- v) “Group Camping Area” means an area used for camping by three or more camping parties and shall include the Adventure Camp.
- vi) “Outdoor Wilderness Recreation” means a recreational activity undertaken where the outdoor setting and natural landscape is a significant element in the activity, where there is no significant alteration of the land, where there is no hydro service, and the density of recreational users is not a significant element and includes obstacle course, zip line course, orienteering, horse boarding and trail rides, trails, day use recreation.
- vii) “Temporary accommodation” means the occupation of a camp site to a maximum of 28 days in total per year by any one camping party.
- viii) “Tourist accommodation” means a one-storey building with a heat source and with no provision for cooking, sanitation or permanent residential occupancy.
- ix) “Tourist Store” means a detached accessory building or portion of an accessory building that sells supplies and pre-packaged dry goods catering to park users and specifically prohibits the preparation of food.
- x) “Visitor Centre” means a place in a fully enclosed building for the purposes of viewing or displaying information and exhibits related to natural and cultural history, the natural environment, and wilderness recreation, and where such display is intended, in part, to serve the educational and cultural needs of the community as a whole.
- xi) “Washroom facilities” means a building or buildings that contain toilets, washbasins, and heated showers.
- xii) “Wilderness campground” means an area in Horne Lake Regional Park without hydro service that provides for the temporary accommodation of travellers using tents, tent trailers, or recreational vehicles and specifically excludes a mobile home park or hotel

CD26¹

3.4.126.1 Permitted Uses, Density and Park Amenity

Permitted Uses

- a) Agriculture
 - b) Home Based Business
 - c) Residential Use
-

3.4.126.2 Maximum Number and Size of Buildings and Structures

Accessory Buildings	Combined floor area of 400m ²
Dwelling units/parcel	1
Height	9.0 m
Parcel coverage	25%

3.4.126.3 Minimum Setback Requirements

Buildings and structures for housing livestock or for storing manure:

All lot lines	30.0 metres
All other buildings and structures – all lot lines	8.0 metres

Except where any part of a parcel is adjacent to or contains a watercourse then the regulations in section 3.3.8 apply.

3.4.126.4 Minimum Parcel Size

Minimum parcel size 4.0 ha

Despite the minimum parcel size, a maximum of 1 rural parcel may be parcel averaged based on the total size of the parent parcel divided by the number of rural parcels created provided that the total number of rural parcels does not exceed 2 and 1 rural parcel is not less than 1.4 ha in size.

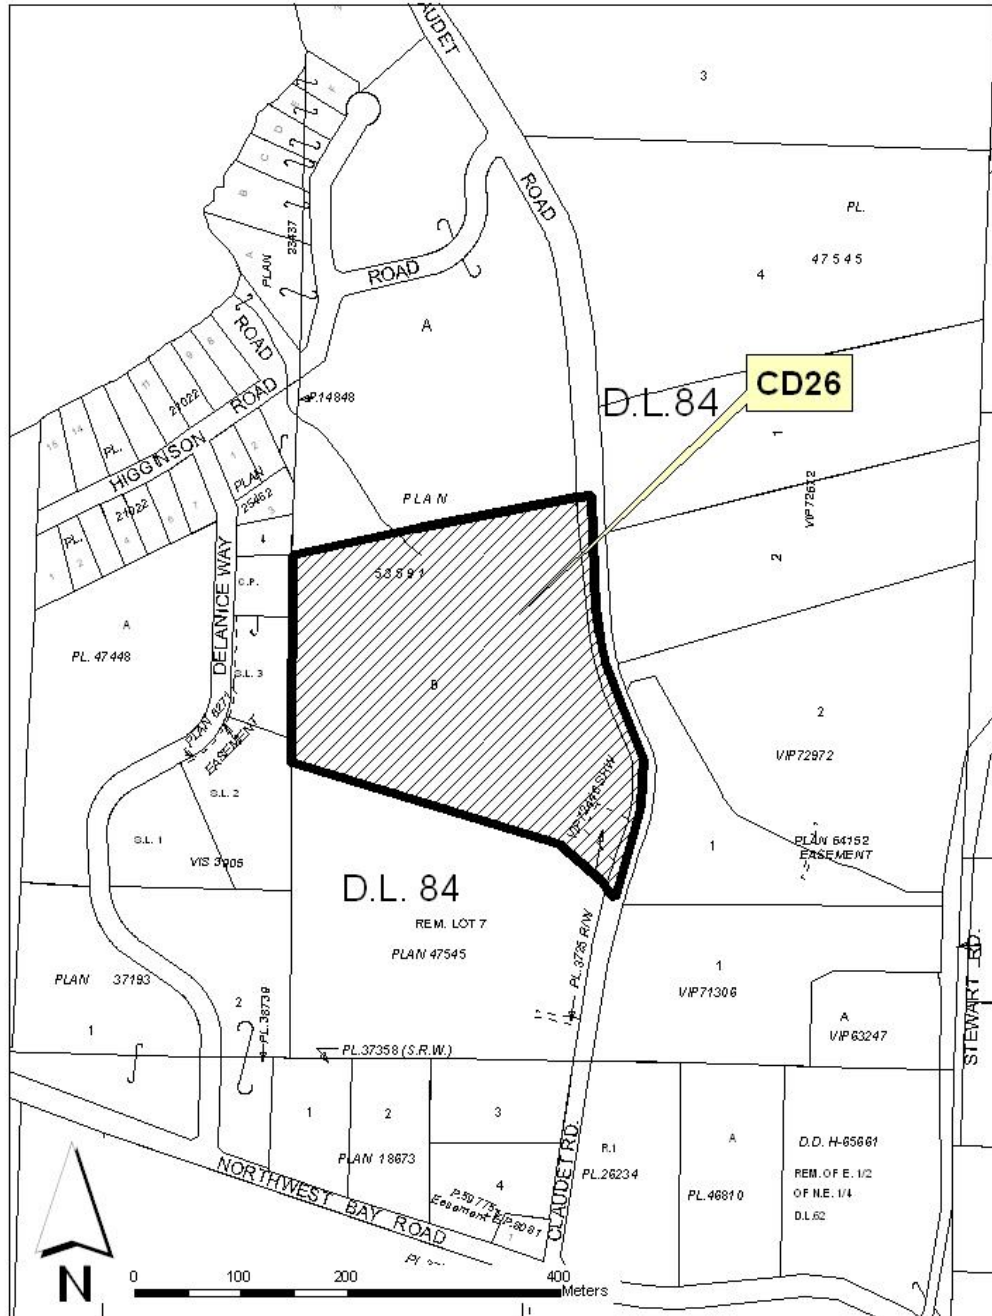

3.4.126.5 Other Regulations

For the purpose of this zone:

- a) Intensive Agricultural Uses including feed lot, fur farm, mushroom farm, horse boarding stable, and intensive swine operation are not permitted in this zone.
- b) Home based business – the regulations set out in section 3.3.12 applicable to the Rural 5 zone apply to this zone.

**SOUTH WELLINGTON LIGHT INDUSTRIAL
COMPREHENSIVE DEVELOPMENT ZONE 28 continued**

3.4.128.6 Other Regulations

For the purpose of this zone:

- a) *Manufacturing Use* means the assembling and manufacturing of a product or products in a building only and may include indoor accessory retail sales of the product(s) produced to a maximum of ten percent (10%) of the floor area of the building and may include an accessory office use.
- b) *Recreational Vehicle Sales or Storage* means the use of land or buildings for the sale or storage of recreational vehicles to a maximum of ten percent (10%) of the area of the parcel and is permitted only in the hatched area as shown in Table No. 1 in Section 3.4.128.7.
- c) *Moving Truck and Moving Trailer Rentals* means the use of land and or buildings for the rental of moving trucks and moving trailers excluding passenger cars and trucks to the general public. The parking of moving trucks and moving trailers is permitted only in hatched area as shown in Table No. 1 in Section 3.4.128.7.
- d) The Recreational Vehicle Sales or Storage area must be clearly separated from the remainder of the parcel and other uses by landscaping and or fencing or combination of the above to create a continuous barrier at least one metre in height, excluding entrances.
- e) The Recreational Vehicle Sales or Storage area must be screened from view along all external property lines with landscaping and or fencing to meet or exceed the following landscaping criteria:
 - i) landscaping shall be provided to the satisfaction of the Regional District of Nanaimo along the perimeter of the Recreational Vehicle Sales and Storage Area, and shall include, a minimum of seventy-five percent (75%) screening from grade level to a height of 3.0 metres and at least twenty-five percent (25%) screening from a height of 3.0 metres to 5.0 metres above grade;
 - ii) provided the overall density of vegetation is provided, landscaping adjacent to Schoolhouse Road may be grouped. No other landscaping on site may be grouped;
 - iii) landscaping shall include planting one evergreen tree for every 3.0 metres of parcel frontage; and
 - iv) all landscaping abutting parking or other vehicle access areas on site shall be protected by a permanent curb a minimum of 15 cm in height to protect landscaping from potential vehicular damage.
- f) The Recreational Vehicle Sales or Storage area and the Moving Truck and Moving Trailer parking area must be clearly separated from the remainder of the parcel and other uses by landscaping and or fencing or combination of the above to create a continuous barrier at least 1.0 metre in height, excluding entrances.
- g) The Moving Truck and Moving Trailer parking area shall be screened from view from South Wellington Road by a vegetated buffer a minimum of 5.0 metres in width.
- h) Except where varied by this zone, landscaping shall be provided in accordance with **Schedule 3F – Landscaping Regulations and Standards of Bylaw No. 500**.
- i) Except for the Recreational Vehicle Sales and Storage and Moving Truck and Moving Trailer Rentals located in the hatched area as shown in Table No. 1 in Section 3.4.128.7, all uses must be fully contained within a building.

CD32¹

3.4.132.1 Permitted Uses

- a) Residential Use
 - b) Temporary Recreational Vehicle Use
 - c) Mobile Home Park
-

3.4.132.2 Maximum Number and Size of Buildings and Structures

- a) The Maximum number and type of dwelling units permitted shall be:
 - i) Nineteen (19) dwelling units, thirteen (13) of which must be mobile homes
 - ii) Mobile homes must not exceed a maximum width of 7.5 metres.
 - iii) The maximum combined floor area of all dwelling units other than mobile homes shall not exceed 340 m²
 - b) The maximum dwelling unit height shall be 8.0 metres.
 - c) The maximum number and type of accessory buildings shall be:
 - i) One (1) accessory building per dwelling unit with a maximum floor area of 10.0 m².
 - ii) Accessory building height shall not exceed 3.0 metres.
 - iii) The maximum combined floor area of all common accessory buildings shall not exceed 100.0 m².
 - iv) Common accessory building height shall not exceed 8.0 metres.
 - d) No building or structure additions are permitted to Mobile Homes, except as follows:
 - i) One (1) porch/deck addition per mobile home not exceeding:
 - a. a maximum floor area of 50.0 m² for existing deck/porch additions, excluding wheel chair ramps, and
 - b. a maximum floor area of 25.0 m² for new decks/porches or additions to existing decks/porches provided the combined total floor area of the deck/porch does not exceed 25.0 m², excluding wheel chair ramps.
 - ii) One (1) set of stairs to a secondary access not exceeding an area of 2.0m².
-

3.4.132.3 Minimum Setback Requirements

- a) All existing buildings and structures:
 - i) Exterior Lot Line: - 2.4 metres
 - ii) North Interior Side Lot Line: - 0.9 metres
 - iii) South and East Interior Lot Lines: - 4.0 metres

¹ Bylaw No. 500.328, adopted April 25, 2006

**HORNE LAKE ROAD COMPREHENSIVE
DEVELOPMENT ZONE 32 continued**

- b) All new buildings or structures, or additions or alterations to existing buildings or structures:
 - i) Exterior Lot Line – 5.0 Metres
 - ii) North Interior Side Lot Line – 2.0 metres
 - iii) South and East Interior Lot Lines: - 4.0 metres
 - c) All buildings and structures must be separated by a minimum of 2.0 metres.
-

3.4.132.4 Other Regulations

For the purpose of this zone:

- a) Temporary Recreational Vehicle Use means the use of land in designated recreational vehicle spaces for use by the traveling public and shall be limited to two (2) Recreational Vehicles only where such vehicles are fully licensed, have wheels, have no structural skirting, and have no associated decks or additions and must not be occupied for a continuous period exceeding three (3) months.
- b) Porch is defined as a structure abutting a mobile home having a roof but with walls that are open and unenclosed to the extent of at least 50% thereof and is constructed on piers or a foundation above ground.
- c) Deck is defined as a structure abutting a mobile home with no roof or walls except for visual partitions and railings and is constructed on piers or a foundation above ground.
- d) No carports or enclosed garages are permitted.

1. For the purpose of this zone, notwithstanding Schedule '3D', Residential Mobile Home Park Regulations and Standards, the number of required parking spaces is 1 space per mobile home plus 10 visitor spaces for the Mobile Home Park.
2. For the purposes of this zone *porch* is defined as a structure abutting a mobile home, having a roof but with walls that are open and unenclosed to the extent of at least 50% thereof and is constructed on piers or a foundation above grade.
3. For the purposes of this zone *deck* is defined as a structure abutting a mobile home with no roof or walls except for visual partitions and railings and is constructed on piers or a foundation above grade.

Section 3.4.144

LAKES DISTRICT COMPREHENSIVE DEVELOPMENT ZONE¹

CD44

3.4.144.1 APPLICABILITY OF THE BYLAW

The regulations of Regional District of Nanaimo Land Use and Subdivision Bylaw No. 500, 1987 shall apply to the lands zoned CD44. In addition to these regulations, and where there is a conflict with these regulations, the regulations of the CD44 Zone shall apply.

3.4.144.2 PURPOSE

The purpose of the CD44 Zone is to allow a range of land uses and residential densities with diverse housing types, recreational opportunities, and locally serving commercial services in accordance with Schedule 'B' - Lakes District Neighbourhood Plan in the Nanoose Bay Official Community Plan Bylaw No. 1400, 2005.

The lands encompassed within the CD44 Zone are divided into eight sub-zoning areas including: Regional Park (CD44 - PR1), Community Park (CD44 - PR2), Residential Single Dwelling (CD44 – RS), Residential Single Dwelling & Duplex (CD44 – RSD), Residential Multiple Dwelling (CD44 – RMD), Neighbourhood Mixed Use (CD44 – MU), Lakehouse Centre (CD44 – LC), and Civic Infrastructure (CD44 – CI). Specific regulations apply to each zoning area, in addition to the Definitions and General Regulations as set out in the CD44 Zone.

The extent of each zoning area in the Lakes District Comprehensive Development Zone is shown on Schedule '3A' Zoning Maps of Regional District of Nanaimo Land Use and Subdivision Bylaw No. 500, 1987.

3.4.144.3 DEFINITIONS

artisan workshop means production, service, repair or maintenance of an article, substance, material, fabric or compound, provided uses are not noxious or offensive to the immediate neighbourhood or the general public by reason of emitting odours, dust, gas, noise, effluent, or hazard; and having a gross floor area not exceeding 200 m² including retail sales accessory to the principal use;

bulk grade means the elevation of the surface of the ground at any point within a parcel as established on a parcel contour plan and which may not increase above natural grade by more than 2.0 m at any point;

commercial use means the occupancy or use of a building or land for the purpose of carrying out business, professional activities, artisan workshop, retail or personal service use;

community garden means a non-commercial facility for the cultivation of fruits, flowers, vegetables or ornamental plants;

community park means use of land, buildings or structures primarily for recreation, including playgrounds, band shells, skateboard parks, canoe and kayak docks, boathouses, playfields, field houses, multi-purpose courts and the like;

¹ Bylaw No. 500.384, adopted July 22, 2014

duplex means two self-contained dwelling units with separate ground level entrances, and which are adjoined by a common wall;

height means the elevation of a point directly below:

- a) That part of the building or structure being measured above the land (or surface of water at high water), and;
- b) On a line connecting the two intersections of the natural grade and the outermost exterior walls or supports as indicated on a plan showing any complete vertical section of that part of a building or structure where permitted in the applicable zone; or,
- c) On a line connecting the two intersections of the bulk grade, as defined on a parcel contour plan, and the outermost exterior walls or supports as indicated on a plan showing any complete vertical section of that part of a building within a Residential Single Dwelling & Duplex, Residential Multiple Dwelling, Neighbourhood Mixed Use or Lakehouse Centre zoning area;

garden centre means the use of land, buildings, or structures for the purpose of retail sales of fruits, flowers, vegetables or ornamental plants, trees, and associated gardening and landscaping supplies and outdoor garden equipment;

impermeable surface area means the sum total horizontal area as measured from the outermost perimeter of all buildings or part thereof together with any ground covering that does not naturally exist on the site and cannot be readily penetrated by water, such as roads, paved parking areas, driveways, patios, games courts and the like, on the parcel expressed as a percentage of the total parcel area;

mobile food cart means a mobile cart from which food and/or drink is dispensed, and where the entire stock of goods offered for sale is carried and contained in the cart and which may change locations from time to time, and which is not located in a permanent building or structure, and is removed from public access when not in use;

multiple dwelling unit development means the establishment of three or more dwelling units within a building on a parcel;

natural grade means the elevation of the surface of the ground in its natural state prior to any human-made alterations as determined by a BC Land Surveyor;

nature park means the use of land, buildings or structures primarily for conservation and enjoyment of natural areas and may include boardwalks, trails, environmentally sensitive areas, nature sanctuaries and the like;

parcel contour plan means a survey plan prepared by a BC Land Surveyor or Professional Engineer at minimum 0.5 m contours and showing natural grade and bulk grade of the surface of the ground;

restaurant means an eating establishment providing for the sale of prepared foods and beverages to be consumed on or off the premises, and may include café, delicatessen, and take-out restaurant, but specifically excludes neighbourhood pub, drive-in and drive-thru establishment;

retail store means a sales outlet contained under one roof, having a gross floor area not exceeding 250 m², and providing for the retail sale and display of goods, but specifically excludes industrial uses and gasoline service station;

secondary suite means one or more habitable rooms, but not more than two bedrooms and one cooking facility, constituting a self-contained dwelling unit with a separate entrance, but which is clearly subordinate to the principal dwelling, and is limited to residential use;

seniors' congregate housing means a residential or institutional facility which provides for seniors' congregate housing units with common living facilities, one or more meals per day and housekeeping services, contains a common dining area with a capacity sufficient to accommodate all residents of the facility, and may contain accessory personal service use and accessory convenience store use;

seniors' congregate housing unit means a sleeping unit or a dwelling unit containing one or more sleeping units within a seniors' congregate housing facility;

sleeping unit means a bedroom or other area which is used or intended to be used for sleeping, or sleeping and living purposes, and which does not contain provisions for cooking;

storage means the use of the land, buildings or structures for the temporary storing of property or goods;

storey means that portion of a building situated between the top of any floor and the top of the floor next above it, and if there is no floor above it, that portion between the top of the floor and the ceiling above it;

temporary building means a building which is not supported on permanent foundations and which may or may not be connected to community water or sewer;

tourist accommodation means the rental of a lodging unit in a hotel, motel, or cabin for the temporary accommodation of the traveling public with continuous occupancy not exceeding ninety (90) calendar days and specifically excludes a manufactured home and residential use;

unit density means a measurement of development intensity on a parcel, represented by the total number of dwelling units on a parcel divided by the parcel area in hectares (units per hectare) but excludes dedicated road and dedicated park; and,

utility use means a system of works or services or a facility operated by or on behalf of a government or a utility company to provide or in connection with the provision of water, sewer, drainage, gas, electricity, surface transportation or communication services.

3.4.144.4 GENERAL REGULATIONS

1) Total Number of Dwelling Units

The total number of dwelling units within the lands zoned CD44 shall not exceed 1,675 dwelling units.

2) Uses Permitted in all Zones

The following uses are permitted in all zoning areas of the CD44 Zone:

- a) *Community garden*
- b) *Utility use*

3) Secondary Suites

Secondary suites are permitted in the *Residential Single Dwelling* and *Residential Single Dwelling & Duplex* zoning areas, provided that:

- a) A *secondary suite* is permitted only within a principal single dwelling unit on a parcel and is not permitted within a *duplex*;
- b) Not more than one *secondary suite* shall be permitted per single dwelling unit on a parcel;
- c) The size of a *secondary suite* within the principal building shall not exceed 40% of the habitable floor space of the principal building to a maximum of 90 m²;
- d) Secondary suites are not counted as dwelling units for the purpose of calculating the Total Number of Dwelling Units in accordance with the General Regulations Section 3.4.144.4 1) in this Zone;
- e) A principal dwelling unit may contain either a *secondary suite* or a bed and breakfast, but not both; and,
- f) A minimum of one off-street parking space is required for a *secondary suite*, in addition to parking requirements for the principal dwelling unit set out in Schedule '3B' Off-Street Parking and Loading Spaces.

4) Rainwater Harvesting

Where a Building Permit is not required for rainwater harvesting structures, equipment and apparatus, including rain barrels and cisterns, they are excluded from the building setback requirements.

5) Seniors' Congregate Housing

Seniors' congregate housing, where permitted in the zone, is subject to the following regulations:

- a) For the purposes of calculating unit density, each *sleeping unit*, and each *sleeping unit* within a dwelling unit within a seniors' congregate housing facility is equal to 0.2 units;
- b) The gross floor area of a *seniors' congregate housing unit* shall not be less than 26 m² and not more than 50 m²; and
- c) Accessory personal service and convenience store uses, where provided, shall be contained within the seniors' congregate housing facility and shall be accessible only

from an internal hallway or corridor. The combined total floor area of all accessory personal service and convenience store uses shall not exceed 150 m² per seniors' congregate housing facility.

6) Temporary Buildings, Structures and Uses for Seasonal Vending

Temporary buildings, structures, or mobile food carts for the purpose of seasonal vending on properties are permitted within any regional park, community park, and commercially zoned properties provided that:

- a) The parking requirements of Schedule '3B' Off-Street Parking and Loading Spaces are met; and,
- b) Potable water and washroom facilities are available on-site if food is served.

7) Tourist Accommodation

Temporary stays within *tourist accommodation* is limited to a maximum consecutive or non-consecutive stay of ninety (90) calendar days per visitor in any twelve (12) month period within any tourist accommodation unit on a parcel. The relocation of a visitor to another unit within the parcel does not constitute the start of a new stay.

8) Building Height

The following regulations apply to building height within all zoning areas of the CD44 Zone:

- a) A *parcel contour plan* defining areas where natural grade has been disturbed shall be submitted to the Regional District upon the earlier of the submission of a development permit application or prior to registration of a subdivision plan.
- b) Structures such as antennae, chimney stacks, steeples, elevator housings, roof stairway entrances, ventilating equipment or enclosures for such equipment, skylights, flagpoles and the like are exempt from the height requirement.
- c) Structures for sustainable building technologies, such as wind turbines, solar panels and rain barrels, cisterns and the like are permitted to exceed the height requirement provided that:
 - i) No such structure covers more than 20% of the parcel area; or
 - ii) If located on a building, no such structure covers more than 10% of the roof area; and,
 - iii) No such structure shall exceed twice the maximum building height permitted by the zone.

9) Storage

Storage use, where permitted in the zone, is subject to the following regulations:

- a) Boats, vehicles and recreational vehicles must be operational and capable of being licensed by the applicable licensing authority. Storage use excludes on-site fuel dispensing.
- b) Storage is accessory to the principal use and is limited to 33% of a parcel area.

- c) A continuous landscaping buffer with a minimum vegetation height of 2.0 m and width of 2.0 m shall be provided and maintained along all property lines adjacent to a storage use.

3.4.144.5 REGIONAL PARK

CD44 – PR1

Purpose

The intent of the Regional Park zoning area is to provide recreational opportunities associated with passive outdoor activities, and to protect the natural features and wildlife habitat that form an integral part of the landscape in the Lakes District neighbourhood.

Permitted Principal Uses

- a) nature park

Maximum Size of Buildings and Structures

Height	6.0 m within the setback area 9.5 m outside the setback area
Parcel coverage	10%

Minimum Setback Requirements

- a) Buildings
 - Front lot line 4.5 m
 - Exterior side lot line 4.5 m
 - All other lot lines 3.0 m

- b) Structures
 - Front lot line 0.0 m
 - All other lot lines 3.0 m

Off-Street Parking Requirements

Major staging area	10 spaces
Minor staging area	4 spaces
Bicycle parking	4 spaces per major or minor staging area

3.4.144.6 COMMUNITY PARK

CD44 – PR2

Purpose

The intent of the Community Park zoning area is to provide programmed park spaces and recreational opportunities and amenities for social gathering and outdoor activities in close proximity to residential neighbourhoods.

Permitted Principal Uses

- a) community park

Maximum Size of Buildings and Structures

Height	6.0 m within the setback area 9.5 m outside the setback area
Parcel coverage	20%

Minimum Setback Requirements

- a) Buildings
 - Front lot line 4.5 m
 - Exterior side lot line 4.5 m
 - All other lot lines 3.0 m

- b) Structures
 - Front lot line 0.0 m
 - All other lot lines 3.0 m

Off-Street Parking Requirements

Bicycle parking	6 spaces per parcel
-----------------	---------------------

3.4.144.7 RESIDENTIAL SINGLE DWELLING**CD44 – RS****Purpose**

The Residential Single Dwelling zoning area allows residential development on larger urban lots and provides flexibility in building siting for the retention of natural site features and a range of architectural forms.

Permitted Principal Uses

- a) residential use

Accessory Uses

- a) home based business
- b) secondary suite

Maximum Density

Residential use	1 dwelling unit per parcel
-----------------	----------------------------

Minimum Parcel Size

800 m² or 850 m² (corner parcel)

Maximum Size of Buildings and Structures

Height	
Principal building	9.5 m
Accessory buildings & structures	6.0 m
Parcel Coverage	40%
Impermeable Surface Area	50% (excluding a driveway not exceeding 6.0 m in width and located within a panhandle)

Minimum Setback Requirements

Front lot line	4.5 m 6.0 m to any garage door or carport entrance way facing a highway.
Interior side lot line	2.0 m
Exterior side lot line	4.5 m
Rear lot line	4.0 m

except one accessory building is permitted to be 1.0 m from an interior or rear lot line provided the building does not exceed 10 m² in floor area and 3.0 m in height.

3.4.144.8 RESIDENTIAL SINGLE DWELLING & DUPLEX**CD44 – RSD****Purpose**

The intent of the Residential Single Dwelling & Duplex zoning area is to increase the range of housing types offered and provide transition between larger lot single dwelling residential land uses and low to medium density housing. The provision of smaller single dwelling units and duplex homes serves to facilitate cluster development to maintain high conservation and recreation value in the adjacent areas.

Permitted Principal Uses

- a) residential use
- b) duplex use

Accessory Uses

- a) home based business
- b) secondary suite

Maximum Density

Residential use	1 dwelling unit per parcel
Duplex use	2 dwelling units per parcel

Minimum Parcel Size

Residential use	400 m ² or 450 m ² (corner parcel)
Duplex use	750 m ² or 800 m ² (corner parcel)

Maximum Size of Buildings and Structures

Height	
Principal building	9.5 m
Accessory buildings & structures	6.0 m
Parcel Coverage	
Residential use	60%
Duplex use	65%
Impermeable Surface Area	
Residential use	70% (excluding a driveway not exceeding 6.0 m in width and located within a panhandle)
Duplex use	75% (excluding a driveway not exceeding 6.0 m in width and located within a panhandle)

Minimum Setback Requirements

a) Residential use	
Front lot line	4.5 m 6.0 m to any garage door or carport entrance way facing a highway.
Interior side lot line	1.5 m
Exterior side lot line	4.5 m
Rear lot line	3.0 m
b) Duplex use	
Front lot line	4.5 m 6.0 m to any garage door or carport entrance way facing a highway.
Interior side lot line	2.0 m
Exterior side lot line	4.5 m
Rear lot line	4.0 m for a duplex
Strata road	3.0 m

except one accessory building per principal dwelling unit is permitted to be 1.0 m from an interior or rear lot line provided the building does not exceed 10 m² in floor area and 3.0 m in height.

3.4.144.9 RESIDENTIAL MULTIPLE DWELLING**CD44 – RMD****Purpose**

The Residential Multiple Dwelling zoning area allows for the development of a range of multiple dwelling housing types including duplexes, ground-oriented rowhomes and townhomes, and low-rise condominium buildings. These smaller unit types are intended to provide opportunities for ageing-in-place.

Permitted Principal Uses

- a) duplex use
- b) multiple dwelling unit development use

Maximum Density

Density	75 units per hectare (uph)
---------	----------------------------

Minimum Parcel Size

Duplex use	600 m ² or 650 m ² (corner parcel)
Multiple dwelling unit Development use	700 m ² or 750 m ² (corner parcel)

Maximum Size of Buildings and Structures

Height	
Duplex	9.5 m
Multiple dwelling unit development	21.0 m or 5 storeys, whichever is less
Accessory buildings & structures	6.0 m 8.5 m for one accessory building in a multiple dwelling unit development
Parcel Coverage	
	60%
	70% where the required parking spaces are located directly beneath the principal building.
Impermeable Surface Area	
	70%
	75% where the required parking spaces are located directly beneath the principal building (excluding a driveway not exceeding 6.0 m in width and located within a panhandle).

Minimum Setback Requirements

Front lot line	4.5 m 6.0 m to any garage door or carport entrance way facing a highway.
Interior side lot line	2.0 m
Exterior side lot line	4.5 m
Rear lot line	4.0 m
Strata road	3.0 m

except one accessory building per principal dwelling unit is permitted to be 1.0 m from an interior or rear lot line provided the building does not exceed 10 m² in floor area and 3.0 m in height.

Off-Street Parking Requirements

In addition to the requirements of Schedule '3B' Off-Street Parking & Loading Spaces, the following bicycle parking is required:

Use	Required Bicycle Parking Spaces
Multiple dwelling unit development use	1 secure interior space per 2 dwelling units, and 4 spaces adjacent to the primary building entrance.

3.4.144.10 NEIGHBOURHOOD MIXED USE

CD44 – MU

Purpose

As a complement to the existing commercial centres at Red Gap and Schooner Cove, the Neighbourhood Mixed Use zoning area is intended to accommodate locally serving civic, commercial and residential uses at the entrance of the Lakes District neighbourhood. A mix of small scale retail, professional office use, live/work, compact housing and other compatible uses will provide community gathering spaces with flexibility to accommodate the future needs of the community.

Permitted Principal Uses

- a) artisan workshop
- b) garden centre
- c) multiple dwelling unit development
- d) office
- e) personal care
- f) personal service use
- g) retail store
- h) restaurant
- i) school
- j) seniors’ congregate housing
- k) tourist accommodation

Accessory Uses

- a) storage

Maximum Density

Density	75 units per hectare (uph) for residential uses
---------	---

Minimum Parcel Size

Commercial / Mixed use	2,500 m ²
Multiple dwelling unit development use	700 m ² or 750 m ² (corner parcel)

Maximum Size of Buildings and Structures

Height	
Commercial use	10.0 m or 3 storeys, whichever is less
Mixed use or Multiple dwelling unit development	21.0 m or 5 storeys, whichever is less

Accessory buildings & structures	6.0 m 8.5 m for one accessory building in a multiple dwelling unit development
Parcel Coverage	70% 80% where the required parking spaces are located directly beneath the principal building.
Impermeable Surface Area	80% 85% where the required parking spaces are located directly beneath the principal building (excluding a driveway not exceeding 6.0 m in width and located within a panhandle). 75% for storage use only

Minimum Setback Requirements

a) Commercial	Lot lines fronting a highway 4.5 m All other lot lines 0.0 m
b) Residential or Mixed use:	Front lot line 4.5 m 6.0 m to any garage door or carport entrance way facing a highway. Interior side lot line 2.0 m Exterior side lot line 4.5 m Rear lot line 4.0 m Strata road 3.0 m

except one accessory building is permitted to be 1.0 m from an interior or rear lot line provided the building does not exceed 10 m² in floor area and 3.0 m in height.

Off-Street Parking Requirements

Seniors’ congregate housing 1 space per 2 employees and 1 per 5 beds

For other uses permitted in this zone, parking shall be provided as set out under Schedule ‘3B’ Off-Street Parking & Loading Spaces.

In addition to the requirements of Schedule ‘3B’ Off-Street Parking & Loading Spaces, the following bicycle parking is required:

Use	Required Bicycle Parking Spaces
Commercial use	1 space per 475 m ² commercial floor area adjacent to primary building entrances.
Multiple dwelling unit development use	1 secure interior space per 2 dwelling units, and 4 spaces adjacent to the primary building entrance.
Seniors' congregate housing	1 secure interior space per 10 employees.

Other Regulations

- a) No single use may occupy more than 80% of the total building floor area within a parcel.
- b) Commercial use on the ground floor of a building is only permitted where an additional storey is provided above.

3.4.144.11 LAKEHOUSE CENTRE

CD44 – LC

Purpose

The intent of the Lakehouse Centre zoning area is to allow a commercial recreational centre in the Lakes District community adjacent to Enos Lake park and trails. This privately operated facility may also be used to accommodate Lakes District regional park administration and limited programs for regional park staging as well as some tourist accommodation and other compatible accessory uses.

Permitted Principal Uses

- a) assembly use
- b) recreational facility

Accessory Uses

- a) convenience store
- b) inn
- c) office
- d) personal care
- e) personal service use
- f) restaurant
- g) retail store
- h) school
- i) theatre
- j) tourist accommodation
- k) tourist information booth
- l) tourist store

Maximum Density

Density	12 units per hectare (uph) for tourist accommodation
---------	--

Minimum Parcel Size

9,000 m²

Maximum Size of Buildings and Structures

Height	
Principal building	10.0 m
Accessory buildings & structures	6.0 m

Parcel Coverage	40%
Impermeable Surface Area	50%

Minimum Setback Requirements

All lot lines	6.0m
---------------	------

Off-Street Parking Requirements

In addition to the requirements of Schedule '3B' Off-Street Parking & Loading Spaces, the following parking is required:

Bicycle parking	1 space 95 m ² floor area
-----------------	--------------------------------------

3.4.144.12 CIVIC INFRASTRUCTURE

CD44 – CI

Purpose

The Civic Infrastructure zoning area allows for community servicing infrastructure and utilities, specifically related the provision of potable water and sanitary sewer servicing and rainwater management.

Permitted Principal Uses

- a) utility use

Maximum Size of Buildings and Structures

Height	10.0m
Parcel coverage	25%

Minimum Setback Requirements

All lot lines	6.0m
---------------	------

Other Regulations

Notwithstanding Schedule '3F' Landscaping Regulations and Standards, Section 3.2.1, a minimum 3.0m wide landscape buffer shall be provided within the setback area of a parcel adjacent to a highway or residential use where buildings or structures are proposed for utility use.

Section 3.4.145

SCHOONER COVE COMPREHENSIVE DEVELOPMENT ZONE¹

CD45

3.4.145.1 APPLICABILITY OF THE BYLAW

The regulations of Regional District of Nanaimo Land Use and Subdivision Bylaw No. 500, 1987 shall apply to the lands zoned CD45. In addition to these regulations, and where there is a conflict with these regulations, the regulations of the CD45 Zone shall apply.

3.4.145.2 PURPOSE

The purpose of the CD45 Zone is to allow a mixed-use waterfront village with neighbourhood-oriented commercial shops and services, a marina, a range of multiple dwelling housing types, and a publicly accessible network of waterfront boardwalks, plazas, and pathways in accordance with Schedule 'C' – Schooner Cove Neighbourhood Plan in the Nanoose Bay Official Community Plan Bylaw No. 1400, 2005.

The lands encompassed within the CD45 Zone are divided into three sub-zoning areas including: Village Mixed Use (CD45 – MU), Marina (CD45 – MA), and Residential Multiple Dwelling (CD45 – RMD). Specific regulations apply to each zoning area, in addition to the Definitions and General Regulations as set out in the CD45 Zone.

The extent of each zoning area in the Lakes District Comprehensive Development Zone is shown on Schedule '3A' Zoning Maps of Regional District of Nanaimo Land Use and Subdivision Bylaw No. 500, 1987.

3.4.145.3 DEFINITIONS

assembly use means the use of land, buildings or structures to accommodate exhibits, special events or meetings and includes auditorium, church, museum, community hall, fraternal lodge, youth centre, theatre;

artisan workshop means production, service, repair or maintenance of an article, substance, material, fabric or compound, provided uses are not noxious or offensive to the immediate neighbourhood or the general public by reason of emitting odours, dust, gas, noise, effluent, or hazard; and having a gross floor area not exceeding 200 m² including retail sales accessory to the principal use;

boat launching facility means jib crane hoist, boat ramp or other means to launch and/or retrieve watercraft;

commercial parking means use of land, buildings and structures for the purpose of providing short-term commercial parking spaces;

commercial use means the occupancy or use of a building or land for the purpose of carrying out business, professional activities, artisan workshop, retail or personal service use;

community garden means a non-commercial facility for the cultivation of fruits, flowers, vegetables or ornamental plants;

geodetic elevation means the vertical elevation or height of a given point on land or above the surface of the water measured from the geodetic datum as determined by a BC Land Surveyor;

¹ Bylaw No. 500.385, adopted July 22, 2014

grocery store means a sales outlet contained under one roof, having a gross floor area not exceeding 750 m², and providing for the retail sale and display of food and related goods;

height means that part of a building or structure measured above the geodetic datum as determined by a BC Land Surveyor to the outermost exterior walls or supports as indicated on a plan showing any complete vertical section of that part of a building or structure where permitted in the applicable zone;

impermeable surface area means the sum total horizontal area as measured from the outermost perimeter of all buildings or part thereof together with any ground covering that does not naturally exist on the site and cannot be readily penetrated by water, such as roads, paved parking areas, driveways, patios, games courts and the like, on the parcel expressed as a percentage of the total parcel area;

liquor store means a retail store licensed under the Liquor Control and Licensing Act, and amendments thereto, for the sale of beer, wine and other alcoholic beverages;

live/work unit means the use of a building or portion thereof for an economic activity including artisan workshop, personal service use or office in combination with a dwelling unit;

marina means moorage, boat launching facilities, and outdoor recreation use, including the rental and maintenance of boats and seaplanes, and which may be equipped with administration facilities, washrooms, showers and refuse disposal facilities;

mobile food cart means a mobile cart from which food and/or drink is dispensed, and where the entire stock of goods offered for sale is carried and contained in the cart and which may change locations from time to time, and which is not located in a permanent building or structure, and is removed from public access when not in use;

multiple dwelling unit development means the establishment of three or more dwelling units within a building on a parcel;

neighbourhood pub means an establishment with a liquor primary licence issued pursuant to the Liquor Control and Licensing Act and amendments thereto;

resort condominium development means a hotel and includes hotel units subdivided pursuant to the Strata Property Act and amendments thereto, with continuous occupancy not exceeding ninety (90) calendar days and does not include residential use;

restaurant means an eating establishment providing for the sale of prepared foods and beverages to be consumed on or off the premises, and may include café, delicatessen, and take-out restaurant but specifically excludes neighbourhood pub, drive-in and drive-thru establishment;

retail store means a sales outlet contained under one roof, having a gross floor area not exceeding 250 m², and providing for the retail sale and display of goods, but specifically excludes industrial uses and gasoline service station;

seniors' congregate housing means a residential or institutional facility which provides for seniors' congregate housing units with common living facilities, one or more meals per day and housekeeping services, contains a common dining area with a capacity sufficient to accommodate all residents of the facility, and may contain accessory personal service use and accessory convenience store use;

seniors' congregate housing unit means a sleeping unit or a dwelling unit containing one or more sleeping units within a seniors' congregate housing facility;

sleeping unit means a bedroom or other area which is used or intended to be used for sleeping, or sleeping and living purposes, and which does not contain provisions for cooking;

storey means that portion of a building situated between the top of any floor and the top of the floor next above it, and if there is no floor above it, that portion between the top of the floor and the ceiling above it;

temporary building means a building which is not supported on permanent foundations and which may or may not be connected to community water or sewer;

tourist accommodation means the rental of a lodging unit in a hotel, motel, and cabin for the temporary accommodation of the traveling public with continuous occupancy not exceeding ninety (90) calendar days and specifically excludes a manufactured home and residential use; and,

unit density means a measurement of development intensity on a parcel, represented by the total number of dwelling units on a parcel divided by the parcel area in hectares (units per hectare) but excludes dedicated road and dedicated park.

3.4.145.4 GENERAL REGULATIONS

1) Total Number of Dwelling Units

The total number of dwelling units within the lands zoned CD45 shall not exceed 360 dwelling units.

2) Uses Permitted in all Zones

The following uses are permitted in all zoning areas of the CD45 Zone:

- a) *Community garden*

3) Rainwater Harvesting

Where a Building Permit is not required for rainwater harvesting structures, equipment and apparatus, including rain barrels and cisterns, they are excluded from the building setback requirements.

4) Seniors' Congregate Housing

Seniors' congregate housing, where permitted in the zone, is subject to the following regulations:

- a) For the purposes of calculating unit density, each *sleeping unit*, and each *sleeping unit* within a dwelling unit within a seniors' congregate housing facility is equal to 0.2 units;
- b) The gross floor area of a *seniors' congregate housing unit* shall not be less than 26 m² and not more than 50 m²; and
- c) Accessory personal service and convenience store uses, where provided, shall be contained within the seniors' congregate housing facility and shall be accessible only from an internal hallway or corridor. The combined total floor area of all accessory personal service and convenience store uses shall not exceed 150 m² per seniors' congregate housing facility.

5) Temporary Buildings, Structures and Uses for Seasonal Vending

Temporary buildings, structures, or mobile food carts for the purpose of seasonal vending on properties are permitted within any commercially zoned properties provided that potable water and washroom facilities are available on-site if food is served.

6) Resort Condominium and Tourist Accommodation

Temporary stays within *resort condominium development* or *tourist accommodation* is limited to a maximum consecutive or non-consecutive stay of ninety (90) calendar days per visitor in any twelve (12) month period within any resort condominium or tourist accommodation unit on a parcel. The relocation of a visitor to another unit within the parcel does not constitute the start of a new stay.

7) Building Height

The following regulations apply to building height within all zoning areas of the CD45 Zone:

- a) Structures such as antennae, chimney stacks, steeples, elevator housings, roof stairway entrances, ventilating equipment or enclosures for such equipment, skylights, flagpoles and the like are exempt from the height requirement.
- b) Structures for sustainable building technologies, such as solar panels and rain barrels, cisterns and the like are permitted to exceed the height requirement provided that:
 - i) No such structure covers more than 20% of the parcel area; or
 - ii) If located on a building, no such structure covers more than 10% of the roof area; and,
 - iii) No such structure shall exceed twice the maximum building height permitted by the zone.
- c) Notwithstanding 7 b) above, wind turbines in Area 'A' shall not exceed the maximum permitted building height in as shown on Schedule 1 of the CD45 Zone.

3.4.145.5 VILLAGE MIXED USE

CD45 – MU

Purpose

The intent of the Schooner Cove Village Mixed Use zoning area is to establish a vibrant commercial and civic core with a pedestrian-oriented village on the waterfront and ground-oriented commercial uses such as restaurants, shops and services with residential uses above.

Permitted Principal Uses

- a) artisan workshop
- b) assembly use
- c) grocery store
- d) office
- e) liquor store
- f) live/work
- g) multiple dwelling unit development use
- h) neighbourhood pub
- i) outdoor recreation
- j) personal service use
- k) recreation facility
- l) resort condominium development use
- m) restaurant
- n) retail store
- o) seniors' congregate care
- p) tourist accommodation

Accessory Uses

- a) commercial parking
- b) marina sales
- c) tourist information booth

Maximum Density

Maximum 50 dwelling units permitted in the CD45 – MU Zone.

Minimum Parcel Size

Commercial / mixed use	900 m ²
Multiple dwelling unit development	2,000 m ²

Maximum Size of Buildings and Structures

The maximum permitted building height shall be as shown on **Schedule 1 Maximum Building Height Plan** in the CD45 Zone and as summarized below:

Height

Principal buildings

Area B	18.0 m geodetic elevation or 3 storeys, whichever is less
Area C	22.0 m geodetic elevation or 3 storeys, whichever is less
Area D	26.1 m geodetic elevation or 5 storeys, whichever is less
Area E	31.0 m geodetic elevation or 5 storeys, whichever is less

Accessory buildings

Area D	One accessory building is permitted to a height of 2 storeys, provided that a storey does not exceed 5.0 m.
--------	---

Maximum Floor Area	Total combined floor area for non-residential uses shall not exceed 2,325 m ² .
--------------------	--

Parcel Coverage	70%
	80% where the required parking spaces are located directly beneath the principal building.

Impermeable Surface Area	80%
	85% where the required parking spaces are located directly beneath the principal building.

Minimum Setback Requirements

- | | |
|--|-------|
| a) Lot lines fronting a highway | 4.5 m |
| b) Lot lines that are common with Lot B, District Lot 78, Nanoose District Strata Plan 745 | 4.5 m |
| c) All other lot lines | 0.0 m |

- d) Notwithstanding Section 3.3.9 b) Setbacks - Sea for Electoral Area 'E', a 0.0 m setback for buildings is permitted for up to a maximum of 35 percent of the length of the parcel boundary that is common to the sea.
- e) Notwithstanding Section 3.3.9 b) Setbacks - Sea for Electoral Area 'E', a 0.0 m setback is permitted for structures.

Off-Street Parking Requirements

Seniors' congregate housing	1 space per 2 employees and 1 per 5 beds
Commercial use, restaurant use, neighbourhood pub use	74 spaces in total, plus 1 space per 3 seats where a restaurant or neighbourhood pub exceeds 100 seats.

For other uses permitted in this zone, parking shall be provided as set out under Schedule '3B' Off-Street Parking & Loading Spaces.

In addition to the requirements of Schedule '3B' Off-Street Parking & Loading Spaces, the following bicycle parking is required:

Use	Required Bicycle Parking Spaces
Commercial use, restaurant use, neighbourhood pub use	1 space per 475 m ² commercial floor area adjacent to primary building entrances.
Multiple dwelling unit development use	1 secure interior space per 2 dwelling units, and 4 spaces adjacent to the primary building entrance.
Seniors' congregate housing	1 secure interior space per 10 employees.

Other Regulations

- a) Non-residential uses shall comprise at least 20% of the total building floor area within a parcel.
- b) A maximum of one grocery store is permitted within the Village Mixed Use Zone.
- c) Notwithstanding Schedule '3F' Landscaping Regulations and Standards, Section 2.1.1 a landscape buffer is not required for a designated highway adjacent to a commercial use and multiple dwelling unit development.

3.4.145.6 MARINA

CD45 – MA

Purpose

The intent of the Marina zoning area is to allow the operation of a marina business including a moorage, marina office, marine fuel supply station, and other ancillary marina services and facilities.

Permitted Principal Uses

- a) boat launching facility
- b) marina use

Accessory Uses

- a) convenience store
- b) marina fuel supply station
- c) marina sales

Maximum Size of Buildings and Structures

The maximum permitted building height shall be as shown on **Schedule 1 Maximum Building Height Plan** in the CD45 Zone and as summarized below:

Height Area A	7.0 m geodetic elevation or 1 storey, whichever is less, notwithstanding floating buildings and structures shall be measured from the surface of the water.
Parcel Coverage	5% provided that no individual building covers more than 1% of a parcel.

Minimum Setback Requirements

Notwithstanding Section 3.3.9 b) Setbacks - Sea for Electoral Area 'E', a 0.0 m setback is permitted for buildings and structures.

Off-Street Parking Requirements

Marina use	1 parking space per 4 marina slips
Boat launching facility	20 boat trailer parking spaces

For other uses permitted in this zone, parking shall be provided as set out under Schedule '3B' Off-Street Parking & Loading Spaces.

A minimum of 25% of the parking required for marina use in the CD45 – MA Zone shall be provided within the lands zoned CD45 – MU and a maximum of 75% of the marina parking

may be provided within the lands zoned CD45 – RMD, provided that none of the required off-street parking is located within a highway.

The off-street parking required for a *boat launching facility* shall be provided within the lands zoned CD45 – RMD.

In addition to the requirements of Schedule '3B' Off-Street Parking & Loading Spaces, the following bicycle parking is required:

Use	Required Bicycle Parking Spaces
Marina use	8 spaces

3.4.145.7

RESIDENTIAL MULTIPLE DWELLING

CD45 – RMD

Purpose

The Residential Multiple Dwelling zoning area allows for the development of multiple dwelling housing types including ground-oriented and low-rise condominium buildings. These smaller unit types are intended to provide opportunities for downsizing and ageing-in-place in close proximity to publically-accessible open space and village commercial uses.

Permitted Principal Uses

- a) commercial parking
- b) multiple dwelling unit development use
- c) seniors’ congregate housing

Maximum Density

Maximum 310 dwelling units permitted in the CD45 – RMD Zone

Minimum Parcel Size

Multiple dwelling unit development	2,000 m ²
------------------------------------	----------------------

Maximum Size of Buildings and Structures

The maximum permitted building height shall be as shown on **Schedule 1 Maximum Building Height Plan** in the CD45 Zone and as summarized below:

Height

Principal buildings

- | | |
|--------|---|
| Area D | 26.1 m geodetic elevation or 5 storeys, whichever is less |
| Area F | 37.0 m geodetic elevation or 5 storeys, whichever is less |
| Area G | 42.0 m geodetic elevation or 5 storeys, whichever is less |

Accessory buildings

- | | |
|--------|--|
| Area D | One accessory building is permitted to a height of 2 storeys, and all other accessory buildings shall not exceed 1 storey, provided that a storey does not exceed 5.0 m. |
| Area F | One accessory building is permitted to a height of 2 storeys, and all other accessory buildings shall not exceed 1 storey, provided that a storey does not exceed 5.0 m. |
| Area G | One accessory building is permitted to a height of 2 storeys, and all other accessory buildings shall not exceed 1 storey, provided that a storey does not exceed 5.0 m. |

Parcel Coverage	60%
	70% where the required parking spaces are located directly beneath the principal building.
Impermeable Surface Area	80%
	85% where the required parking spaces are located directly beneath the principal building.

Minimum Setback Requirements

All lot lines	5.0 m
---------------	-------

Off-Street Parking Requirements

Seniors' congregate housing	1 space per 2 employees and 1 per 5 beds
-----------------------------	--

For other uses permitted in this zone, parking shall be provided as set out under Schedule '3B' Off-Street Parking & Loading Spaces.

In addition to the requirements of Schedule '3B' Off-Street Parking & Loading Spaces, the following bicycle parking is required:

Use	Required Bicycle Parking Spaces
Multiple dwelling unit development use	1 secure interior space per 2 dwelling units, and 4 spaces adjacent to the primary building entrance.

Seniors' congregate housing 1 secure interior space per 10 employees.

Other Regulations

Notwithstanding Schedule '3F' Landscaping Regulations and Standards, Section 3.2.1, a minimum 3.0m wide landscape buffer shall be provided within the setback area of a parcel adjacent to a highway for a multiple dwelling unit development.

REGIONAL DISTRICT OF NANAIMO

BYLAW NO. 500

SCHEDULE '3A'

ZONING MAPS

REGIONAL DISTRICT OF NANAIMO

BYLAW NO. 500

SCHEDULE '3B'

OFF-STREET PARKING & LOADING SPACES

1. GENERAL REQUIREMENTS

1.1 Location

All off-street parking and loading spaces shall be located:

- a) on the same parcel as the development, building or use they are intended to serve;
- b) subject to the setback requirements of the zone that applies to that parcel.

1.2 Disability Spaces

- 1) When any development, building or use requires or provides more than 20 off-street parking spaces, one parking space shall be provided for the use of persons with a physical disability, together with one additional disability space for each additional 50 off-street parking spaces required or provided.
- 2) Each disability space shall be:
 - a) a minimum of 4.0 m in width;
 - b) marked with the International Symbol of Accessibility for the Handicapped as specified in Table 3 of this Schedule; and
 - c) located within convenient access of the development, building or use that it is intended to serve, and with minimum changes in level.

1.3 Surface

When any development, building or use requires or provides more than 4 off-street parking spaces, all parking spaces and loading spaces shall be provided and maintained with a hard durable surface that does not produce dust.

1.4 Gradient

All parking and loading spaces shall have a maximum gradient and cross-slope of 6%.

2. OFF-STREET PARKING SPACES

2.1 Stall and Aisle Dimensions

All off-street parking spaces shall be in accordance with Table 2 of this Schedule.

2.2 Reduction in Stall Length for Small Cars

When any development, building or use provides more than 100 parking stalls, up to 20% of the total stalls may be reduced to 4.6 m in length provided those stalls are combined in groups of at least 20 stalls, and marked with the words "SMALL CAR ONLY" on the pavement or wall facing.

2.3 Access

Adequate provision shall be made for access by vehicles to all off-street parking spaces located in a parking area by means of unobstructed maneuvering aisles, the dimensions of which shall be in conformity with Table 2 of this Schedule.

2.4 Vertical Clearance

The minimum vertical clearance of parking stalls and aisles shall be 2.25 m.

2.5 Calculation

- 1) The minimum number of off-street parking spaces shall be provided in accordance with Table 1 of this Schedule.
- 2) If a use is not listed in Table 1, the number of spaces shall be calculated on the basis of a similar use that is listed.
- 3) If more than one use is located on a parcel or parking collectively serves more than one building or use, the total number of spaces shall be the sum of the various classes of uses calculated separately, and the parking or loading space required for one use shall not be included in calculations for any other use.
- 4) Where the calculation of a total required space results in a fractional number, the nearest whole number above that calculation shall be taken.
- 5) The required number of off-street parking spaces need not be provided where an addition or alteration to a building or a change in its use would result in an increase of less than 10% of the number of spaces required up to a maximum of 5 spaces; where an addition, alteration or change in use requires more than 5 spaces the number of spaces determined by Table 1 shall be provided.

3. LOADING SPACES

3.1 Dimensions

All off-street loading spaces shall be a minimum of 9.0 m in length and 3.0 m in width, and have a vertical clearance of 4.0 m.

3.2 Access

Adequate provision shall be made for access by vehicles to all off-street loading spaces by means of a 6.0 m maneuvering aisle and shall be located so that each separate use within a development has access to a space.

3.3 Demarcation

All off-street loading spaces shall be clearly marked with the words "LOADING SPACE ONLY" on the pavement or wall facing.

3.4 Calculation

For commercial, industrial or public use 1 off-street loading space shall be provided for every 2000 m² of floor area or portion thereof of all buildings located on a parcel, except where a use requires less than 4 parking spaces then no loading space shall be required.

REGIONAL DISTRICT OF NANAIMO

BYLAW NO. 500

SCHEDULE '3B'

TABLE 1

REQUIRED NUMBER OF OFF STREET PARKING SPACES

The minimum number of off-street parking spaces shall be provided in accordance with the following table:

Use	Required Parking Spaces
Residential	
Mobile Home Parks	(see Schedule '3D' of this Bylaw)
Multi-unit dwellings	1 per 4 units (visitor) plus
- bachelor	1 per dwelling unit
- 1 bedroom	1.25 per dwelling unit
- 2 bedrooms	1.50 per dwelling unit
- 3 or more bedrooms	2 per dwelling unit
Single dwelling unit and duplex	2 per dwelling unit
Home based business, excluding bed and breakfast	2 plus 1 per non-resident employee
Bed and breakfast	1 per bedroom used for bed and breakfast
Commercial	
Agri-tourism Accommodation Cabin	one per cabin
Animal Care	1 per 20.0 m ² of floor area
Bowling Alley	3 per lane
Campground	(see Schedule '3C' of this Bylaw)
Fairground	1 per 2 employees plus 1 per 100 m ² of site area
Fast Food Outlet	1 per 10.0 m ² of floor area
Farm Retail Sales	one per 5 m ² of floor area plus one per two Employees
Financial Institution	1 per 20.0 m ² of floor area
Funeral Parlour	1 per 4 seats in Chapel
Gasoline Service Station	4 per service bay plus 1 per 15.0 m ² of floor area
Golf Course (9 holes)	75 spaces per 9 holes
Golf Driving Range	2 per tee
Health Club, Spa, Games Court, Gymnasium	1 per 10.0 m ² of fitness or gymnasium floor area
Heavy Equipment Display	1 per 70.0 m ² of floor area
Hotel or Resort Condominium	1 per unit, plus 1 per 3 seats in restaurant or licensed premises, plus 1 per 4 units (visitor)
Laundromat	1 per 3 washing machines
Laundry and Dry Cleaning Establishment	1 per 2 employees counted as a total of 2 shifts

Marina	1 per 2 mooring berths plus 1 per 2 employees
Neighbourhood Pub	1 per 3 seats
Nursery	1 per 15.0 m ² of sales building
Office	1 per 15.0 m ² of floor area
- medical	
- single tenant	1 per 32.0 m ² of floor area
- multi tenant	1 per 30.0 m ² of floor area
Personal Service	1 per 50.0 m ² of floor area
Produce Market or Stand	1 per 5.0 m ² of floor area plus 1 per 2 employees
Restaurant	1 per 10.0 m ² of floor area
Retail, Tourist or Convenience Store	1 per 15.0 m ² of floor area
Shopping Centre- to 5000 m ² g.l.a.	6.5 per 100 m ² g.l.a.
- to 15 000 m ² g.l.a.	5.5 per 100 m ² g.l.a.
- above 15 000 m ² g.l.a.	1.5 per 100 m ² g.l.a.
Ski Resort	0.5 per person hourly capacity of ski lift
Theatre, Drive-in	1 per 2 employees

Industrial

Medium Industry	1 per 50.0 m ² of floor area
Taxi Stand	1 per taxi plus 1 per office employee
Transportation Terminal (excluding Taxi Stand)	1 per 10.0 m ² of waiting room
All other Industrial Uses	1 per 175.0 m ² of floor area used for storage 1 per 95.0 m ² of floor area used for display 1 per 15.0 m ² of floor area used for sales

Public and Institutional Uses

Beach, Swimming	1 per 9.0 m ² developed beach above high water mark
Cabin	2 per cabin
Church	1 per 4 seats
Church Hall, Lodge Hall, Private Clubs, Community Hall	1 per 20.0 m ² of floor area
College	10 per classroom
Day Care Facility	2 per facility plus 1 per employee
Hospital	1 per 2 employees plus 1 per 5 beds
Personal Care	1 per 3 beds
Police Office, Fire Station, Prison	1 per 2 employees counted as a total of 2 shifts
Recreational or Cultural Facility	1 per 50.0 m ² of floor area or 1 per 3 spectator seats or 1 per 5.0 m ² of floor area used for dancing or assembly or 1 per 4 persons capacity, whichever is the greater
Swimming Pool	1 per 5.0 m ² of pool water surface
Public Utility	1 per employee
School - Elementary	2 per classroom
- Secondary	5 per classroom
Tourist Information Booth	4 per employee

REGIONAL DISTRICT OF NANAIMO

BYLAW NO. 500

SCHEDULE '3C'

CAMPGROUND REGULATIONS AND STANDARDS

REGIONAL DISTRICT OF NANAIMO

BYLAW NO. 500

SCHEDULE '3C'

CAMPGROUND REGULATIONS AND STANDARDS

Campgrounds shall be established or extended in accordance with the following regulations and standards:

1. LAYOUT STANDARDS

1.1 *Camping Spaces*

- 1) Every camping space shall have a minimum area of not less than 110 m².
- 2) Every camping space shall have a maximum slope of 5%.
- 3) No camping space shall be located within:
 - a) 3.0 m of an internal access road; and
 - b) the setback areas in the applicable zones established pursuant to Part 3.4 of this Bylaw.
- 4) Each camping space shall have one conveniently located parking space adjacent to the internal access road and may be sited in the area allotted for the 3.0 m setback.
- 5) No recreation vehicle or tent shall be located elsewhere in a campground than on a camping space.
- 6) Only one recreational vehicle or tent shall be located on a camping space.

1.2 *Buffer Area*

- 1) Within a setback area established pursuant to Part 3.4 of this Bylaw the following shall not be located:
 - a) recreational or service area, except for waterfront recreation or amenity areas;
 - b) a camping space or the residence of the owner or manager;
 - c) any building or structure, except a fence, a wall or a campground identification sign not exceeding 1.5 m² in area;
 - d) a sewage disposal system, other than such parts of such a system as may be underground;
 - e) vehicle parking; or
 - f) internal access roads except those that directly traverse the setback area to connect the internal access road system of the campground to a highway.

1.3 *Internal Access Roads*

- 1) All internal access roads in the campground shall be of hard durable surface so as not to produce dust.
- 2) The minimum internal access road width requirement shall be 6.0 m.

- 3) Dead-end internal access roads and cul-de-sacs shall have a turning circle radius of 12.0 m.
- 4) The maximum grade of any internal access road shall be 10%.

1.4 Parking

Every campground shall provide for:

- a) one parking space for each employee; and
- b) three parking spaces for the owner's or manager's residence.

2. SERVICING

2.1 Sewage Disposal

Sewage disposal shall be by a community sewer system or a septic disposal system constructed to the standards of the relevant enactments.

2.2 Washroom Facilities

Washroom facilities shall be provided in every campground, and:

- a) shall be located in a separate building or buildings;
- b) shall be located a maximum of 150 m from any camping space and a minimum of 4.5 m from any camping space;
- c) the quantity of toilets, urinals, wash basins and showers shall be provided in accordance with the following table:

**TABLE 1
WASHROOM FACILITIES**

No. of Camping Spaces	Toilets		Urinals	Washbasins		Showers	
1-15	1	1	1	1	1	1	1
16-30	1	2	1	2	2	1	1
31-45	2	2	1	3	3	1	1
46-60	2	3	2	3	3	2	2
61-80	3	4	2	4	4	2	2
81-100	3	4	2	4	4	3	3
101-130	4	5	3	5	5	4	4
131-150	5	6	3	5	5	5	5

2.3 Sewage Disposal Station

One sewage disposal station for use by recreational vehicles shall:

- a) be established in every campground that contains more than 60 camping spaces; and
- b) be located in an area apart from any internal access road and to allow easy and convenient access by recreational vehicles for the purpose of disposing of the contents of such vehicle's sewage storage tanks; and

- c) be constructed in accordance with Table '2A' and '2B' of this Schedule.

2.4 Water System

- 1) All camping spaces shall be a maximum of 60.0 m from a standpipe, constructed in accordance with Table '3A' of this Schedule.
- 2) Every campground that contains more than 60 camping spaces shall be serviced by a community water system or a water supply system built to the standards of the Regional District of Nanaimo, as specified in Schedule '4D' of this Bylaw, and:
 - a) a minimum of 0.18 m³ per day of potable water per camping space shall be provided;
 - b) 20% of all camping spaces in the campground shall be equipped with a water hook-up for recreational vehicles.

2.5 Laundry Facilities

Laundry facilities shall be:

- a) provided in every campground that contains more than 60 camping spaces;
- b) provided in the ratio of 1 clothes washing machine and 1 clothes dryer for every 30 camping spaces or portion thereof;
- c) located in a separate room of a sanitary facility or building or in a separate building.

2.6 Garbage Disposal

- 1) For the disposal of garbage a minimum of one container shall be provided for every 2 camping spaces.
- 2) Each container shall be durable, insect-tight, water-tight and rodent-proof and shall be constructed in general compliance with standards set out in Tables '4A' or '4B' of this Schedule.

SCHEDULE '3D'

**RESIDENTIAL MOBILE HOME PARK
REGULATIONS AND STANDARDS**

REGIONAL DISTRICT OF NANAIMO

BYLAW NO. 500

SCHEDULE '3D'

RESIDENTIAL MOBILE HOME PARK REGULATIONS AND STANDARDS

Mobile home parks shall be established or extended in accordance with the following regulations and standards:

1. GENERAL REQUIREMENTS

- 1) No person shall establish, construct, alter or subdivide a mobile home park until written approval of detailed plans or specifications is received and a Mobile Home Park Permit is issued by the Regional District.
- 2) Nothing contained in this Schedule shall relieve any person from obtaining the necessary building permits and approvals for buildings and structures constructed, located or relocated in a mobile home park.
- 3) A copy of the Mobile Home Park Permit, a copy of this Schedule, and Part 3.4.66 of this Bylaw shall be permanently posted in the mobile home park office for the reference of mobile home park occupiers.

2. MOBILE HOME PARK APPLICATION, FEE, APPROVAL AND PERMIT

2.1 Application

All applications for approval of plans and specifications shall be made in writing to the Regional District and shall include 2 full sets of working drawings to scale showing:

- a) the name and address of the applicant;
- b) the legal description of the land on which the proposed mobile home park is to be established, constructed, altered or extended;
- c) a north arrow and notations of scales used;
- d) the parcel dimensions;
- e) the location and dimensions of the setback area;
- f) the number, location, dimensions and designation of all mobile home spaces;
- g) the location, dimensions and grade of all internal access roads and their relationship to existing highways;
- h) the location and dimensions of all recreation or common areas;
- i) the location and dimensions of the owner's or manager's dwelling unit and all other accessory buildings;
- j) the location and details of the source of potable water supply, treatment plants, distribution lines and outlets;
- k) the location and details of all connections to the sewer, sewer lines, septic tank and subsurface disposal fields;
- l) the location and details of all on-site refuse disposal areas;
- m) a landscaping plan for the mobile home park;
- n) all watercourses or water frontage within or adjacent to the mobile home park;
- o) all steep banks or slopes within or adjacent to the land concerned; and
- p) any other information the Regional District may deem necessary.

2.2 Permit Application Fee

Each application for a Mobile Home Park Permit shall be accompanied by an application fee of \$25.00 for the first mobile home space and \$10.00 for each additional mobile home space shown on the mobile home park plan.

2.3 Approval of Application and Permit

- 1) No person shall establish, construct or alter a mobile home park without a Mobile Home Park Permit issued by the Regional District.
- 2) A Mobile Home Park Permit shall permit the establishment of a mobile home park on the land concerned only in compliance with the mobile home park plan as approved and for which a permit has been issued.
- 3) A Mobile Home Park Permit shall not be issued until the necessary permits and approvals have been granted by the other authorities also having jurisdiction.
- 4) Subsequent to examination of an application the Regional District shall notify the applicant in writing within 60 days that either a Mobile Home park Permit is issued or that it is refused and the reasons therefore.
- 5) In the event that after the issuance of a Mobile Home Park Permit, the construction authorized thereunder is not commenced within 180 days from the date of issuance, then such permit shall be void, and the work shall not be commenced until a new permit has been issued and the fee paid.

3. STANDARDS

3.1 Mobile Home Spaces

- 1) Every mobile home space shall:
 - a) have a minimum area of 370 m²;
 - b) have a maximum of 6% longitudinal and 15% cross or crown gradient;
 - c) have 1 conveniently located parking space in the mobile home space area, and such parking space shall have a minimum width of 3.0 m and a minimum length of 6.0 m;
 - d) be properly drained;
 - e) be clearly numbered; and
 - f) have a clearly discernible mobile home pad.
- 2) No mobile home shall be located elsewhere in a mobile home park than on a mobile home space, and not more than 1 mobile home shall be located on a mobile home space.

3.2 Mobile Home Standards

- 1) Every mobile home located on a mobile home space shall be supported by a double blocking system of blocking in which blocks of alternate courses are placed at 90 degrees.
- 2) In a mobile home:
 - a) the installation of all woodstoves and chimneys;
 - b) the installation and maintenance of all oil burners and oil-burning equipment and appliances using inflammable liquids as fuel;
 - c) the storage and disposal of inflammable liquids and oils;
 - d) the installation, maintenance, carriage and use of compressed gas systems;
 - e) the plumbing and electrical installation; and
 - f) the connections to services; shall be in accordance with the regulations of the authority having jurisdiction.

- 3) Skirtings shall be installed within 60 days of installation of a mobile home on a mobile home pad.

3.3 Accessory Building and Structures

- 1) One storage shed or utility building may be constructed on each mobile home space provided that the building has:
 - a) a maximum height of 2.5 m;
 - b) a maximum floor area of 9.0 m².
- 2) Common accessory buildings and structures shall be limited to buildings and structures generally intended for the common use of mobile home park occupiers and includes facilities for storage, laundry, service and recreation.

3.4 Owner's or Manager's Dwelling Unit

The space allotted for the owner's or manager's dwelling unit shall be developed in the same manner as a mobile home space where applicable, except where the residence is not a mobile home, then the minimum space allotted shall be 500 m².

3.5 Siting

No part of any mobile home or any addition shall be located within:

- a) 6.0 m of another mobile home or addition thereto;
- b) 2.0 m of an internal access road or common parking area;
- c) 1.5 m of rear and side mobile home space lines;
- d) 6.5 m of any common accessory building.

3.6 Access

- 1) No mobile home park shall be established or extended unless the highway access to the mobile home park is approved by the authority having jurisdiction.
- 2) A second access from a highway separated by at least 60.0 m from the first access shall be provided for each mobile home park containing 50 or more mobile home spaces.
- 3) Access to all parts of a mobile home park shall be by way of the internal access roads and no part of a mobile home park shall have direct access from a highway.

3.7 Layout

The minimum frontage of each mobile home space on the internal access road shall be 12.0 m, except in the case of a mobile home space abutting a cul-de-sac the minimum frontage shall be 6.0 m.

3.8 Internal Access Roads

- 1) All internal access roads within a mobile home park shall be:
 - a) of a hard durable surface so as not to produce dust;
 - b) well drained;
 - c) maintained;
 - d) adapted to the topography.
- 2) The maximum grade of all internal access roads shall be 7%.
- 3) The minimum internal access road width requirements shall be as follows:
 - a) access roads from a mobile home park to a highway shall have a minimum surfaced width of 6.5 m and a right of way width of 15.0 m, and no parking shall be allowed on such internal access roads.

- b) all other internal access roads:
 - i) with parking on both sides shall have a minimum surfaced width of 11.0 m and a right of way of 14.0 m;
 - ii) with parking on one side shall have a minimum surfaced width of 8.5 m and a right of way of 12.0 m;
 - iii) with no parking shall have a minimum surfaced width of 5.0 m and a right of way of 12.0 m.
- 4) Cul-de-sacs shall not exceed 100 m in length.
- 5) Dead-end internal access roads and cul-de-sacs shall have a turning circle right of way at the dead end with a radius of at least 12.0 m.

3.9 Parking

For every 2 mobile home spaces, 1 additional parking space shall be provided, and shall:

- a) be located in the internal access road or in grouped parking areas of no larger than 20 parking spaces;
- b) have a minimum width of 3.0 m and a minimum length of 6.0 m;
- c) be provided and maintained with a hard durable surface that does not produce dust;
- d) be property drained.

3.10 Buffer Area

- 1) To provide a buffer area, no mobile home space shall be located within the setback areas provided in Part 3.4 of this Bylaw.
- 2) Within a setback required pursuant to Part 3.4 of this Bylaw the following shall not be located:
 - a) recreational or service areas, except for waterfront recreation or amenity areas;
 - b) mobile home spaces or the owner's or manager's residence;
 - c) any building or structure, except a fence, a wall or mobile home park identification sign not exceeding 1.5 m² in area;
 - d) a sewage disposal system;
 - e) vehicle parking;
 - f) internal access roads, except those that directly connect the road system of the mobile home park to a highway.

3.11 Recreation Area

- 1) Not less than 5% of the gross site area of the mobile home park shall be devoted to tenant's recreational uses, and shall be provided in a convenient and accessible location; and for the purpose of calculating recreational space requirements, any indoor recreational space provided shall be counted as double its actual floor area.
- 2) The recreation areas shall not include setback areas, parking areas, common accessory buildings, internal access roads and mobile home spaces.
- 3) In mobile home parks where more than 1000 m² of recreation space is required, 2 or more recreation areas may be provided.
- 4) Recreation areas in the mobile home park, except indoor recreation facilities, shall be of grass or asphaltic surface and shall be property landscaped.

3.12 Refuse Disposal

- 1) No person residing in a mobile home park shall dispose of refuse or any sort of waste except in accordance with the arrangements made by the owner or manager of the mobile home park, and approved by the authority having jurisdiction.

- 2) The owner or manager of a mobile home park may establish 1 or more containers within the park for the collection of refuse. Such containers shall be durable, insect-tight, water-tight and rodent-proof.

3.13 Water System

- 1) Pursuant to Part 3.4 of this Bylaw, in the event that the number of mobile homes per mobile home park does not require the provision of a community water system, then every mobile home park shall have a water supply system built to the standards of the Regional District of Nanaimo, as specified in Schedule '4C' of this Bylaw.
- 2) The water supply system shall furnish a constant supply of potable water that is under a minimum working pressure of 200 kPa and not over a maximum working pressure of 350 kPa at all outlets.
- 3) The water supply system shall distribute water to each:
 - a) accessory building, if required;
 - b) mobile home space by a distribution branch line with a minimum diameter of 18 mm;
 - c) hydrant;
 - d) hose bib.

3.14 Sewage Disposal

Pursuant to Part 3.4 of this Bylaw, in the event that the number of mobile homes per mobile home park does not require the provision of a community sewer system, then every mobile home park shall be served by a septic disposal system constructed to the standards of the authority having jurisdiction.

3.15 Fire Hydrants

Fire hydrants meeting the requirements of the Regional District as specified in Schedule '4C' of this Bylaw shall be installed and connected to the internal water supply of a mobile home park so that no mobile home space is beyond 120 m from a fire hydrant, as measured along the internal access road.

3.16 Streetlighting

Streetlighting shall be installed and maintained to adequately illuminate the traveled portion of the internal access roads at the following locations:

- a) the intersection of internal access roads and a highway;
- b) all internal intersections;
- c) the turning circle of cul-de-sacs;
- d) any point at which an internal access road changes direction 30 degrees or more.

REGIONAL DISTRICT OF NANAIMO

BYLAW NO. 500

SCHEDULE '3F'

LANDSCAPING REGULATIONS AND STANDARDS

PART 1 - INTERPRETATION

1.1 Definitions

In this Schedule unless the context otherwise requires:

designated highway means a road listed in Appendix 1 of this Schedule;

fence means a barrier under 2.0 m in height assembled of wooden planks or panels, rock, concrete or brick or any combination thereof;

introduced vegetation means vegetation planted on a parcel to provide a landscape buffer and includes ground covers, vines, shrubs and trees, but specifically excludes weed species;

landscape buffer means an area of preserved natural vegetation, introduced vegetation or a planted berm or any combination thereof;

landscape plan means drawings and specifications, as required by this Schedule, showing proposed landscape buffer or landscape screen;

landscape screen means an area of trees, fences, evergreen vegetation or planted berm or any combination thereof, intended to block or mask from view certain uses as specified in this Schedule;

landscaping means the design, construction and maintenance of a landscape buffer, landscape screen, fencing, land contouring or drainage works;

natural vegetation means vegetation existing on site prior to clearing or cutting and includes vegetation native to Southwestern British Columbia, but specifically excludes weed species;

planted berm means a mound of earth the surface of which is covered by introduced vegetation.

site improvements means the design, construction or maintenance of physical alterations or improvements to land intended to address the safety and functionality of development, including, but not limited to, parking, access or removal of existing structures or buildings.

PART 2 - GENERAL

2.1 Requirement

- 1) A landscape buffer shall be provided within the setback area of a parcel adjacent to a designated highway to provide vegetative landscape separation between industrial, commercial and multiple dwelling unit development uses of the parcel from a designated highway.
- 2) A landscape screen shall be provided within the setback area of a parcel adjacent to a designated highway to mask outdoor storage and outdoor industrial activity of a parcel where storage or industrial activity is taking place in conjunction with an industrial, commercial or multiple dwelling unit use of the parcel.
- 3) Where an owner proposes to use a parcel of land in circumstances or in a manner that requires a landscape buffer or landscape screen pursuant to Section 2.1.1 or Section 2.1.2 of this bylaw, the owner shall submit a landscape plan to the Regional District at the time of:
 - a) application for a building permit;
 - b) actual commencement of the use;
 - c) application for a development permit;
 - d) with respect to those parts of the Regional District not subject to the provisions of "Regional District of Nanaimo Building Regulations and Fees Bylaw No. 800, 1989" at the time of an application to rezone the property.
- 4) All landscaping shall be permanently maintained in good condition with the same quality and quantity of landscaping as was initially approved and without alteration of the approved design; the owner shall make provision for permanent irrigation works necessary to water the landscaping.
- 5) The design of landscaping shall be such that the growth of roots, trunks and branches of natural or introduced vegetation or the location of planted berms shall not conflict with utilities, structures, necessary access or a required sight triangle.

2.2 Procedure

In satisfying the requirements of this Schedule, the applicant shall complete three steps as follows:

1) Landscape Plan

Drawings and specifications of the proposed landscaping, which shall include a schedule of construction and date of completion, shall be submitted in duplicate to the Regional District for approval before any landscape works or building construction are started.

2) Landscape Works

The applicant shall complete the proposed work in accordance with the plans and specifications approved by the Regional District.

The Regional District will inspect the landscaping from time to time for conformity to these standards. There will be no charge for such inspections. The applicant shall be responsible for construction layouts, detailed field supervision of the work and as-constructed drawings.

3) Completion and Acceptance

Once the work is completed two sets of as-constructed drawings shall be submitted to the Regional District.

Completion of the landscaping in accordance with the approved landscape plan is required prior to final building inspection for works under a building permit where a landscape plan was required.

2.3 Drawings and Specifications

Drawings and specifications required for the review of proposed landscaping shall:

- a) be in duplicate, accurately dimensioned and at a suitable scale;
- b) show the location and dimensions of the parcel on which the landscaping is to occur;
- c) show the location and extent of proposed and existing buildings, structures, services, utilities and circulation, including paved and concrete surfaces;
- d) show the existing and proposed grades at a contour interval of 0.200 m and such grades shall be relevant to existing roadways and/or structures;
- e) show the location, size and species of all natural vegetation clearly indicating vegetation that shall remain and vegetation that shall be removed;
- f) show the location, size, quantity and species of all introduced vegetation;
- g) show the location, extent and materials of any proposed fencing;
- h) include sectional details including cross sections of the landscaping taken at sufficient locations to adequately illustrate the effect of landscaping, planting details, finishes and the location at which sectional details are taken is to be noted on a plan;
- i) include such other information as is necessary to illustrate all essential features and methods of planting and construction;
- j) include an outline of the proposed maintenance schedule.

2.4 Variations from Standards

Where the applicant wishes to vary from these standards, the applicant may submit a development variance permit application or development permit application.

2.5 Applicability²

Notwithstanding any other regulation in this Bylaw, the landscaping regulations and standards prescribed herein shall not apply to Electoral Area 'G' of the Regional District of Nanaimo

PART 3 - DESIGN

3.1 Design Standards - Landscape Screen

The following requirements shall be met in providing a landscape screen where required by this Bylaw:

- 1) A landscape screen shall provide at least seventy-five percent screening from grade level to a height of 2.0 m and at least twenty-five percent screening from the height of 2.0 m above grade to 5.0 m above grade, as illustrated in Table 1 of this Schedule.
- 2) The landscape screen shall include planting or retaining one evergreen tree for every 4 m of parcel frontage on a designated highway; such trees shall have a minimum height of 2.0 m and may be grouped or clustered.

² Bylaw No. 500.360, adopted January 25, 2011

3.2 Design Standards - Landscape Buffer

The following requirements shall be met in providing a landscape buffer where required by this Bylaw:

- 1) A landscape buffer shall be a minimum of 5.0 m in width.
- 2) A minimum of 25% of the vegetation shall be evergreen shrubs with a minimum height of 0.5 m, and introduced shrubs shall be a minimum No. 5 pot (5 gallon) nursery standard at the time of planting.
- 3) The landscaping buffer shall include a minimum of one tree for every 10 m of parcel frontage, and such trees shall have a minimum height of 2.0 m and may be grouped or clustered.
- 4) A permanent curb of a minimum 15 cm in height shall be provided to protect landscaping from potential vehicular damage.
- 5) The use of a fence is to be accessory to the use of introduced vegetation, existing vegetation, a planted berm or any combination thereof in satisfying the requirements of a landscape buffer or landscape screen. Advertising display shall not be permitted on fences.

Fences shall be structurally sound and shall be designed and built to withstand wind and snow loads.

3.3 Selection of Introduced Vegetation

- 1) In the selection of introduced vegetation, species shall be selected which satisfy the requirements of screening and are adapted to the site specific conditions of the soil, climate and topography on which such vegetation is to be planted.
- 2) Individual plants to be used in landscaping shall have normal, well developed branches and vigorous fibrous root systems; such plants shall be healthy, vigorous and free from defects, decay, disfiguring roots, sunscald, injuries, abrasions of the bark, plant diseases, insect pests' eggs, borers and all forms of infestation or objectionable disfigurements.

3.4 Planted Berms

The sides of slopes of planted berms within proposed landscaped areas are to be within the following ranges:

Type of Planting	Minimum Slope	Maximum Slope
planted areas with greater than 70% ground cover	1:50	1:2
lawn and grass	1:50	1:3
planted areas with less than 70% ground cover	1:50	1:4

PART 4 - CONSTRUCTION

4.1 Timing

The coordination and scheduling of all work on the site shall be such that no damage occurs to introduced vegetation before or after installation or to natural vegetation to be retained or to existing soil conditions as determined by local weather conditions and the requirements of living plant material.

4.2 General

Imported topsoil shall be free from subsoil, roots, toxic materials, stones over 30 mm in diameter and foreign objects. Topsoil shall be free from crabgrass, couchgrass, equisetum or noxious weeds or seeds or parts thereof.

The working area shall be maintained in an orderly manner and shall not be encumbered with equipment, materials, or debris.

Clean up shall be a continuing process from the start of the work to final acceptance of the project. Property on which work is in progress shall at all times be kept free from accumulations of waste materials or rubbish. Accumulations of waste materials which might constitute a fire hazard shall not be permitted. Spillage from hauling vehicles on traveled public or private roads shall be promptly cleaned up. On completion of construction, all temporary structures, rubbish and waste materials resulting from the operations, shall be removed.

PART 5 - SECURITY DEPOSIT

5.1 Requirement

A security deposit shall be submitted to the Regional District for development permits which include landscaping and/or site improvement provisions.

The security deposit shall be submitted with the application prior to proceeding to the Electoral Area Planning Committee. A detailed planting plan as specified in Section 2.2 shall also be submitted at this time.

5.2 Type and Value of Security Deposit

The security deposit shall be in the form of either a standby irrevocable letter of credit, cash, or a certified cheque, or other acceptable equivalent, and shall be submitted in a form satisfactory to the Regional District.

The value of the security deposit shall be equal to the estimated total cost (i.e., materials and installation) of all of the required landscaping and/or site improvements. The total cost of these works shall be estimated as follows:

- a) \$50.00 per square metre of landscaping as indicated on submitted plans; and
- b) The cost of site improvements shall be determined by an itemized cost estimate of materials and installation. The cost estimate is to be completed by a professional landscape architect, a nursery person or landscape contractor or an equivalent agreed upon by the Regional District, and is to be submitted at the time of application. The developer assumes sole responsibility for undertaking and financing the cost estimate.

5.3 Release of Security Deposit

The security shall be released following the completion of all approved landscaping and/or site improvement works as specified in the development permit to the satisfaction of the Regional

District. A one-year written guarantee from a landscape contractor is also required, otherwise 25% of the landscaping cost will be retained to ensure proper maintenance for one year period.

In the event that the landscaping and/or site improvements are at variance with approved works and/or not completed to an acceptable standard and/or not completed within a specified time period, the Regional District may use the security deposit for the purpose of entering upon the subject property and completing the approved works and/or for pursuing any necessary legal or court judgment as required.

In the event that additional time is required to complete the landscaping and/or site improvements due to unforeseen circumstances, a written request shall be made to the Planning Department indicating the reason for an extension and the expected date of completion.

When a security deposit is in the form of a standby irrevocable letter of credit, it shall include provisions for its extension and/or renewal in the event that works cannot be completed before its expiry date. A minimum of 45 days notice of the need for an extension is required. Alternatively, and upon approval by the Regional District, a new standby irrevocable letter of credit with a revised expiry date shall be provided to the Regional District in these situations.

REGIONAL DISTRICT OF NANAIMO

BYLAW NO. 500

PART 4

SUBDIVISION REGULATIONS

PART 4 - SUBDIVISION REGULATIONS

4.1 Subdivision Districts

- 1) For the purpose of this Bylaw, the area described in the section of this Bylaw entitled **Application** is hereby divided into subdivision districts as provided in Schedule '4B'.
- 2) The extent of each subdivision district is shown on Schedule '4A'.
- 3) Where a subdivision district boundary does not follow a legally defined line, and where the distances are not specifically indicated, the location of the boundary shall be determined by scaling from Schedule '4A'.
- 4) Where a subdivision district boundary is designated as following a highway or watercourse, the centreline of the highway or the natural boundary of the watercourse or centreline of a creek shall be the subdivision district boundary.
- 5) Any land not included in any subdivision district by Schedule '4A' shall be deemed to be in Subdivision District A.

4.2 Prohibition

Land shall not be subdivided contrary to this Bylaw.

Subdivision Standards

4.3 Parcel Size

- 1) Minimum parcel size requirements for each subdivision district shall be in accordance with Schedule '4B'.
- 2) A panhandle shall not be considered part of a parcel for the purpose of calculating parcel size in any subdivision district described in this Bylaw.
- 3) The minimum parcel size shall be increased as necessary:
 - a) to suit the topography; and
 - b) to ensure that the gradient of an access driveway or a panhandle to service the proposed lots shall not exceed 20%.
- 4) Parcels within land to be subdivided may be reduced to 80% of the size otherwise permitted in the applicable subdivision district, provided that:¹
 - a) a maximum of 50% of the proposed parcels within the land to be subdivided may be reduced in size, unless a higher percentage has been approved by way of a development variance permit; and
 - b) the average parcel size of all parcels within the subdivision conforms with the parcel size permitted in the applicable subdivision district; and
 - c) a restrictive covenant in favour of the Regional District is registered against all parcels in the subdivision prohibiting further subdivision of the land unless the largest parcel created within the subdivision is less than twice the minimum parcel size applicable to that parcel at the time of subdivision.

¹ Bylaw No. 500.13, adopted October 13, 1987

4.4 Parcels Exempt from Minimum Parcel Size Requirements

- 1) Where the requirements of the authority having jurisdiction are met with respect to the provisions of water and method of sewage disposal, minimum parcel size and parcel servicing regulations shall not apply to a subdivision:
 - a) combining 2 or more parcels into a single parcel;
 - b) where the effect of subdivision would not be to increase the number of parcels, but to adjust the boundary between existing parcels, provided that the boundary change does not result in the reduction of either parcel by 20% or more of its original size;
 - c) adding an accretion to a parcel.

- 2) Parcels which consist of 2 or more parts physically separated by:
 - a) a highway which was dedicated prior to the adoption of this Bylaw;
 - b) the Nanaimo River, the Englishman River, the Little Qualicum River, or the Qualicum River;
 - c) a railway under jurisdiction of the applicable **Railway Act** and amendments thereto; may be subdivided along the dividing highway, the natural boundaries of the noted rivers, or the railway even when the newly created parcels fail to meet the minimum parcel size requirements of this Bylaw, provided the requirements of the authorities having jurisdiction are met with respect to the provision of water, method of sewage disposal and access.

- 3) Parcels proposed for subdivision pursuant to Section 946 of the **Local Government Act** shall be permitted provided that:¹
 - a) all requirements of provincial legislation are satisfied; and
 - b) the new parcel being created by subdivision is a minimum of 1.0 ha²; except where the parent parcel was connected to a community water service prior to the adoption, on June 10, 2003 of the “Regional District of Nanaimo Regional Growth Strategy Bylaw No. 1309, 2002”, then the minimum parcel size shall be no less than 2500m²; and
 - c) the size of the remainder of the parcel is the minimum size required under Schedule '4A' and '4B' of this Bylaw; and
 - d) all other requirements of this Bylaw are met.

Design and Servicing Standards

4.5 Parcel Shape and Dimensions

- 1) The depth of each parcel of land in a subdivision shall not exceed 40% of the length of the perimeter of the parcel, excluding any panhandle, unless the proposed subdivision will create parcels substantially closer to compliance with this provision than the existing parcel.

- 2) Unless the pattern of existing subdivision precludes it, side lot lines shall, wherever practicable, be created perpendicular or radial to the adjoining highway.

¹ Bylaw No. 500.69, adopted September 8, 1992

² Bylaw No. 500.320, adopted November 22, 2005

- 3) No panhandle shall be created:
 - a) narrower than 10.0 m where further subdivision of the parcel is possible; or
 - b) narrower than 6.0 m where further subdivision is not possible.
- 4) No parcel shall be created which is divided into 2 or more non-contiguous portions of land not included within the parcel or remainder, except a remainder which is divided into non-contiguous portions by the width of a highway allowance, provided that:
 - a) such a highway was in existence prior to the subdivision; and
 - b) it is impracticable to establish the non-contiguous portions as separate parcels.

4.6 Highway Requirements

- 1) No proposed highway to be dedicated by a plan of subdivision shall be shown on a plan, dedicated, laid out or constructed unless the design, dimensions, locations, alignment and gradient meet the requirements for highways, as established from time to time, by the Ministry of Transportation.
- 2) Additional dedicated rights of way of up to 6.0 m may be required for bus stop areas near key intersections.
- 3) A subdivision pursuant to the **Strata Property Act** and amendments thereto the following minimum access route standards shall apply along with any further requirements by the Ministry of Transportation:¹

PAVED WIDTH	PARKING
6.0 m	On street parking not permitted - parking provided in accordance with Schedule '3B'
8.5 m	On street parking permitted on one side

4.7 Sewage Disposal

- 1) Where a parcel is created and is not served by a community sewer system the authority having jurisdiction must be satisfied as to the sewage disposal capability of the parcel.
- 2) Any community sewer system, or part thereof, provided within the subdivision, to service the subdivision or to connect the sewage collection system within the subdivision to a Regional District trunk sewage main shall, if constructed after the enactment of this Bylaw, be constructed and installed at the expense of the owner of the land being subdivided and shall be carried out in accordance with the standards and specifications set out in Schedule '4D'.
- 3) Notwithstanding Section 4.7 (1), for lands within the Lakes District and Schooner Cove Community Water and Sewer Standards Area, all parcels shall be serviced by a community sewer system.²
- 4) Notwithstanding Section 4.7 (2), for lands within the Lakes District and Schooner Cove Community Water and Sewer Standards Area, any community sewer system, or part thereof, provided within the subdivision, to service the subdivision or to connect the sewage collection system within the subdivision to a Regional District trunk sewage main

¹ Bylaw No. 500.61, adopted March 27, 1990

² Bylaw No. 500.388, adopted July 22, 2014

shall, be constructed and installed at the expense of the owner of the land being subdivided and shall be carried out in accordance with the standards and specifications set out in Schedule '4D1'.¹

4.8 Water Supply

- 1) Where a parcel to be created is not to be served by a community water system and is less than 5.0 ha in area, the applicant shall provide reasonable proof to the satisfaction of the Approving Officer that a minimum year-round potable water supply of 3.5 m³ per day can be provided for each parcel being created.
- 2) Any community water system, or part thereof, provided within the subdivision, to service the subdivision or to connect the water distribution system within the subdivision to a Regional District trunk water main shall, if constructed after the enactment of this Bylaw, be constructed and installed at the expense of the owner of the land being subdivided and shall be carried out in accordance with the standards and specifications set out in Schedule '4C'.
- 3) Notwithstanding Section 4.8 (1), for lands within the Lakes District and Schooner Cove Community Water and Sewer Standards Area, all parcels shall be serviced by a community water system.²
- 4) Notwithstanding Section 4.8 (2), for lands within the Lakes District and Schooner Cove Community Water and Sewer Standards Area any community water system, or part thereof, provided within the subdivision, to service the subdivision or to connect the water distribution system within the subdivision to a Regional District trunk water main shall, be constructed and installed at the expense of the owner of the land being subdivided and shall be carried out in accordance with the standards and specifications set out in Schedule '4C1'.³
- 5) The standards and specifications set out in Schedule '4C' do not apply to community water system owned, operated and maintained by a municipality or an improvement district, or a community water system which is operated by a person required to hold a certificate of public convenience and necessity under the **Water Utility Act**.⁴

4.9 Exception

Subdivision regulations to not apply to:

- a) parcels to be used solely for unattended public utility use;
- b) park.

1. GENERAL

1.1 Requirement

Water supply and distribution systems shall be designed, installed, extended, tested and maintained in accordance with the following regulations and standards.

1.2 Design

The engineering design of the water system shall be carried out by, and the construction of drawings and specifications shall be sealed by, a registered Professional Engineer, and shall conform to these Standards.

1.3 Application

All applications shall be made in three steps as follows:

1) Feasibility Review

All proposed construction of water supply and distribution facilities shall be submitted to the Regional District for a feasibility review prior to commencement of any detailed design or construction. Such requests shall include a plan of the proposed construction and the area it will serve.

The Regional District will review the proposal, and reply with a written report indicating the District's decision regarding acceptance or rejection.

2) Detailed Design

The detailed design and specifications shall be submitted in duplicate to the Regional District for approval prior to construction.

The detailed plans will be returned either approved or with a request for re-submission. Re-submission will be carried out until the Regional District approves the detailed plans and specifications.

The District shall submit the detailed plans and specifications to the Provincial Ministry of Environment, approval from which is also a prerequisite to the start of construction.

3) Completion and Acceptance¹²

Once the work is completed, a statement signed by a registered Professional Engineer shall be submitted to the Regional District along with two sets of as-constructed drawings certifying that the project has been constructed under his supervision, and that it is completed in accordance with the as-constructed plans and specifications. One set of these as-constructed drawings shall be on 3 mil mylar material. This statement shall include a report on the leakage testing and chlorination of the system.

The Regional District shall then make a final inspection, and when it is satisfied the work is acceptable the applicant shall:

- a) guarantee the workmanship and the performance of the work for a period of one year by way of cash or an irrevocable letter of credit in the amount

¹² Bylaw No. 500.13, adopted October 13, 1987

- of 5% of the cost of construction as certified by a professional engineer;
and
- b) convey the works to the Regional District.

Upon compliance with the above items, the Regional District shall issue a written statement that the new works can be connected to the District's existing system. Such connection shall be undertaken by the applicant under the direct supervision of the District or by the District at a cost to the applicant.

1.4 Drawings and Specifications

All drawings shall be ISO A1 size, 594 mm in depth and 841 mm in width. The following information shall be supplied:

- 1) **Location Plan** - showing the location of the proposed work. This may appear on the same sheet as the Key Plan.
- 2) **Key Plan** - showing a plan of the proposed work at a suitable scale such that the whole works are shown on one drawing, usually 1:5000, 1:2000 or 1:1000. The Key Plan shall show a general outline of the works, area covered and sheet numbers of the plan/profile drawings, and a legend showing existing and proposed works.
- 3) **Plans/Profiles** - showing detailed design of the proposed works. Profiles of mains 200 mm in size and under are not required unless otherwise specified by the Regional District.

Plans shall be drawn at a scale of 1:500 showing the location of the pipe centreline, pipe size and type and off-set from property line, hydrants, valves, fittings and all related appurtenances in relation to road, easement and adjacent property and lot lines. Existing or proposed underground utilities are to be indicated on the plan in addition to the extent of work required in making connection to existing water main. Location of service connections are to be shown. Connections not conforming to the standard offset require a distance from an iron pin or lot line. In general, water services shall be installed two in a trench at property corners, 1200 mm from the lot line, and alternate with hydro and telephone poles.

Profiles shall be drawn at a horizontal scale of 1:500 and a vertical scale of 1:50 if more suited to specific conditions. The profile shall show the line of the existing and finished road grade on centreline, the invert of the pipe, location of fittings and hydrants, and location of sanitary and storm utilities. Where the pipe is not to be laid at a constant depth below the finished grade, the invert elevation shall be shown at pipe deflections and vertical bends.

Drawings detailing plans and elevations shall be prepared for wells and wellheads, supply intake works, pump stations, major valve chambers, and storage reservoirs. Suitable standard scales shall be chosen, being either 1:50, 1:20, 1:10, or 1:5.

- 4) **Specifications** - shall be prepared to further define materials of construction and shall specify methods of construction and workmanship.
- 5) **As-Constructed Drawings** - shall be prepared by correcting drawings on completion of construction in order to reflect "as-built" conditions for permanent records. The location of all individual lot water service connections shall be clearly shown.

1.5 Variations From Standards

Where the applicant wishes to vary from these standards he shall submit a written request with adequate supporting data to the Regional District for review. The Regional District shall make the final decision as to the standard requirements which shall apply.

1.6 Permits

The applicant shall be responsible for obtaining all necessary approvals and permits required prior to construction of the water system other than the Environmental Engineering Division of the Ministry of Environment.

1.7 New Service Areas

Where a water system is to be constructed by an applicant within an area previously unserved by a community water system, the design and construction for the system shall comply with the requirements of these Standards.

1.8 Existing Service Areas

Where a water system is to be constructed by an applicant within the existing or extended boundaries of an area already being served by a community water system, the design and construction of the system shall comply with the requirements of these Standards, with the exception of Sections 2.5 and 2.6 which do not apply.

1.9 Inspection

The Director of Public Works of the Regional District or his appointed deputies shall be allowed access and provided adequate facilities for access to any part of the works at all times for the purpose of inspection.

Any connections to or interruption of any existing system will be under the direct supervision of the Regional District. Adequate notice to the Regional District of any such interruption to service shall be required in order that attendance by Regional District personnel can be arranged.

2. DESIGN

2.1 Water Demand

Water sources and primary supply mains shall be designed to supply the maximum day's demand, while distribution mains and booster pump stations must be sized to handle the peak hourly or fire flows. The volume of water in storage acts as a cushion between these differing flows.

The water distribution system shall be designed according to the following minimum demands:

1) Residential

Average daily per capita	0.48 m ³
Maximum daily per capita	1.18 m ³
Maximum peak per capita	1.93 m ³

2) Commercial and Industrial

Water demands for developments involving commercial or industrial zoned lands shall be in accordance with good engineering practice as determined by the Regional District.

3) Fire

Required fire flows shall be in accordance with the "Water Supply for Public Fire Protection - A Guide to Recommended Practice" as published by Public Fire Protection Survey Services.

2.2 Water Pressure

Minimum design distribution pressure in all areas at peak demand shall be 275 kPa. With the combination of maximum daily demand and the specified fire flow, the minimum residual water pressure at the fire hydrant shall be 138 kPa. Where these minimum design pressures cannot be maintained due to an increase in elevation or distance from the point of connection, a booster pump station and emergency storage shall be provided as part of the distribution system.

The maximum allowable distribution line pressure is 900 kPa except where individual connections are permitted directly from trunk mains and where special precautions are taken. Otherwise, where distribution pressures will exceed 900 kPa due to a drop in elevation, a pressure reducing station shall be installed as part of the distribution system. Where distribution pressures exceed 550 kPa, occupants in the area shall be required to install individual pressure reducing valves. This valve shall be of an approved design and manufacture.

2.3 Design Population

Design populations used in calculating water demand shall be computed in accordance with the population predictions as determined by the Regional District or with the persons/hectare:

Multiple dwelling unit development	125 persons/hectare
Dwelling unit	30 persons/hectare

2.4 Hydraulic Network

Depending on the complexity and extent of the proposed distribution system, the Regional District may require a hydraulic network analysis diagram showing maximum design flows and pressures. If this information is required, it shall be stated at the time of the feasibility review and shall be submitted by the applicant with the detailed design application. The hydraulic network shall be designed to distribute the maximum design flows at the pressures specified in this Standard.

2.5 Water Quality

- 1) Water supplied to domestic consumers shall be of a quality meeting the standards set by the Environment Engineering Division of the Ministry of Environment.
- 2) All surface water supplies shall be chlorinated.
- 3) Groundwater sources may require chlorination, at the discretion of the Ministry of Environment.

2.6 Supply Sources

1) Groundwater Source

Where groundwater is to be the source of supply, a copy of the well driller's log shall be submitted, together with a copy of a well completion report certified by a professional engineer or a groundwater geologist. Wells shall be cased, with a stainless steel slotted screen selected following sieve analysis of aquifer material, and shall have a grouted surface casing. The completion report shall record results of well pump tests, and contain conclusions as to the capability of the source to meet the design demand with a 30% percent safety factor under conditions of zero surface recharge for 100 days. The well pump test shall consist of a minimum of 24 hours continuous pumping, but in no case less time than it takes to produce a stable water level in the well for an adequate period. The Regional District may call for a quantitative and qualitative report by a groundwater geologist where unusual conditions or results occur.

Wellhead piping shall consist of an air release valve, check valve, turbine flow meter, pressure gauge, and gate valve to throttle flows to recommend output. A hose bib shall be provided to permit periodic Ministry of Environment sampling. The wellhead building or enclosure shall be designed such that future access to the well is available for pump removal or well redevelopment. A means of monitoring static and pumping levels in the well shall be provided. Flow recording may be required for some installations.

Wellhead buildings or enclosures shall be designed to provide adequate heating and insulation, lighting and ventilation.

2) Well Pump Controls

Each pump shall have a combination motor starter with a motor circuit protector, a "hand-off-auto" selector switch, a green "pump run" pilot light, a red "pump failed" pilot light and an elapsed time meter.

Motor starters for submersible well pumps shall be equipped with quick-trip overload relays. Low level draw-down protection shall be provided utilizing electrodes suspended in the well. Restart of the pump shall be automatic when the water level in the well has recovered sufficiently, however, a red alarm light on the control panel shall require manual reset.

If the system consists of more than one pump, supplied from the same service, the control circuits shall be subdivided into branch circuits in such a manner as not to shut down the entire system if one pump circuit develops a fault. Also, time delays shall be provided to permit staggered re-start of the pumps after a power failure.

The pump control panel shall have protection against single-phasing and a red pilot light which will stay on until manually reset after a power failure.

If the system consists of more than one pump, an automatic alternator or manual lead pump selector switch shall be provided.

A single-pole, double-throw (SPDT) contact shall be provided for remote alarm purposes, which will be activated in the event of pump failure, motor overload, power failure of low well level. An external alarm light may also be required for some installations.

Signal cables for pump control shall be directly buried, either alongside connecting pipelines or in a separate trench, wherever feasible. Cable warning tape shall be installed in the trench over signal cables.

3) Surface Water Source

Where surface water is to be the source of supply a certification by a professional engineer shall be provided as to the adequacy of the source to meet the design demand with adequate safety factors, under conditions of normal low rainfall, and under conditions of zero rainfall for 100 days.

The applicant shall be responsible for obtaining any necessary water licenses in the amount of the design demand, and for meeting all the requirements of the Water Rights Branch, Ministry of the Environment, British Columbia.

Surface water inlet works are to be located to provide optimum water quality, and shall be suitably screened. Access is to be provided to the inlet point for maintenance purposes. Inlet piping shall include a flow meter, pressure gauge, gate valve and a hose bib located to permit periodic sampling. Chlorination shall be provided at a suitable location. Flow recording may be required for some installations.

2.7 Storage

1) Sizing

Reservoirs shall be sized to provide the greater of either

- a) storage volume to provide water to meet 66 percent of an average day's demand; or
- b) storage volume to provide water to meet the fire flow requirements plus 20 percent of a maximum day's demand.

2) Design

The materials and designs used for finished water storage structures shall provide stability and durability as well as protect the quality of the stored water. Steel structures shall follow the current AWWA Standards concerning steel tanks, standpipes, reservoirs, and elevated tanks wherever they are applicable. Other materials of construction shall be acceptable when designed in accordance with the Building Regulations of British Columbia and amendments thereto.

The foundation may be designed either with the bottom at ground level, bearing on a slab or ring beam or on legs with the bottom in an elevated position.

Foundation design shall be in accordance with Building Regulations of British Columbia and amendments thereto. A foundation or soils investigations report shall be submitted.

In addition to the seismic requirements of the Building Regulations of British Columbia due account shall be taken of the effects of both convective and impulsive forces generated by ground motion. Sufficient clearance shall also be provided between high water level and roof soffit to allow for wave generation.

The reservoir structure shall be designed to safely withstand all construction and operating loads.

Reservoirs shall be totally enclosed with adequate ventilation, screened and weather protected. Vents shall project above the highest anticipated depth of snow on the roof.

Wood and concrete reservoirs shall be provided with a roof access hatch served by internal and external ladders.

Steel reservoirs shall be provided with a roof access hatch served by an external ladder and low level access manhole.

Access ladders, safety cages, and platforms shall comply with the requirements of the Worker's Compensation Board. Fencing of the reservoir site may be requested by the Regional District.

An altitude gauge shall be provided at an elevation of 1.2 m above the reservoir foundation.

Inlet piping is to discharge into the reservoir above TWL elevation. A bell mouth outlet set 150 mm to 300 mm above the reservoir floor, a valved drain set at floor level, and an overflow pipe shall be provided.

Alarms requiring manual reset shall be provided to indicate reservoir high or low level. In a water system consisting of well or booster pumps, these alarms shall be transmitted along buried signal cables to a central location. Controls may utilize probes or transmitters. Where the reservoir is supplied via pumped water, pump start-stop controls will be required. The Regional District may require individual start-stop levels for each pump, or staggered pump start-stop on a time basis.

The Regional District may require the installation of flow meters, flow recording and level recording equipment on a reservoir.

2.8 Water Distribution Piping

1) Materials

Unless otherwise permitted, the following pipe materials shall be used for water distribution:

Material	Specifications
Asbestos Cement	AWWA C400
Steel Pipe	AWWA C200
Ductile Iron Pipe	AWWA C151
PVC Pipe	AWWA C900 - Class 150, DR 18 maximum

Steel pipe shall be coated and lined in accordance with AWWA C203. Ductile iron pipe shall be cement mortar lined in accordance with AWWA C104. Joints shall be rubber gasket in accordance with AWWA C111. Where corrosive soil conditions exist the Regional District may require special protection for the pipe. All pipe shall be designed for the maximum pressures and earth loading to which the pipe will be exposed, but in no case shall the design working pressure or class be less than 1030 kPa.

2) General Layout

Numerous trunk lines and secondary feeders shall be installed throughout the system. These mains must be large enough to deliver consumption and fire flow demands for the district served, and shall be spaced not more than 900 m apart and looped.

Minor distributors and pipes of the gridiron system shall be a minimum of 150 mm in diameter in residential districts with 150 mm diameter cross mains at intervals not exceeding 180 m. Where no longer lengths of pipe are necessary 200 mm diameter or larger intersecting main shall be used unless initial pressures are unusually high. 200 mm diameter pipe shall be used where dead ends or poor gridironing are likely to exist for a considerable period, or where the layout of the streets and the topography are not adapted to the above arrangement. Lines furnishing domestic supply only, and not serving hydrants, may be 100 mm diameter. Where a water main ends in a dead end, or a valve is normally closed, a fire hydrant or blow off shall be provided for flushing purposes. The blow pipe and valve shall be less than 65 mm. No blow off shall be connected to a sewer. Fire hose connection and cap shall be required at the end of the blow off.

In the high value districts, the minimum size shall be 200 mm diameter. Pipe of 300 mm diameter is to be used on major highways as identified in the Official Community Plans of the Regional District and for long lines not cross-connected.

2.9 Service Connections

Unless otherwise permitted, only the following materials may be used for service connections:

Material	Specifications
Soft Copper, Type K	ASTM B88
Plastic	ASTM D2666

In the larger sizes, the materials specified in Section 2.8 for water distribution may also be used.

Table 1 shows the general arrangement for water service connections. The minimum size of service connection is 20 mm diameter. Corporation stops shall be Mueller A-225 or approved equal. Curb stops shall be Mueller A-618 or approved equal, flared on the street side and female iron pipe on the property side. Drain holes in curb stops shall not be permitted. Curb boxes shall be Brooks 37 Series or approved equal with cover set at ground level. Curb stops shall be set on main side of the meter box to facilitate meter installation when required. Saddle clamps shall be used as specified by the manufacturer.

Water service connection locations shall be co-ordinated with B.C. Hydro and Power Authority and the B.C. Telephone Company to avoid any conflict with poles at the property lines of parcels.

2.10 Fire Hydrants

Hydrants shall be in accordance with AWWA C502, compression type. The minimum hydrant size shall be 150 mm diameter. The minimum depth of bury shall be 1.0 m. There shall be a minimum of two 65 mm house outlets and one pumper outlet 117.5 mm P4.23, outside diameter male outlet complete with caps per hydrant. One of the outlets shall have an independent shut-off. Opening for both the main hydrant valve and independent shut-off shall be to the left (counter-clockwise). Outlet threads shall conform to the British Columbia Fire Hose Thread Specification. Main valve spindle and outlet nuts shall be standard pentagon shape. Main valve spindle: pentagon in 45 mm circle. Independent spindle: square 16 mm x 16 mm. Drain outlets are to be provided.

Table 2 of this Schedule shows the general arrangement for the installation of hydrants. Connections shall not be less than 150 mm diameter. A gate valve will be provided on all connections between the hydrant and the main. Installations shall be in general accordance with AWWA M17.

Hydrant distribution shall be in general conformance with the aforementioned Standard of Municipal Fire Protection, but in all cases spacing shall be such that the maximum distance from a hydrant to the centre of any property measured along the centreline of the street is 75 m. Hydrants will be set in 6 m from the corner at any intersection to facilitate future widening or other street works.

2.11 Valves

Unless otherwise permitted, only the following valves shall be installed in the distribution system:

1) Gate Valves

Gate valves shall be in accordance with AWWA C500 and the following supplementary data:

- a) Gate valves shall have an iron body, brass mounted.
- b) Valves shall be the same size as the pipe in which they are installed, up to and including 300 mm diameter. In mains over 300 mm diameter, valves may be butterfly type.
- c) Valve ends shall be provided to fit the pipe.
- d) The position of the valve in line shall be vertical.
- e) Stem seals shall be O-ring.
- f) Valves shall open to the left (counter-clockwise).
- g) Gears will be required on valves 400 mm and larger. Gear cases shall be totally enclosed.
- h) Bypasses will be provided on valves 500 mm in diameter and larger.
- i) Valves shall have a 50 mm operating nut.

2) Rubber Seated Butterfly Valves

Rubber seated butterfly valves shall be in accordance with AWWA C504 and the following specifications:

- a) Valves shall be the same size as the pipe in which they are installed. Valves shall be of wafer style or short body flanged.
- b) Valve ends shall suit the pipe.
- c) Maximum nonshock shut off pressure shall be suitable for 1030 kPa, bubble tight.
- d) Valves shall be designed for the extreme maximum flows for both opening and closing.
- e) Shaft seals shall be O-ring type.
- f) Valve disks shall be ductile iron.
- g) Valve operators shall be suitable for buried installation and equipped with a standard operating unit.
- h) Valves shall open to the left (counter-clockwise).
- i) Operators are to be located on the side of the valve with the operating spindle in the vertical position.

In general, valves shall be located at intersections and shall be so positioned that no more than 150 m for high value district and 250 m for other areas are isolated in the case of line repairs. In larger trunk and feeder mains where no interconnections are made, the spacing of valves should not exceed 500 m.

Thrust blocking or other restraints shall be provided on all valves.

Where valves are located in the roadway, valve boxes shall be Nelson Type of cast iron and telescoping so the surface loads are not transmitted to the valve body of pipeline. A minimum of 300 mm of adjustment shall be available on all valve boxes. Cast iron hoods shall be provided on all gate valves 250 mm diameter or larger. In areas where there is no traffic, valve boxes may be as approved by the Regional District.

Valve markers shall be installed to indicate the location of all valves. These markers shall be constructed of 50 mm metal pipe painted sky blue and set in a concrete base. They shall extend 1 m above the ground surface. The markers shall be located 2 m from the property line opposite the valve and the distance to the valve is to be marked in black figures on a flattened upper portion of the marker.

2.12 Fittings

Fittings shall be designed for a minimum of 1030 kPa working pressure and shall be in accordance with AWWA C110. Ends shall be flanged or belled to suit pipe ends. Flanges shall conform in dimension and drilling to ASA B16.1, Class 125. Flange gaskets shall be of natural rubber and shall be 3mm thick with a layer of cotton on both sides. Thrust blocks shall be provided as shown in Figure 3. For sizes larger than 300 mm diameter, or where pressures exceed 1030 kPa, or where allowable soil bearing pressure is less than 100 kPa, separate thrust calculations shall be carried out for each fitting and separate details shown.

2.13 Trenching and Backfill

The standard trench section is shown in Table 4 of this Schedule. The nominal depth of cover shall be 1.2 m but in no case shall it be less than 1.0 m unless otherwise permitted by the Regional District. Water mains shall be located not less than 3 m from all sewer lines, unless otherwise permitted by the Regional District.

2.14 Pressure Reducing Stations

General requirements for pressure reducing stations shall be as follows:

- 1) A valved bypass shall be provided.
- 2) A surge relief valve shall be provided to release pressure in the event of a failure of the pressure reducing valve(s). The surge relief valve may be incorporated into the pressure reducing station or may be located at some other suitable location within the distribution system.
- 3) Pressure reducing valves shall be sized to provide adequate pressure control through all ranges of design flows. If necessary, two or more pressure reducing valves of varying sizes will be provided in the one station.
- 4) Each pressure reducing and surge relief valve will be provided with isolating valves and be installed so that individual components may be easily removed for repair or replacement.
- 5) The whole of the pressure reducing stations shall be enclosed in a reinforced concrete vault with a standard manhole cover and other opening large enough to remove the largest single piece of equipment in the station. Floor drains sloped at 2 percent shall be provided to keep the station dry at all times and shall not be

directly connected to any sewer. Drains to the surface are permissible if there is no risk of flooding. Otherwise, underground absorption pits or sump pumps will be required depending on site condition. A permanent access ladder will be installed.

- 6) Pressure gauges complete with snubbers shall be installed to register both upstream and downstream pressure.
- 7) Adequate strainers shall be supplied on the water used for controlling and regulating valves.

2.15 Booster Pump Stations

General requirements for booster pump stations shall be as follows:

- 1) A valved bypass shall be provided.
- 2) There shall be sufficient capacity so that, with the most important pump out of service, the station will be capable of supplying the maximum design flow.
- 3) It may be requested that provision be made to provide the maximum design flow during a power failure. Normally this will be accomplished by means of an elevated storage tank. Where this is not possible, emergency standby internal combustion engines shall be installed either for direct drive or electric generation.
- 4) Where design flows are such that starting and stopping surges will cause water hammer in the inlet or discharge lines, pump control valves or other pressure control devices shall be provided. Relief valves will also be required to protect against surges caused by power failure.
- 5) Pumps shall be controlled by automatic devices satisfactory to the Regional District. Flow and pressure measurement shall be provided where required. Flow recording may be required for some installations. Signal cable for pump control shall be directly buried, either alongside connecting pipelines or in a separate trench, wherever feasible. Cable warning tape shall be installed in the trench over signal cables.
- 6) Pumps shall normally be housed in above ground buildings, designed to provide adequate insulation, heating, lighting and ventilation.
- 7) Each pump shall have a combination motor starter with a motor circuit protector, a "hand-off-auto" selector switch, a green "pump run" pilot light, a red "pump failed" pilot light and an elapsed time meter.

If the system consists of more than one pump, supplied from the same service, the control circuits shall be subdivided into branch circuits in such a manner as not to shut down the entire system if one pump circuit develops a fault. Time delays shall be provided to permit staggered re-start of the pumps after a power failure.

The pump control panel shall have protection against single-phasing and a red pilot light which will stay on until manually reset after a power failure.

If the system consists of more than one pump, an automatic alternator or a manual lead pump selector switch shall be provided. Time delays or other means suitable to prevent hunting on momentary pressure surges shall be provided.

The pumps shall be shut down and stay locked in the event of motor high temperature or motor overload. The pumps shall also shut down on low suction pressure, however, re-start shall be automatic when the section pressure recovers, except that a red pilot light shall stay on until manually reset.

A single-pole, double-throw (SPDT) contact shall be provided for remote alarm purposes, which will be activated in the event of pump failure, motor high temperature, motor overload, low suction pressure, power failure or standby engine failure (if applicable). An external alarm light may also be required for some installations.

3. CONSTRUCTION

3.1 General

1) Access Roads

Temporary roads shall be constructed as required for access to the working areas. Adequate drainage facilities in the form of ditches, culverts, or other conduits shall be installed as found necessary to maintain these roads. In the construction of access roads, existing drainage facilities, natural or otherwise, shall not be disturbed to the detriment of properties outside the working area and such facilities shall, unless otherwise provided elsewhere in the specifications, be restored to their original condition on completion of the work.

2) Sanitary Facilities

Clean, sanitary latrine accommodations shall be provided and shall be located and maintained in accordance with the regulations of the Ministry of Health.

3) Special Tools, Operating Manuals, Shop Drawings

With each piece of mechanical and electrical equipment or machinery having wearing parts and requiring periodical repair and adjustment, all special tools, wrenches, and accessories required for removing worn part, making adjustments, and carrying out maintenance shall be supplied. All gauges, indicators, and lubricating devices necessary for the proper operation of the equipment shall be furnished.

With each piece of equipment, 4 sets of operating manuals and as-constructed shop drawings, shall be supplied. The manuals shall provide the manufacturer's recommended maintenance schedules with the grades of lubricants required, and instructions as to how the equipment may be taken apart for periodical inspection and replacement.

4) Blasting

Blasting will be permitted only after securing the approval of the applicable authorities. Blasting will not be carried out without first verifying that insurance covers any loss of life or damage that may result from this work. The Regional District, in granting approval for blasting, does not in any way assume responsibility for injury, loss of life, or damage that result therefrom, and such approval shall not be construed as approval of the methods employed in blasting, the sole responsibility therefore being that of the applicant.

5) Site Maintenance and Clean Up

The working area shall be maintained in an orderly manner and shall not be encumbered with equipment, materials, or debris.

Clean up shall be a continuing process from the start of the work to final acceptance of the project. Property on which work is in progress shall at all times be kept free from accumulations of waste materials or rubbish. Accumulations of waste materials, which might constitute a fire hazard, shall not be permitted. Spillage from hauling vehicles on traveled public or private roads shall be promptly cleaned up. On completion of construction, all temporary structures, rubbish, and waste materials resulting from the operations, shall be removed.

3.2 Existing Structures and Utility Works

1) Scope

Existing structures shall be interpreted as being all existing pipes, ducts, ditches, or other works forming a part of sewerage, drainage, water, telephone, electrical, gas, or other utility system, as well as sidewalks, curbs, poles, fences, buildings, and other man-made things that may be encountered during construction.

2) Material Supply

Unless specified otherwise, materials supplied for replacement of existing structures shall be at least equal to those being replaced.

3) Location of Structures

Drawings or descriptions, verbal or otherwise, of existing structures or their location that are supplied by the Regional District are intended only as an aid to locating these structures. Measurements and location of the existing underground structures shown on the drawings are not guaranteed to be accurate, and must be verified prior to proceeding with construction.

4) Protection of Structures

Unless authorization from the Regional District is received for their removal, underground and surface structures encountered during construction shall be protected from damage. In the event of damage resulting from the construction operation, structures shall be repaired or replaced to a condition, which is at least the equivalent of that which existed prior to construction.

5) Emergency Situations

In emergency situations resulting from the construction operation, where life or property are endangered, the applicant shall immediately take whatever action is possible to eliminate the danger, and shall also notify the Regional District of the situation.

6) Access Maintained

Existing hydrants, valve or control pit covers, valve boxes, curb stop boxes, fire or police call boxes, and all other utility controls, warning systems, and appurtenances thereof shall not be constructed or made inaccessible at any time by the construction work. Bridges, walks, or other temporary facilities shall be provided as may be necessary to ensure that these controls or warning systems are free for use in their normal manner at all times during construction.

7) Curtailment of Utility Service

Where existing utilities such as water, sewer, electricity, telephone, and gas are serving the public, work shall be planned and executed such that there is no curtailment of service provided by these utilities without prior receipt of approval of the authorities responsible for provision and maintenance of these utilities. The applicant shall obtain the above approvals from the recognized authorities controlling these utilities. If approval for such disruption of utility service is not granted, it may be possible to establish temporary facilities to provide continuous utility service during the course of construction. Such temporary facilities shall only be implemented after receiving the approval of the utility authority.

If approval is received to temporarily shut off an existing utility, individual users of the utility shall be notified at least one hour prior to the time of shut-off.

If there is going to be a shut-off, the Fire Department shall be notified at least one hour prior to shut-off time.

8) Support of Structures

Existing structures shall be protected against damage from settlement by means of timber support or compaction of backfill as required. Where necessary, timber support shall remain in place following backfill of excavations.

Backfill which is placed under or adjacent to the existing structures, which have been undermined during excavation shall be compacted in a manner which will prevent damage of the structure from settlement. Such backfill shall be of approved granular material suitable for compaction.

On existing piping, this material shall extend horizontally a minimum distance of 600 mm on both sides of the pipe at a level 300 mm above the pipe, and shall slope down from this point at 1-1/2 horizontal to 1 vertical to meet the bottom of the excavation.

Drainage Facilities

Existing culverts, enclosed drains, flumes and ditches, and other drainage structures affected by the work but left in place shall be kept clear of excavated material at all times during construction. When it is necessary to temporarily remove an existing drainage structure, suitable temporary ditches or other approved means of handling the drainage shall be provided during construction.

3.3 Clearing

Prior to clearing, the exact limits of the areas on which clearing may take place and whether or not there are restrictions placed on clearing which would result in leaving certain trees, structures, or other existing items in place shall be ascertained.

Prior to trenching, the right-of-way shall be cleared of all standing or fallen brush, timber, stumps, or other debris, which may obstruct the construction operation, damage the completed installation, or detract from the appearance of the site on completion of construction. This material shall be burned or otherwise disposed of to the satisfaction of the Regional District.

The restrictions of all authorities established to control burning in the area shall be complied with. If burning cannot be done on the clearing site, the material shall be hauled to an approved location for burning or disposal. Burning permits, as required, shall be obtained by the applicant.

3.4 Trench Alignment and Depth

Following clearing and prior to excavation of the trench, the location at which the pipe shall be installed shall be established by setting stakes at 20.0 m intervals along a line offset from the centre of the proposed pipeline.

Where pipe is to be installed to a predetermined grade, a cut sheet will be provided showing the depth of the pipe invert relative to the grade stake elevation at the respective locations along the pipeline.

The trench shall be excavated so that pipe can be laid to the established alignment and depth, with allowance made for specified trench wall clearances and bedding as shown in Table 4 or otherwise required.

All trenching and excavations shall be carried out in the manner recommended by the Workers' Compensation Board of British Columbia, or as may be necessary to protect life, property, and structures adjacent to the work and the work itself.

3.5 Pipe Installation

In general, and without limiting the clauses set out in this Standard, pipe shall be installed in accordance with the following specifications:

Ductile Iron Main	AWWA C600
Asbestos Cement Main	AWWA C603
Steel Mains	AWWA C603
PVC Mains	AWWA C900

3.6 Trench Backfill

Trench backfill shall be carried out as shown in Table 4.

3.7 Repairs

Any system approved and built to these standards which requires maintenance work, shall be repaired with materials and construction methods conforming to the specifications contained herein.

4. TESTING AND DISINFECTION

4.1 Written Reports

The applicant shall submit reports to the Regional District certified by a professional engineer of the tests and chlorination requirements specified herein.

4.2 Leakage Tests

Following final trench backfilling, leakage tests shall be performed on all installed piping.

Leakage tests shall be carried out between valved sections of the installation such that every valve in the system is tested for leakage in the shut-off position.

Leakage tests shall be performed in the following manner. The section to be tested shall be filled with water and all air expelled from the piping. It is recommended that the test section be filled with water for at least 24 hours prior to testing. By pumping water into the test section, the pressure within the piping shall be increased to 0.7 MPa, or 1-1/2 times the system operating pressure at the point of test, whichever is the greater. This pressure shall be maintained constantly in the pipe throughout the duration of the test by the addition of make-up water. The duration of the test section to maintain the specified pressure over the period of test shall be considered to be the leakage.

Piping will not be accepted until the leakage is less than the maximum allowable leakage determined from the following formula:

$$L = ND \times \text{the square root of } P$$

in which L = the allowable leakage in litres per hour,
 N = the number of joints in the test section,
 D = the nominal diameter of the pipe in millimetre, and
 P = the average test pressure during the leakage test in
 megapascals.

Should any test disclose leakage greater than that specified above, the defect shall be located and repaired, and the section shall be retested to ensure that the leakage is within the allowable limits.

4.3 Flushing

The pipe shall be cleaned of dirt and other foreign materials. The pipe shall be flushed at water velocities of 1.0 m/s, or as high a velocity as can be obtained from the available water sources. Flushing water shall be discharged to watercourses or ditches that have sufficient capacity to carry the flow.

4.4 Chlorination

On completion of the flushing operation, main pipes and services shall be chlorinated. Chlorination procedures shall conform to AWWA C601.

On completion of chlorination, the entire piping system shall be thoroughly flushed, filled with water, and left in a condition ready for use.

Water reservoirs and storage tanks shall be disinfected in accordance with AWWA D102.

Chlorinated water shall be disposed of in such a way as to not cause harm or damage to vegetation or aquatic life in bodies of water or water courses.

4.5 Inspection

The Regional District shall be given 48 hours notice of all tests and chlorination.

1. GENERAL

1.1 Requirement

The water standards for design and construction of the water system within the Lakes District and the Schooner Cove Community Water Standards Area are to be governed by Regional District of Nanaimo Land Use and Subdivision Bylaw No. 500, 1987, and particular by this Schedule 4C1.

It is the intention of the RDN to enter into a phased development agreement under section 905.1 of the *Local Government Act* with the property owner of the lands within the Lakes District Comprehensive Development Zone CD44 and the Schooner Cove Comprehensive Development CD45 that will specify changes to specified subdivision servicing bylaw provisions that would not apply to the development contemplated under that agreement, unless agreed to in writing by the developer.

The RDN will require a Subdivision Service Agreement to be completed for any new water system or existing system extension, unless otherwise agreed to in writing by the RDN.

Water supply and distribution systems shall be designed, installed, extended, tested and maintained in accordance with the following standards and specifications.

1.2 Design

The engineering design of the water system shall be carried out by, and the preparation of drawings and specifications shall be sealed by a Professional Civil Engineer registered in the Province of British Columbia (the Design Professional), and shall conform to these Standards.

1.3 Definitions

Engineer means the Manager of Engineering Services for the Regional District of Nanaimo, or the person designated by the General Manager of Regional and Community Utilities.

Engineer of Record means a Professional Engineer registered with the Association of Professional Engineers and Geoscientists of BC who is responsible for the construction drawings and documents. The Engineer of Record will be the engineer that signs and seals the record drawings and Certification of Installed Works.

Facilities means water lines, water treatment plants, pumping stations and other works necessary thereto, and for carrying potable water and includes any and all works, structures, lands, conveniences, incidental to and necessary for a water system.

Member Municipality or Member means a municipality or improvement district within the Regional District of Nanaimo.

Regional District means in the document the Regional District shall refer to the Regional District of Nanaimo.

1.4 Application

All applications shall be made in two steps as follows:

1. Feasibility Review

All proposed construction of water supply and distribution facilities shall be submitted to the Regional District for a feasibility review prior to commencement of any detailed design or construction. Such requests shall include a plan of the proposed construction and the area it will

serve. The applicable feasibility review fee, in accordance with RDN Bylaw No. 1259.03 or most recent amendment, and the Letter of Assurance shall also be submitted at this time.

The Regional District will review the proposal, and reply in writing indicating approval or listing the necessary amendments required.

To be addressed but not limited to, are the following items:

- a) source of water
- b) initial plan of the works showing equipment/pipe sizes, materials etc.
- c) number of properties and population served
- d) alignments/offsets of pipes etc.
- e) any flow and/or pressure concerns

2. Detailed Design

The detailed design and specifications shall be submitted in duplicate to the Regional District for Design Stage Approval (DSA) prior to construction and is valid for up to 180 days from the date of issue. Attached to the submission shall be a Certificate of Design. The applicable engineering review fee, in accordance with RDN Bylaw No. 1259.03 or most recent amendment, shall also be submitted at this time, along with the Design Professional's certified cost estimate for the works upon which the fee amount is based.

The detailed plans will be returned either approved or with a request for re-submission. Re-submission will be carried out until the Regional District approves the detailed plans and specifications, and issues Design Stage Approval (DSA).

The Design Professional shall submit the RDN approved plans to the Provincial Ministry of Transportation & Infrastructure and Vancouver Island Health Authority for any approval permits that may be required. Receipt and submission of these permits to the RDN shall also be a prerequisite to the start of construction. Approval permits from other applicable agencies as required shall also be obtained.

1.5 Drawings and Specifications

All design drawings shall be ISO A1 size, 594 mm in depth and 841 mm in width. The following information shall be supplied:

- 1. Location Plan** - showing the location of the proposed work. This may appear on the same sheet as the Key Plan.
- 2. Key Plan** - showing a plan of the proposed work at a suitable scale such that the whole works are shown on one drawing, usually 1:5000, 1:2000 or 1:1000. The Key Plan shall show a general outline of the works, area covered and sheet numbers of the plan/profile drawings, and a legend showing existing and proposed works.
- 3. Plans/Profiles** - showing detailed design of the proposed works. Profiles of mains 200 mm in size and under are not required unless otherwise specified by the Regional District.

Plans shall be drawn at a scale of 1:500 (1:250 is also acceptable), showing the location of the pipe centreline, pipe size and type and off-set from property line, hydrants, valves, fittings and all related appurtenances in relation to road, easement and adjacent property and lot lines. Existing or proposed underground utilities are to be indicated on the plan in addition to the extent of work required in making connection to existing

water main. Location of service connections are to be shown. Connections not conforming to the standard offset require a distance from an iron pin or lot line. In general, water services shall be installed two in a trench at property corners, 1200 mm from the lot line, and alternate with hydro and telephone poles.

Profiles shall be drawn at a horizontal scale of 1:500 and a vertical scale of 1:50 if more suited to specific conditions. The profile shall show the line of the existing and finished road grade on centreline, the invert of the pipe, location of fittings and hydrants, and location of sanitary and storm utilities. Where the pipe is not to be laid at a constant depth below the finished grade, the invert elevation shall be shown at pipe deflections and vertical bends.

Drawings detailing plans and elevations shall be prepared for wells and wellheads, supply intake works, pump stations, major valve chambers, and storage reservoirs. Suitable standard scales shall be chosen, being either 1:50, 1:20, 1:10, or 1:5.

4. **Specifications** - shall be prepared to further define materials of construction and shall specify methods of construction and workmanship.
5. **Record Drawings** - shall be prepared by correcting drawings on completion of construction in order to reflect "as-built" conditions for permanent records. The location of all individual lot water service connections shall be clearly shown. The drawings shall be signed and sealed by the Professional Civil Engineer, and shall be accompanied by a Certification of Installed Works. Final record drawings shall consist of:
 - a) 2 full-size paper sets;
 - b) one full size 3 mil Mylar set;
 - c) 2 – 11" X 17" paper sets or 2 A3 half-size paper sets, as agreed by the RDN; and
 - d) digital copies, one as AutoCAD or Civil 3D file as applicable to the current software, and one as TIFF files.

1.6 Variations from Standards

Where the applicant wishes to vary from these standards he shall submit a written request with adequate supporting data to the Regional District for review.

The Regional District shall make the final decision in writing as to the standard requirements which shall apply.

1.7 Permits

The applicant shall be responsible for obtaining all necessary approvals and permits required prior to commencing construction of the water system.

1.8 New Service Areas

Where a water system is to be constructed by an applicant within an area previously unserved by a community water system, the design and construction for the system shall comply with the requirements of these Standards, unless otherwise agreed to in writing by the Regional District.

1.9 Existing Service Areas

Where a water system is to be constructed by an applicant within the existing or extended boundaries of an area already being served by a community water system, the design and construction of the system shall comply with the requirements of these Standards, with the

understanding that Sections 2.5 and 2.6 may not apply and will be determined by the RDN according to the project and available existing source capacity and water quality.

1.10 Inspection

The Manager of Engineering Services of the Regional District or his appointed deputies shall be allowed access and provided adequate facilities for access to any part of the works at all times for the purpose of inspection.

Any connections to or interruption of any existing system will be under the direct supervision of the Regional District. Adequate notice to the Regional District of any such interruption to service shall be provided in order that attendance by Regional District personnel can be arranged.

The design engineer appointed by the Developer/Owner shall be employed during construction of the works to confirm the project is/has been constructed according to the design drawings and specifications. At the end of the project the engineer shall provide a Certification of Installed Works indicating the works were constructed according to the plans and specifications and meet all applicable codes / regulations / bylaws.

2. DESIGN

2.1 Water Demand

Water sources and primary supply mains shall be designed to supply the maximum day's demand, while distribution mains and booster pump stations must be sized to handle the peak hourly or fire flows. The volume of water in storage acts as a cushion between these differing flows.

The water distribution system shall be designed according to the following minimum demands:

1. Residential

Replacement Section 2.1.1 Water Demand - Residential

Housing Unit	Max Litres per Day per Person	Max Imperial Gallons per Day per Person	Persons Per Household	IGPM per Housing Unit
		(A)	(B)	(A/24/60XB)
Single-Family/detached house	1,168	250	2.2	0.38
Townhouse (attached, semi-detached) unit	914	200	1.9	0.26
Apartment / condominium unit	424	90	1.4	0.09
Secondary suite (carriage house)	424	90	1.1	0.07
Seniors Living unit	424	90	1.1	0.07

2. Commercial and Industrial

Water demands for developments involving commercial or industrial zoned lands shall be in accordance with good engineering practice as determined by the Design Professional and approved in writing by the Regional District.

Replacement Section 2.1.2 Water Demand - Commercial

Non-residential uses			
Commercial – Retail	480	105	Per 1000 sf leasable
Commercial – Office	640	140	Per 1000 sf leasable
Commercial – Restaurant	3500	770	Per 1000 sf leasable
Commercial – Pub	3500	770	Per 1000 sf leasable
Fitness Centre	490	105	Per 1000 sf leasable

3. Fire

Required fire flows shall be in accordance with the "Water Supply for Public Fire Protection - A Guide to Recommended Practice" as published by Public Fire Protection Survey Services, but in no case shall be less than 4.55 m³/min (1000 igpm) for 90 minutes unless approved in writing by the Regional District.

2.2 Water Pressure

Minimum design distribution pressure in all areas at peak demand shall be 276 kPa (40 psi) at the property line. The design engineer shall indicate any building sites where the pressure at the main floor of the building is expected to be less than 207 kPa (30 psi). The developer is expected to file covenants of low pressure on properties where the pressure at the main floor of the building is expected to be less than 207 kPa. With the combination of maximum daily demand and the specified fire flow, the minimum residual water pressure at the fire hydrant shall be 138 kPa (20 psi), and at the highest point in the system shall not fall below 69 kPa (10 psi). Where these minimum design pressures cannot be maintained due to an increase in elevation or distance from the point of connection, a booster pump station and emergency storage shall be provided as part of the distribution system.

The maximum allowable distribution line pressure is 900 kPa (130.5 psi) except where individual connections are permitted directly from trunk mains and where special precautions are taken. Otherwise, where distribution pressures will exceed 900 kPa due to a drop in elevation, a pressure reducing station shall be installed as part of the distribution system. Where distribution pressures exceed 550 kPa (80 psi), occupants in the area shall be required to install individual pressure reducing valves. This valve shall be of an approved design and manufacture.

2.3 Design Population

Design populations used in calculating water demand for residential properties shall be computed in accordance with the population predictions based on the total number of residential units and persons per unit (ppu) as determined by the Regional District from census data or with the persons/hectare (in 2011 an average single family detached home has 2.2 ppu*) :

Multiple dwelling unit development	125 persons/hectare
Dwelling unit	30 persons/hectare (12.5 homes/hectare)

Exceptions to these design population densities may be varied by the Regional District of Nanaimo with Board Approval.

2.4 **Hydraulic Network**

Depending on the complexity and extent of the proposed distribution system, the Regional District may require a hydraulic network analysis showing maximum design flows and minimum design pressures. If this information is required, it will be stated by the RDN in writing at the time of the **Feasibility Review** and shall be submitted by the applicant with the detailed design application. The hydraulic network shall be designed to provide the maximum design flows at or above the minimum required pressures specified in this Standard.

2.5 **Water Quality**

1. Water supplied to domestic consumers shall be of a quality meeting the guidelines for microbiological, chemical, and physical parameters listed in the “latest edition” of the Guidelines for Canadian Drinking Water Quality prepared by the Federal-Provincial-Territorial Subcommittee on Drinking Water. All new water source quality shall have parameters equal to or less than the aesthetic objectives (AO) listed in these guidelines. If necessary, treatment of the source water to reduce iron and manganese below AO shall be provided. Exceptions to these parameters may be approved in writing by the Regional District of Nanaimo with Board Approval.
2. All surface water supplies shall be suitably treated and disinfected as per provincial requirements/regulations. Disinfection will normally be solely by chlorination using proportional solution feed, but other approved methods will be considered, including ultraviolet (UV) units, provided residual chlorination is included.
3. Groundwater sources may require chlorination, either at the discretion of the Vancouver Island Health Authority (VIHA), or by the RDN to suit operational requirements such as integrating a new source into an existing chlorinated system. Space shall, as a minimum, be provided for all chlorine storage and associated equipment.

2.6 **Supply Sources**

1. **Groundwater Source**

Where groundwater is to be the source of supply, a copy of the well driller's log shall be submitted, together with a copy of a well completion report by a Design Professional or a professional geoscientist registered in the Province of British Columbia (The Design Professional). All new wells shall be constructed in accordance with the Groundwater Protection Regulations, November 1, 2005, or their most recent amendment or replacement legislation.

Wells shall be cased with a minimum 200 mm (8 inch) diameter steel casing having a minimum stickup of 300 mm (12 inches) above the proposed final ground surface. The well shall be completed with stainless steel screen(s) selected following sieve analysis of aquifer material, and shall have a surface casing of a minimum 250 mm (10 inch) diameter surrounding the 200 mm well casing (unless otherwise approved in writing by the RDN). The length of the surface casing shall be designed by The Design Professional and shall not be less than 3 meters (10 feet). A surface seal of at least 4.5 meters (15 feet) shall be installed as per the standard contained in the BC Ground Water Protection Regulation. The ground surface around the well head shall be graded to slope away from the well head at 2% grade or greater.

Any wells which encounter bedrock and source water from within rock, shall have well casing driven into the rock to establish a seal and have a surface annular seal placed to the depth at which bedrock is encountered or to a minimum depth of 4.5 meters (15

feet), whichever is less. All wells completed in bedrock must be equipped with PVC liner with threaded joints to allow for removal of the PVC for periodic well maintenance.

Modifications to well casing to allow for shallow subsurface connection, i.e., pitless adapter units, will require that the surface annular seal be re-established. All new wells shall be equipped with a 25 mm (1 inch) diameter PVC monitoring tube for the installation of a standard water level measuring device without danger of being stuck in the well.

The new well shall have a Well Identification Plate as issued by the BC Ministry of Environment attached to the well casing exposed at surface and clearly visible. Copies of all information for the well including the drillers log, pumping test data, analysis and written reports shall be submitted to the BC Ministry of Environment, VIHA and RDN.

The well completion report shall record results of well pumping tests which shall only occur during the late summer or early fall (August, September, October as this time is generally the lowest ground water levels of the year), and contain conclusions as to the capability of the source with the standard MOE 30%percent drawdown safety factor under conditions of zero surface recharge for 120 days (this figure may be reduced 100 days if authorized in writing by the RDN). All interference effects from adjacent constructed wells, on the assumption that they are all fully operational on a continuous basis over the same 120 day period, shall be allowed for in addition to the 30% drawdown safety factor.

No safety factor is required to be added to the interference drawdown allowance although a 15% reduction will be applied as per RDN Board resolution (December 2009) regarding well capacity redundancy and this will be reviewed by the RDN. The Design Professional shall recommend a rated pumping capacity for the well and all wells which will be reviewed by the RDN. The hydrogeologist may require specific pump rates for proper testing.

The Design Professional shall also assess if and what interference effects the new well will have on any adjacent operating RDN system wells. He shall provide an assessment of the effect in total litres per second of capacity reduction which those operating wells are anticipated to have over the 120 day zero surface recharge condition with the new well operating. The new well pump will be required to be sized to the full long term design capacity, but the allowable new supply applicable to support new development will be lowered by any such capacity reduction which it may have on operating RDN wells.

The well pumping test shall be run for 48 hours continuous pumping (72 hours in bedrock wells) at a pumping rate at or above the projected long-term pumping capacity of the well or until the water level stabilizes, whichever is the longest time. Adjacent constructed wells shall be monitored during the test pumping period, to allow The Design Professional to assess interference effects. Well recovery measurements shall also be carried out immediately on completion of the test pumping period and shall continue until the well has recovered to at least 95% of its initial level (the RDN may reduce this recovery to 80% but this must be authorized in writing by the RDN). A minimum long-term well design capacity rating of 3.8 l/s (50 igpm) is required for any individual well. The minimum standards for pumping test and well capacity can only be altered in writing by the RDN, where under special circumstances wells meeting all quality guidelines and a capacity rating between 2.3 l/s and 3.8 l/s may be considered by the RDN for acceptance. Well testing procedures shall be in accordance with information provided by the BC Government. In no case shall the pumping test be of

less time than it takes to produce a relatively stable water level in the well for an adequate period of time, as approved by The Design Professional.

The well completion report shall include a water balance for the aquifer, which accounts for seasonal recharge and withdrawals by users both directly up-gradient and down-gradient of the existing and proposed subdivision lots. All assumptions incorporated into the water balance calculations shall be stated in the report. The well completion report shall also include an assessment of any risk of flooding around the well and indicate what measures have been taken or will be taken to protect the well or wellhead from entry of flood debris or flood waters or physical damage due to flood debris, ice or erosion. Flood proofing shall be in accordance with the Drinking Water Protection regulation, Section 14 and the Ground Water Protection Regulation, Section 11.

The Regional District may require a more extensive quantitative and qualitative report by the Design Professional where unusual conditions or results occur. Further, the RDN may require the information provided by The Design Professional to be reviewed/scrutinized by a third party Design Professional appointed/retained by the RDN and paid for by the developer/well provider.

All new sources of water shall be approved by the Vancouver Island Health Authority (VIHA) and a "source approval" must be issued by VIHA prior to the source being connected to the Regional District of Nanaimo's public water system. VIHA must also approve the well for service in writing. The connection of new properties requiring a new approved source of water shall not be permitted/approved by the RDN until the source is approved by VIHA. A wellhead protection (WHPR) report suitable to the RDN and in the format shown as "Minimum Requirements" shall also be submitted along with the information provided for source approval. Any requirements imposed by VIHA in the source approval shall be completed by the Developer, unless agreed to otherwise in writing by the RDN.

The RDN shall have legal control over a sanitary control area extending from the well head to a radius of 30 to 60 metres based on a wellhead protection report and to the satisfaction of both VIHA and RDN. RDN shall own the property as fee simple around the well head. The sanitary setback areas preferred form of legal control is fee simple ownership, particularly for the first 30 metres, however, if and to the extent that such is not feasible, this may also take the form of a sanitary control easement satisfactory to both VIHA and the RDN.

New sources shall also include provision of a suitable monitoring well that shall be designed and placed near the production well as recommended and designed by the Design Professional. The monitoring well shall be suitably completed and secured at the surface with a Model Solonist Gold (or other model if approved in writing by the RDN) electronic data logger placed at a suitable depth in the monitoring well.

2. Surface Water Source

The proposed use of surface water as a potable water supply source shall be approved by the Board before being considered. Any surface water source shall meet all provincial government regulations and guidelines for siting, for licensing and for treatment etc.

3. Source Pump Stations and Controls

Due to the individual requirements for source pump stations, a standard detail drawing is not provided in these Community Water System Standards. Prior to completing the preliminary design, the design engineer shall request samples of typical recent acceptable source pump stations, and confirm conceptual design requirements. This will be further reviewed, and requirements confirmed by the RDN at the feasibility design review stage.

Wellhead piping shall consist (as a minimum) of a wye strainer, turbine flow meter, air release valves, check valve, gate valve to throttle flows to recommended output with pressure gauges upstream and downstream and mating flanges with adapter coupling to allow installation of an orifice plate to fine-tune pump output, and a 50 mm (2 inch) diameter valved outlet with 62 mm (2.5 inch) diameter fire hose adapter for flushing purposes. A hose bib shall be provided to permit periodic water sampling. The wellhead building or enclosure shall be designed such that future access to the well is available for pump removal or well redevelopment. This shall normally be achieved by installing a pitless adapter on top of the well, protected from vandalism by installation in a non-confined space concrete chamber with spring-assisted aluminum cover and locking lid. A Model Solonist Gold (or other model if approved in writing by the RDN) electronic data logger shall be installed in the well, with data recording equipment and software. Access to install a well-line into the well for periodic manual monitoring of static and pumping levels in the well shall also be provided. Flow recording instrumentation is required. Surface source piping shall be similar in general concept to wellhead piping, modified as agreed with the RDN and to suit the special site circumstances.

The source pump station building shall be designed to provide adequate heating and insulation, lighting and ventilation. The size of the building shall be discussed and determined at the time of the feasibility review. The building shall be of concrete and block work construction, with two isolated rooms, each having separate access doors. One room shall house mechanical piping and electrical controls, and the second room chlorine injection equipment and liquid chemical storage with built-in spill containment. In special circumstances only, the RDN may approve the use of enclosures in lieu of a building, due to site space or access agreement limitations.

Each pump shall have a variable frequency drive combination motor starter with a motor circuit protector, a "hand-off-auto" selector switch, a green "pump run" pilot light, a red "pump failed" pilot light and an elapsed time meter.

Motor starters for submersible well pumps shall be equipped with quick-trip overload relays. Low level draw-down protection shall be provided utilizing electrodes suspended in the well. Restart of the pump shall be automatic when the water level in the well has recovered sufficiently; however, a red alarm light on the control panel shall require manual reset.

If the system consists of more than one pump, supplied from the same service, the control circuits shall be subdivided into branch circuits in such a manner as not to shut down the entire system if one pump circuit develops a fault. Also, time delays shall be provided to permit staggered re-start of the pumps after a power failure.

The pump control panel shall have protection against single-phasing and a red pilot light which will stay on until manually reset after a power failure.

If the system consists of more than one pump, an automatic alternator or manual lead pump selector switch shall be provided.

A single-pole, double-throw (SPDT) contact shall be provided for remote alarm purposes, which will be activated in the event of pump failure, motor overload, and power failure of low well level. Connection of alarm signal outputs to the RDN answering service or alarm centre shall be provided. An external alarm light may also be required for some installations.

Signal cables for pump control shall be directly buried, either alongside connecting pipelines or in a separate trench, wherever feasible. Cable warning tape shall be installed in the trench over signal cables.

For well sources on new systems where very little water-use occurs during the initial operation period until sufficient new users are connected, the RDN may require installation of an approved automatic flushing device, to help in maintaining water quality.

Supervisory control and data acquisition (SCADA) shall be provided from all data outputs to a central location within the new system, normally at the source pump station. The RDN will be responsible for connection of local data to a centralized system, and for any offsite programming requirements which may be required to integrate the new system into the overall water systems SCADA system.

The RDN may require emergency power back-up on all new water sources. This will be determined at time of feasibility review by analyzing system vulnerability.

2.7 Storage

1. Sizing

a) Reservoirs shall be sized to provide usable water storage volume to meet the fire flow requirements (Section 2.2.1.3) plus 20 percent of a maximum day's demand for the tributary area, and shall be of at least 365 cu. m (80,000 imperial gallons) capacity. The RDN may agree in writing to reduce the reservoir minimum size requirement.

2. Design

The materials and designs used for finished water storage structures shall provide stability and durability as well as protect the quality of the stored water. Unless one or more reservoirs in the same or higher pressure zone within the system are already operational, the reservoir is to be constructed with two independent cells. This is to allow maintenance of one cell to occur, while the second cell remains in service. During the feasibility review, the reservoir design, security features, dimensions, layout and material of construction shall be discussed and agreed with the RDN. Where practical, concrete reservoirs are preferred (although other materials of construction will be considered for acceptance) provided they are designed in accordance with the Building Regulations of British Columbia and amendments thereto. When topography and pressure zone conditions allow, an in-ground reservoir with a minimum 500 mm gravel and soil covering is preferred, for improved seasonal water quality. Steel structures shall also follow the current AWWA Standards concerning steel tanks, standpipes, reservoirs, and elevated tanks wherever they are applicable.

The foundation may be designed either with the bottom at ground level, bearing on a slab or ring beam or on legs with the bottom in an elevated position.

Foundation design shall be in accordance with Building Regulations of British Columbia and amendments thereto. A foundation or soils investigations report shall be submitted, prepared by a Geotechnical Engineer registered in the Province of British Columbia.

In addition to the seismic requirements of the Building Regulations of British Columbia due account shall be taken of the effects of both convective and impulsive forces generated by ground motion. Sufficient clearance shall also be provided between high water level and roof soffit to allow for wave generation.

The reservoir structure shall be designed to safely withstand all construction and operating loads.

Reservoirs shall be totally enclosed with adequate ventilation, screened and weather protected. Vents shall project above the highest anticipated depth of snow on the roof.

Concrete reservoirs shall be provided with a roof access hatch served by internal and external ladders. Steel reservoirs shall be provided with a roof access hatch served by internal and external ladders and low level access manhole. Roof access hatches shall be of aluminum with spring-assisted opening, and shall be lockable. A roof mounted plate shall be installed alongside the roof access hatch, to suit mounting of the RDN mobile safety winch mechanism, used during internal access operations.

Access ladders, safety cages, and platforms shall comply with the requirements of the Worker's Compensation Board. Chain link and barbed wire fencing of the reservoir site will be required by the RDN, unless otherwise approved in writing by the RDN for specific site location and security conditions.

An altitude gauge shall be provided at an elevation of 1.2 m above the reservoir foundation.

Inlet piping is to discharge into the reservoir above TWL elevation. An approved outlet set 100 mm above the reservoir floor, a valved drain set at floor level, and an overflow pipe with bell-mouth entry set at 200 mm above normal reservoir top water level with 300 mm clearance from underside of roof shall be provided.

Alarms requiring manual reset shall be provided to indicate reservoir high or low level. In a water system consisting of well or booster pumps, these alarms shall be transmitted along buried signal cables to a central location. Controls may utilize probes or transmitters. Where the reservoir is supplied via pumped water, pump start-stop controls will be required. The RDN may require individual start-stop levels for each pump, or staggered pump start-stop on a timer basis.

The Regional District will require the installation of flow meters with flow data transmission and recording from the reservoir outlet. Level monitoring and recording from a level transducer at the reservoir base, or in a chamber immediately on the outlet pipe, shall also be provided.

2.8 Water Distribution Piping

1. Materials

Unless otherwise permitted, the following pipe materials shall be used for water distribution:

Material	Specifications
Steel Pipe	AWWA C200
Ductile Iron Pipe	AWWA C151
PVC Pipe	AWWA C900 - Class 150, DR 18 maximum

All pipe shall be delivered to site with end caps for shipping and storage. Steel pipe shall be coated and lined in accordance with AWWA C203. Ductile iron pipe shall be cement mortar lined in accordance with AWWA C104. Joints shall be rubber gasket in accordance with AWWA C111. Where corrosive soil conditions exist and metal pipe materials are proposed for use, a soil corrosion survey shall be undertaken by an approved professional. The Regional District may require special protection for the pipe. All pipes shall be designed for the maximum pressures and earth loading to which the pipe will be exposed, but in no case shall the design working plus safety factor pressure or class be less than that providing an AWWA standard rating of 1030 kPa (150 psi). Lesser pressure class pipe may only be used when specifically approved otherwise by the RDN for large installations, where no possibility of pressure surges or pressure zone changes occurring, in which cases Class 100 or better rating pipe would be considered.

2. General Layout

Numerous trunk lines and secondary feeders shall be installed throughout the system. These mains must be large enough to deliver consumption and fire flow demands for the district served, and shall be spaced not more than 900 m apart and looped.

Minor distributors and pipes of the gridiron system shall be a minimum of 150 mm in diameter in residential districts with 150 mm diameter cross mains at intervals not exceeding 180 m. Where no longer lengths of pipe are necessary, 200 mm diameter or larger intersecting main shall be used unless initial pressures are unusually high. 200 mm diameter pipe shall be used where dead ends or poor gridironing are likely to exist for a considerable period, or where the layout of the streets and the topography are not adapted to the above arrangement. Lines furnishing domestic supply only, and not serving hydrants, may be 100 mm diameter. Mains in cul-de-sacs shall be looped wherever feasible by connecting through specifically created rights-of-way or parkland, or by twinning pipe installation and looping pipe ends, for improved water quality. Where a water main ends in a dead end, or a valve is normally closed, a fire hydrant or below ground flushout shall be provided for flushing purposes. Temporary above ground flushouts may only be used on those mains intended to be extended in the near future.

In the high value districts, the minimum size shall be 200 mm diameter. Pipe of minimum 250 mm or 300 mm diameter is to be used on major and network highways and roads as identified in the Official Community Plans of the Regional District and for long lines not cross-connected.

2.9 Service Connections

Unless otherwise permitted, only the following materials may be used for service connections:

Material	Specifications
Polyethylene, PE 3406 - N	Potable Series 160 B.137.1
Plastic	ASTM D2666
Soft Copper, Type K	ASTM B88

In general, polyethylene shall be used for new services, except in special approved circumstances, and copper for replacement of existing old service piping by trenchless “pipe splitting” methods.

The minimum size of service connection is 19 mm diameter. Where the length of service between the main and anticipated building frontage exceeds 30 m, the service connection shall be minimum 25 mm diameter. Corporation and curb stops shall be of the same diameter as the service piping. In the larger sizes of service connection piping, the materials specified in Section 2.8 for water distribution may also be used.

Drawing W-7 of this Schedule shows the general arrangement for water service connections. The minimum size of service connection is 20 mm diameter.

Water service connection locations shall be co-ordinated with B.C. Hydro, TELUS (Telephone Company), and Shaw Cablesystems to avoid any conflict with poles (or proposed underground facilities and service conduits for underground utility installations) at the property lines of parcels. Similarly, conflict with Terasen (gas) services shall also be reviewed and avoided.

1. Corporation Stops

Corporation stops shall be in accordance the following supplementary data:

- a) Full port ball valve.
- b) Minimum 150 psi rating.
- c) AWWA x compression.
- d) Compression nut machined to bottom out on valve body shoulder.
- e) Saddle clamps shall be used as specified by the manufacturer.

2. Curb Stops

Curb stops shall be in accordance with the following supplementary data:

- a) Full port ball valve.
- b) Minimum 150 psi rating.
- c) Compression x meter swivel nut.
- d) Compression nut machined to bottom out on valve body shoulder.
- e) Integral locking.
- f) Drain holes not permitted.
- g) Set on main side of meter box to facilitate meter installation when required.
- h) Curb stops shall initially be set in a 100 mm diameter PVC riser pipe, with the meter box to be installed by the RDN on final connection when the building is under construction, unless agreed otherwise. Concrete meter boxes with full support lip

and steel lid drilled for touch-read meter pad shall be provided to the RDN for this purpose.

2.10 Fire Hydrants

Hydrants shall be in accordance with AWWA C502, compression type, factory-painted yellow. The minimum hydrant size shall be 150 mm diameter. The minimum depth of bury shall be 1.2 m. There shall be a minimum of two 65 mm house outlets and one pumper outlet 117.5 mm P4.23, outside diameter male outlet complete with caps per hydrant. One of the outlets shall have an independent shut-off. Opening for both the main hydrant valve and independent shut-off shall be to the left (counter-clockwise). Outlet threads shall conform to the British Columbia Fire Hose Thread Specification. Main valve spindle and outlet nuts shall be standard pentagon shape. Main valve spindle: pentagon in 45 mm circle. Independent spindle: square 16 mm x 16 mm. Drain outlets are to be provided.

Drawings W-12 and W-13 of this Schedule show the general arrangement for the installation of hydrants. Connections shall not be less than 150 mm diameter. A gate valve will be provided on all connections between the hydrant and the main. Installations shall be in general accordance with AWWA M17. The hydrant shall be installed vertical, with the pumper nozzle perpendicular to the priority access road centreline. Mechanical joint thrust restrainers shall be used on all leads up to 6 m length. For longer hydrant leads, approved joint restrainers shall be used at each pipe joint, or alternatively a thrust block shall be installed behind the hydrant 'boot' in accordance with Drawing W-9.

Hydrant distribution shall be in general conformance with the aforementioned Standard of Municipal Fire Protection, but in all cases spacing shall be such that the maximum distance from a hydrant to the centre of any property measured along the centreline of the street and at right-angles to the property is 75 m. Hydrants will be set in 6 m from the corner at any intersection to facilitate future widening or other street works.

2.11 Valves

Unless otherwise permitted, only the following valves shall be installed in the distribution system:

1. Gate Valves

Gate valves shall be in accordance with Drawing W-8, AWWA C500 and the following supplementary data:

- a) Gate valves shall have an iron body, brass mounted.
- b) Valves shall be the same size as the pipe in which they are installed, up to and including 300 mm diameter. In mains over 300 mm diameter, valves may be butterfly type.
- c) Valve ends shall be provided to fit the pipe.
- d) The position of the in line valve shall be vertical.
- e) Stem seals shall be O-ring.
- f) Valves shall open to the left (counter-clockwise).
- g) Gears will be required on valves 400 mm and larger. Gear cases shall be totally enclosed.
- h) Bypasses will be provided on valves 500 mm in diameter and larger.
- i) Valves shall have a 50 mm square operating nut.

2. Rubber Seated Butterfly Valves

Rubber seated butterfly valves shall be in accordance with AWWA C504 and the following specifications:

- a) Valves shall be the same size as the pipe in which they are installed. Valves shall be of wafer style or short body flanged.
- b) Valve ends shall suit the pipe.
- c) Maximum nonshock shutoff pressure shall be suitable for 1030 kPa, bubble tight.
- d) Valves shall be designed for the extreme maximum flows for both opening and closing.
- e) Shaft seals shall be O-ring type.
- f) Valve disks shall be ductile iron.
- g) Valve operators shall be suitable for buried installation and equipped with a standard operating unit.
- h) Valves shall open to the left (counter-clockwise).
- i) Operators are to be located on the side of the valve with the operating spindle in the vertical position.

In general, valves shall be located at intersections and shall be so positioned that no more than 150 m for high value district and 250 m for other areas are isolated in the case of line repairs. In larger trunk and feeder mains where no interconnections are made, the spacing of valves should not exceed 500 m.

Approved joint restraint fittings shall be provided on all valves.

Where valves are located in the roadway, valve boxes shall be Nelson Type of cast iron and telescoping so the surface loads are not transmitted to the valve body of pipeline. A minimum of 200 mm of future adjustment shall be available on all valve boxes for future raising of grade, by locating the top of PVC riser a maximum of 100 mm below the completed asphalt apron grade at the time of initial installation. Cast iron hoods shall be provided on all gate valves 250 mm diameter or larger. In areas where there is no traffic, valve boxes may be as approved by the Regional District.

Valve markers shall be installed to indicate the location of all valves. These markers shall be constructed of 50 mm metal pipe painted sky blue and set in a concrete base. They shall extend 1 m above the ground surface. The markers shall be located 2 m from the property line opposite the valve and the distance to the valve is to be marked in black figures on a flattened upper portion of the marker.

2.12 Fittings

Fittings shall be designed for a minimum of 1030 kPa working pressure and shall be in accordance with AWWA C110. Ends shall be flanged or belled to suit pipe ends. Flanges shall conform in dimension and drilling to ASA B16.1, Class 125. Flange gaskets shall be of natural rubber and shall be 3mm thick with a layer of cotton on both sides. Approved joint restraints shall be used at all fittings, including restraining of a suitable length of pipe each side of the fitting, except at fire hydrant leads over 6 m with unrestrained pipe joints and at main dead-ends, where thrust blocks shall be provided as shown on Drawing W-9 of this Schedule. Thrust calculations for joint restraints shall be carried out in accordance with the manufacturer's specifications, and shown on the design drawings. Length of pipe to be restrained at each fitting shall be clearly shown on each applicable plan drawing, for the varying pipe sizes and fitting configuration.

2.13 Trenching and Backfill

The standard trench section is shown in Drawings W-1, W-2, and W-3 of this Schedule for various conditions. The nominal minimum depth of cover shall be 1.2 m but in no case shall it be less than 1.0 m unless otherwise permitted by the Regional District. Water mains shall be located not less than 3 m centre-to-centre from all sanitary and storm sewer lines, unless otherwise permitted by the Regional District and the Vancouver Island Health Authority.

1. Bedding material shall conform to the following gradation limits:

Gradation Limits
(Percent by Weight Passing)

Sieve <u>Designation</u>	<u>Type 1</u>	<u>Type 2</u>
19.0 mm	100	90-100
12.5 mm		65-85
9.5 mm	85-100	50-75
4.750 mm	70-100	25-50
2.36 mm		10-35
1.18 mm	20-65	
0.850 mm		5-20
0.6 mm	0-45	
0.425 mm		0-15
0.18 mm		0-8
0.15 mm	0-10	
0.075 mm	0-5	0-5

2. Type 1 is the standard acceptable bedding material. Type 2 shall be used where specified by the design engineer to meet special design loading. Dry sieve analysis shall be carried out in checking material gradation.
3. Other acceptable bedding materials, for use only where shown on the construction drawings or as approved by the Engineer, are drain rock, pea gravel or native material. In rock, pipe zone shall have filter fabric between rock and bedding material. Filter fabric shall be non-woven, minimum grade Armtex 200 or equivalent.
4. The bedding material shall cover the full width of the trench bottom and have a minimum depth of 100 mm on completion of compaction. In rock excavation the minimum depth of bedding below the pipe shall be 150 mm after completion of compaction.

5. Bedding material shall be compacted in maximum 150 mm lifts to 95% of Modified Proctor Density (ASTM D1557). Side tamping shall be carried out with bedding material placed to the pipe springline, to provide haunch support.
6. Bedding material shall be placed in such a manner that the pipe is evenly supported throughout its length by the pipe bedding material.
7. Placement and compaction of the bedding material shall not damage or displace the pipe.
8. Bedding material shall be leveled across the full width of the trench to an elevation of 300 mm above the crown of the pipe.

2.14 Pressure Reducing Stations

General requirements for pressure reducing stations shall be as follows:

1. A valved bypass shall be provided.
2. A surge relief valve shall be provided to release pressure in the event of a failure of the pressure reducing valve(s). The surge relief valve may be incorporated into the pressure reducing station or may be located at some other suitable location within the distribution system.
3. Pressure reducing valves shall be sized to provide adequate pressure control through all ranges of design flows. If necessary, two or more pressure reducing valves of varying sizes will be provided in the one station.
4. Each pressure reducing and surge relief valve will be provided with isolating valves and be installed so that individual components may be easily removed for repair or replacement.
5. The whole of the pressure reducing stations shall be enclosed in a reinforced concrete vault with a standard manhole cover and other opening large enough to remove the largest single piece of equipment in the station. Floor drains sloped at 2 percent shall be provided to keep the station dry at all times and shall not be directly connected to any sanitary sewer, or to a storm sewer without a backwater valve in the storm service connection. Drains to the surface are permissible if there is no risk of flooding. Otherwise, underground absorption pits or sump pumps will be required depending on site condition. A permanent access ladder shall be installed.
6. Pressure gauges complete with snubbers shall be installed to register both upstream and downstream pressure.
7. Adequate strainers with dual cartridge filters shall be supplied on the water used for controlling and regulating valves.

2.15 Booster Pump Stations

General requirements for booster pump stations shall be as follows:

1. A valved bypass shall be provided.
2. There shall be sufficient capacity so that, with the most important pump out of service, the station will be capable of supplying the maximum design flow.
3. It may be requested that provision be made to provide the maximum design flow during a power failure. Normally this will be accomplished by means of an elevated storage tank. Where this is not possible, emergency standby internal combustion engines shall be installed either for direct drive or electric generation.
4. Where design flows are such that starting and stopping surges will cause water hammer in the inlet or discharge lines, pump control valves or other pressure control devices shall be provided. Relief valves will also be required to protect against surges caused by power failure.
5. Pumps shall be controlled by automatic devices satisfactory to the Regional District. Flow and pressure measurement shall be provided where required. Flow recording may be required for some installations. Signal cable for pump control shall be directly buried, either alongside connecting pipelines or in a separate trench, wherever feasible. Cable warning tape shall be installed in the trench over signal cables.
6. Pumps shall normally be housed in above ground buildings, designed to provide adequate insulation, heating, lighting and ventilation.
7. Each pump shall have a combination motor starter with a motor circuit protector, a "hand-off-auto" selector switch, a green "pump run" pilot light, a red "pump failed" pilot light and an elapsed time meter.

If the system consists of more than one pump, supplied from the same service, the control circuits shall be subdivided into branch circuits in such a manner as not to shut down the entire system if one pump circuit develops a fault. Time delays shall be provided to permit staggered re-start of the pumps after a power failure.

The pump control panel shall have protection against single-phasing and a red pilot light which will stay on until manually reset after a power failure.

If the system consists of more than one pump, an automatic alternator or a manual lead pump selector switch shall be provided. Time delays or other means suitable to prevent hunting on momentary pressure surges shall be provided.

The pumps shall be shut down and stay locked in the event of motor high temperature or motor overload. The pumps shall also shut down on low suction pressure, however, re-start shall be automatic when the section pressure recovers, except that a red pilot light shall stay on until manually reset.

A single-pole, double-throw (SPDT) contact shall be provided for remote alarm purposes, which will be activated in the event of pump failure, motor high temperature, motor overload, low suction pressure, power failure or standby engine failure (if applicable). Connection of alarm signal outputs to the RDN answering service or alarm

centre shall be provided. An external alarm light may also be required for some installations.

2.16 Water Meter Chambers

General requirements for meter chambers on services of 37 mm diameter and larger shall be as follows:

1. An approved meter and double check backflow preventer shall be provided. The meter shall be touch-read style, conforming to the standard meter manufacturer and reading system used by the RDN.
2. Meters shall be sized to meet the anticipated maximum demand required, while providing accurate metering throughout the flow range. Compound meters, or large and small meters installed in parallel, may be required to meet these requirements, particularly where fire flows are to be metered. Pressure loss and maximum velocities shall also be examined. For systems supporting in-building wet fire sprinkler systems, available pressures during flow conditions shall be examined, to ensure adequate operating pressure is maintained at the sprinkler heads.
3. The meter shall be installed in a chamber or chambers, which are of non-confined space access design. Large lids shall be spring-assisted opening, suitable to carry traffic loading unless the location is totally isolated from existing or future traffic, of aluminum construction when feasible.
4. If a sidewalk location is unavoidable for the meter chamber, the box shall be situated to maximize the unobstructed walking corridor.
5. The meter shall be installed in a horizontal plane.
6. A valved by-pass shall be provided for meters 50 mm diameter and larger, to avoid service shutdown during meter maintenance. For combination domestic and fire flow meters, the by-pass shall be sized for the largest flow rate. By-pass and isolation valves may be installed external to the meter chamber.
7. Meter box lid shall be suitable for mounting a touch pit read pad.

3. CONSTRUCTION

3.1 General

1. Access Roads

Temporary roads shall be constructed as required for access to the working areas. Adequate drainage facilities in the form of ditches, culverts, or other conduits shall be installed as found necessary to maintain these roads. In the construction of access roads, existing drainage facilities, natural or otherwise, shall not be disturbed to the detriment of properties outside the working area and such facilities shall, unless otherwise provided elsewhere in the specifications, be restored to their original condition on completion of the work.

2. Sanitary Facilities

Clean, sanitary latrine accommodations shall be provided and shall be located and maintained in accordance with the regulations of VIHA.

3. Special Tools, Operating Manuals, Shop Drawings

With each piece of mechanical and electrical equipment or machinery having wearing parts and requiring periodical repair and adjustment, all special tools, wrenches, and accessories required for removing worn part, making adjustments, and carrying out maintenance shall be supplied. All gauges, indicators, and lubricating devices necessary for the proper operation of the equipment shall be furnished.

With each piece of equipment, four sets of operating manuals and as-constructed shop drawings shall be supplied. The manuals shall provide the manufacturer's recommended maintenance schedules with the grades of lubricants required, and instructions as to how the equipment may be taken apart for periodical inspection and replacement.

4. Blasting

Blasting will be permitted only after securing the approval of the applicable authorities. Blasting will not be carried out without first verifying that insurance covers any loss of life or damage that may result from this work. The Regional District, in granting approval for blasting, does not in any way assume responsibility for injury, loss of life, or damage that results there from, and such approval shall not be construed as approval of the methods employed in blasting, the sole responsibility therefore being that of the applicant.

5. Site Maintenance and Clean Up

The working area shall be maintained in an orderly manner and shall not be encumbered with equipment, materials, or debris.

Clean up shall be a continuing process from the start of the work to final acceptance of the project. Property on which work is in progress shall at all times be kept free from accumulations of waste materials or rubbish. Accumulations of waste materials, which might constitute a fire hazard, shall not be permitted. Spillage from hauling vehicles on traveled public or private roads shall be promptly cleaned up. On completion of construction, all temporary structures, rubbish, and waste materials resulting from the operations, shall be removed.

6. Erosion and Sediment Control

An Erosion and Sediment Control Plan shall be submitted for review and approval seven days prior to the pre-construction meeting. The Erosion and Sediment Control Plan shall describe the proposed methodology to minimize potential impact on the surrounding environment. The Erosion and Sediment Control Plan shall indicate how the Contractor plans to control sediment discharges from the project and what measures will be put in place to prevent damage to aquatic habitat located downstream.

The work shall be carried out in compliance with the submitted and approved Erosion and Sediment Control Plan and all other environmental laws affecting the work and with the recommendations contained in the most recent edition of the "Land and Development Guidelines for the Protection of Aquatic Habitat" published jointly the Ministry of Environment and Fisheries and Oceans Canada.

For the erosion and sediment control plan, 'environmental laws' means all statutes, regulations, orders, and bylaws relating in any way to the natural environment or its ecosystems, public or occupational health, transportation, storage or handling of contaminants or hazardous materials.

3.2 Existing Structures and Utility Works

1. Scope

Existing structures shall be interpreted as being all existing pipes, ducts, ditches, or other works forming a part of sewerage, drainage, water, telephone, electrical, gas, or other utility system, as well as sidewalks, curbs, poles, fences, buildings, and other man-made things that may be encountered during construction.

2. Material Supply

Unless specified otherwise, materials supplied for replacement of existing structures shall be at least equal to those being replaced.

3. Location of Structures

Drawings or descriptions, verbal or otherwise, of existing structures or their location that are supplied by the Regional District are intended only as an aid to locating these structures. Measurements and location of the existing underground structures shown on the drawings are not guaranteed to be accurate, and must be verified prior to proceeding with construction.

4. Protection of Structures

Unless authorization from the Regional District is received for their removal, underground and surface structures encountered during construction shall be protected from damage. In the event of damage resulting from the construction operation, structures shall be repaired or replaced to a condition, which is at least the equivalent of that which existed prior to construction.

5. Emergency Situations

In emergency situations resulting from the construction operation, where life or property are endangered, the applicant shall immediately take whatever action is possible to eliminate the danger, and shall also notify the Regional District of the situation.

6. Access Maintained

Existing hydrants, valve or control pit covers, valve boxes, curb stop boxes, fire or police call boxes, and all other utility controls, warning systems, and appurtenances thereof shall not be constructed or made inaccessible at any time by the construction work. Bridges, walks, or other temporary facilities shall be provided as may be necessary to ensure that these controls or warning systems are free for use in their normal manner at all times during construction.

7. Curtailment of Utility Service

Where existing utilities such as water, sewer, electricity, telephone, and gas are serving the public, work shall be planned and executed such that there is no curtailment of service provided by these utilities without prior receipt of approval of the authorities responsible for provision and maintenance of these utilities. The applicant shall obtain the above approvals from the recognized authorities controlling these utilities. If approval for such disruption of utility service is not granted, it may be possible to establish temporary facilities to provide continuous utility service during the course of construction. Such temporary facilities shall only be implemented after receiving the approval of the utility authority.

If approval is received to temporarily shut off an existing utility, individual users of the utility shall be notified at least one hour prior to the time of shut-off.

If there is going to be a shut-off, the Fire Department shall be notified at least one hour prior to shut-off time.

8. Support of Structures

Existing structures shall be protected against damage from settlement by means of timber support or compaction of backfill as required. Where necessary, timber support shall remain in place following backfill of excavations.

Backfill which is placed under or adjacent to the existing structures, which have been undermined during excavation, shall be compacted in a manner which will prevent damage of the structure from settlement. Such backfill shall be of approved granular material suitable for compaction.

On existing piping, this material shall extend horizontally a minimum distance of 600 mm on both sides of the pipe at a level 300 mm above the pipe, and shall slope down from this point at 1-1/2 horizontal to 1 vertical to meet the bottom of the excavation.

9. Drainage Facilities

Existing culverts, enclosed drains, flumes and ditches, and other drainage structures affected by the work but left in place shall be kept clear of excavated material at all times during construction. When it is necessary to temporarily remove an existing drainage structure, suitable temporary ditches or other approved means of handling the drainage shall be provided during construction.

3.3 Clearing

Prior to clearing, the exact limits of the areas on which clearing may take place and whether or not there are restrictions placed on clearing which would result in leaving certain trees, structures, or other existing items in place shall be ascertained.

Prior to trenching, the right-of-way shall be cleared of all standing or fallen brush, timber, stumps, or other debris, which may obstruct the construction operation, damage the completed installation, or detract from the appearance of the site on completion of construction. This material shall be burned or otherwise disposed of to the satisfaction of the Regional District.

The restrictions of all authorities established to control burning in the area shall be complied with. If burning cannot be done on the clearing site, the material shall be hauled to an approved location for burning or disposal. Burning permits, as required, shall be obtained by the applicant.

3.4 Trench Alignment and Depth

Following clearing and prior to excavation of the trench, the location at which the pipe shall be installed shall be established by setting stakes at 20.0 m intervals along a line offset from the centre of the proposed pipeline.

Where pipe is to be installed to a predetermined grade, a cut sheet will be provided showing the depth of the pipe invert relative to the grade stake elevation at the respective locations along the pipeline.

The trench shall be excavated so that pipe can be laid to the established alignment and depth, with allowance made for specified trench wall clearances and bedding as shown in Drawings W-1, W-2, and W-3 of this Schedule for various conditions, or otherwise required.

All trenching and excavations shall be carried out in the manner recommended by the Workers' Compensation Board of British Columbia, or as may be necessary to protect life, property, and structures adjacent to the work and the work itself.

3.5 Pipe Installation

In general, and without limiting the clauses set out in this Standard, pipe shall be installed in accordance with the following specifications:

Ductile Iron Main	AWWA C600
Steel Mains	AWWA C603
PVC Mains	AWWA C900

3.6 Trench Backfill

Trench backfill shall be carried out as shown in Drawings W-1, W-2, and W-3 of this Schedule for various conditions.

3.7 Repairs

Any system approved and built to these standards which requires maintenance work, shall be repaired with materials and construction methods conforming to the specifications contained herein.

4. TESTING AND DISINFECTION

4.1 Written Reports

The applicant shall submit reports to the Regional District certified by a Design Professional of the tests and chlorination requirements specified herein.

4.2 Leakage Tests

Following final trench backfilling, leakage tests shall be performed on all installed piping.

Leakage tests shall be carried out between valved sections of the installation such that every valve in the system is tested for leakage in the shut-off position.

Leakage tests shall be performed in the following manner. The section to be tested shall be filled with water and all air expelled from the piping. It is recommended that the test section be filled with water for at least 24 hours prior to testing. By pumping water into the test section, the pressure within the piping shall be increased to 0.7 MPa, or 1-1/2 times the system operating pressure at the point of test, whichever is the greater. This pressure shall be maintained constantly in the pipe throughout the duration of the test by the addition of make-up water. The duration of the test section to maintain the specified pressure over the period of test shall be considered to be the leakage.

Piping will not be accepted until the leakage is less than the maximum allowable leakage determined from the following formula:

$$L = ND \times \text{the square root of } P$$

in which L = the allowable leakage in litres per hour,
N = the number of joints in the test section,
D = the nominal diameter of the pipe in millimetre, and
P = the average test pressure during the leakage test in megapascals.

Should any test disclose leakage greater than that specified above, the defect shall be located and repaired, and the section shall be retested to ensure that the leakage is within the allowable limits.

4.3 Flushing

The pipe shall be cleaned of dirt and other foreign materials. The pipe shall be flushed at water velocities of 1.0 m/s, or as high a velocity as can be obtained from the available water sources. Flushing water shall be discharged to watercourses or ditches that have sufficient capacity to carry the flow. Measures shall be taken to avoid any damage to fish habitat or to fish and other aquatic life.

4.4 Chlorination

On completion of the flushing operation, main pipes and services shall be chlorinated. Chlorination procedures shall conform to AWWA C651.

On completion of chlorination, the entire piping system shall be thoroughly flushed of all highly chlorinated water and filled with normal system water at a slow rate to avoid stirring deposits from existing mains, sampled in accordance with VIHA, and following satisfactory test results left in a condition ready for use.

Water reservoirs and storage tanks shall be disinfected in accordance with AWWA C652, and wells in accordance with AWWA C654.

Chlorinated water shall be disposed of in such a way as to not cause harm or damage to fish, vegetation or aquatic life in bodies of water or water courses; all federal and provincial regulations and/or guidelines on disposing of chlorinated water to the environment shall be followed.

4.5 Inspection

The Regional District shall be given 48 hour notice of all tests and chlorination.

5. TRANSFERRING THE WATER SYSTEM TO THE RDN

5.1 Final Inspection by RDN

Prior to requesting a Final Inspection, the Design Professional shall submit to the Regional District complete Record Documents, a completed Certification of Installed Works, all applicable test results (chlorination, pressure, leakage, health, commissioning, etc.), and Certificate of Approval for electrical works (pump stations, wells, lighting, controls, etc.) The Final Inspection shall be arranged by the Design Professional on completion of the work. This shall be directed by the Design Professional in the presence of approved representatives of the Regional District and the installation Contractor. A complete list of deficiencies identified during the final inspection shall be prepared by the Design Professional. Once the deficiencies have been satisfactorily rectified, the Design Professional shall so notify the Regional District. The date of the Final Inspection will generally be regarded as the commencement of the guarantee period, unless significant deficiencies critical to the effective operation of the system are found at the inspection, at the discretion of the Regional District.

5.2 Preparation/Execution of Transfer Agreement by Developer

The Developer shall prepare and execute a Draft Transfer Agreement for the works and submit the document to the Regional District for review/comment. Once approved by the Regional District the Developer shall complete the document and execute it accordingly and submit to the Regional District for them to execute. The date of the Transfer Agreement shall be the date on which the Regional District executes the document.

5.3 Preparation/Execution of Maintenance Agreement

The Developer shall prepare and execute a Draft Maintenance Agreement for the works and submit the document to the Regional District for review/comment. Once approved by the Regional District the Developer shall complete the document and execute it accordingly and submit to the Regional District for them to execute.

The Developer shall guarantee the workmanship and the performance of the work as per the Maintenance Agreement, from the date of acceptance (generally the date on which the Regional District executes the Transfer Agreement) for a period of two years. This shall be additionally secured by way of cash or an irrevocable letter of credit suitable to the Regional District in the amount of 10% of the cost of construction as certified by the Design Professional or \$10,000.00 (whichever is greater). There will be no interest paid on this security.

The RDN may reduce the length of the guarantee period and/or the amount of the security. The RDN may also require additional payment, or payout a credit as appropriate, related to an adjustment of the initial engineering fee to final construction cost values, in accordance with RDN Bylaw 1259.03 or most recent amendment. Any change to the guarantee period, security amount or the engineering fee is required to be in writing.

5.4 Preparation/Execution of Latecomer Agreement

Where a latecomer agreement may be applicable to a portion of the costs of the works, as agreed by the Regional District and any other applicable jurisdictions, the Developer shall pay all costs of both the Regional District and the Developer associated with the preparation, execution, and registration of the necessary Latecomer Agreement. The Regional District will assume any internal staff costs involved in planning, reviewing, approving, and administering the Latecomer Agreement preparation, and any administrative and financial costs involved during the effective time-period of the agreement. Based on current legislation, a Latecomer Agreement expires 10 years after its initial registration.

5.5 Letter of Acceptance of the Works by RDN

Following completion of all the foregoing requirements, the Regional District will issue the formal Letter of Acceptance of the Works.

The Regional District will also issue a written statement that the new works can be connected to the District's existing system. Such connection shall be undertaken by the applicant under the direct supervision of the District or by the District at a cost to the applicant.

LETTER OF ASSURANCE

LETTER OF ASSURANCE

NOTE:

To be submitted at time of Feasibility Review

To: Manager of Engineering Services
 Regional District of Nanaimo
 6300 Hammond Bay Road
 Nanaimo BC V9T 6N2

RE: _____

 (Project)

Date: _____, 20__.

This will confirm that (Developer _____) has retained (Consultant _____) to provide, design, contract administration, inspection and as-constructed drawings for this project all in accordance with the current bylaws and standards of the Regional District and in accordance with good engineering practice.

(Developer)

This confirms we have accepted this assignment on the above terms.

(Consultant)

APPENDIX 3

CERTIFICATE OF DESIGN

CERTIFICATE OF DESIGN

I, _____, a Professional Engineer registered in the Province of British Columbia, hereby certify that the works as herein set out on the attached drawings entitled _____

have been designed in accordance with the Regional District of Nanaimo Bylaw 500 and/or in accordance with good engineering practice where such design is not covered by the Regional District Bylaw 500.

I have been retained to provide design, supervision, full-time inspection, as-built drawings, and final certification for this project by:

(Name of Client)

I am satisfied that in the contractual mandate which exists between myself and my client, the terms of reference will permit me to render a level of supervision of the construction work which will allow me to put my name and seal to the "Certification of Installed Works" required by the Regional District of Nanaimo, a sample of which is attached to this document and initialed by me.

In the event that my client releases me from this project, or in the event that I find the terms of reference do not permit me to render a level of supervision of the construction work which will allow me to put my name and seal to the form of certification required by the Regional District of Nanaimo, I will notify the Regional District within twenty-four (24) hours verbally and follow it up with written confirmation and clarification.

Signed this _____ day of _____, 20____.

_____, P.Eng.
(signature)

(name printed)

I understand that the "Certification of Installed Works" is to be completed in this format and submitted with the "as-constructed" drawings.

CERTIFICATION OF INSTALLED WORKS

CERTIFICATION OF INSTALLED WORKS

NOTE: To be completed in this format and submitted with the 'As-Built' drawings

Location of the Construction Site and Works: (Legal Description / Location)

all within the Regional District of Nanaimo, British Columbia.

I, _____, a Registered Professional Engineer (Reg. No. _____) in the Province of British Columbia, hereby certify:

1. THAT the following construction tests were carried out to confirm that construction met the specifications required:

- a) _____
- b) _____
- c) _____
- d) _____
- e) _____
- f) _____

2. THAT I was able to monitor the construction and provide a level of supervision of the construction work sufficient to be able to confirm that the specifications in force and effect by the Regional District of Nanaimo and in the applicable design drawings for the said Works were generally met during the Construction Period; and

3. THAT the accompanying plans labeled:

- (i) _____
- (ii) _____
- (iii) _____

accurately record the materials, grades, inverts, offsets and dimensions of the constructed work.

DATED this _____ day of _____, 20 _____.

APPENDIX 5

**OUTLINE FOR WELLHEAD PROTECTION REPORT
(MINIMUM REQUIREMENTS)**

OUTLINE FOR WELLHEAD PROTECTION REPORT

(Version: November 19, 2009)

Acceptable Preliminary Well Head Protection Plan (WHPP) for New Wells supplied to the RDN by/for private land development (to be prepared by a qualified professional in ground water and well head protection and approved by the RDN prior to appointment).

Below are the minimum requirements for this Document:

Name of the Plan (WHPP), describe the well #'s, legal location of well(s), client, development for which the well is being provided and client file number.

1.0 INTRODUCTION

2.0 BACKGROUND

- 2.1 SITE DESCRIPTION (including a sketch of the current and proposed lot boundaries, locations of wells on current and proposed lots plus on adjacent properties, locations of sewage disposal fields, drainage ditches, dry wells or infiltrations areas, all surface bodies [either permanent and/or intermittent] and other relevant information)
- 2.2 OVERVIEW OF WELL PROTECTION PLANNING
- 2.3 SCOPE OF WORK

3.0 NOTES of MEETINGS with RDN, DEVELOPER, CONSULTANT, etc.

4.0 NOTES of DISCUSSIONS WITH VIHA STAFF

5.0 HYDROGEOLOGIC CONDITIONS

- 5.1 CLIMATE
- 5.2 TOPOGRAPHY AND SURFACE WATER DRAINAGE
- 5.3 GEOLOGY
- 5.4 LOCAL AQUIFERS (include sketch showing aquifer extent and boundaries if present, well head and static water level elevation, areas of recharge and discharge and direction of groundwater flow under natural conditions)
- 5.5 LOCAL GROUNDWATER USE (number and location of wells and estimates of seasonal water use)
- 5.6 WATER QUALITY (identify where the water quality exceeds guidelines and specifically iron and manganese)
- 5.7 NEW AND EXISTING WELLS ON PROPOSED LOTS (to include information on total well depth and depth of fractures producing groundwater or well screens. Also include testing and yield evaluation results. All pumping test data and well logs to be included with report)
- 5.8 COMPLIANCE OF WELLS WITH BC GROUNDWATER PROTECTION REGULATIONS
- 5.9 ASSESSMENT OF POTENTIAL FOR MUTUAL WELL INTERFERENCE

6.0 CURRENT ZONING OF WELL HEAD AND PROPOSED AND ADJACENT CURRENT LAND USE (within minimum 1 kilometre of well(s))

7.0 PRELIMINARY WELL HEAD PROTECTION PLAN

- 7.1 WELL HEAD PROTECTION AREA
- 7.2 AREAS OF POTENTIAL ENVIRONMENTAL CONCERN
 - 7.2.1 WELLS AS A POTENTIAL CONDUIT TO THE SUB-SURFACE
 - 7.2.2 SEWAGE DISPOSAL SEPTIC FIELDS
 - 7.2.3 STORMWATER DISPOSAL
 - 7.2.4 HEATING OIL ABOVE GROUND AND UNDERGROUND STORAGE TANKS
 - 7.2.5 HISTORICAL OPERATIONS (ON SITE AS WELL AS ADJACENT TO SITE)
 - 7.2.6 POTENTIAL FOR SALTWATER INTRUSION
- 7.3 DETERMINATION OF WELL HEAD CAPTURE ZONE (include background on methodologies to determine zones, why specific method was used and assumptions incorporated into analysis)
- 7.4 RECOMMENDATIONS FOR WELL PROTECTION AREA MANAGEMENT
 - 7.4.1 WELL CONSTRUCTION AND CLOSURE ISSUES
 - 7.4.2 SEWAGE DISPOSAL SEPTIC FIELD SYSTEMS
 - 7.4.3 STORMWATER DISPOSAL MANAGEMENT
 - 7.4.4 HEATING OIL UNDERGROUND STORAGE TANKS
 - 7.4.5 MONITORING SPECIFIC TO SALTWATER INTRUSION
 - 7.4.6 WATER QUALITY MONITORING

8.0 CONCLUSION AND RECOMMENDATIONS (ALSO INCLUDE ANY COST ASSOCIATED WITH RECOMMENDATIONS)

9.0 COMMITMENT FOR ANNUAL MONITORING AND REPORTING ON WHPP TO RDN

STANDBY IRREVOCABLE LETTER OF CREDIT

[BANK LETTERHEAD]

Letter of Credit No.	_____	Amount:	_____
Applicant	_____	Initial Expiry Date:	_____
	_____	Beneficiary:	_____

For the account of _____
(Name of Customer)

up to an aggregate amount of _____ available on demand.

Pursuant to the request of our customer, we hereby establish and give you a Standby Irrevocable Letter of Credit in your favour in the above amount which may be drawn on by you at any time and from time to time, upon written demand for payment made upon us by you, which demand we shall honour without enquiring whether you have the right as between yourself and the said customer to make such demand, and without recognizing any claim of our said customer, or objection by it to payment by us.

This Letter of Credit relates to those Regional District of Nanaimo services and financial obligations set out in an Agreement between the customer and the Regional District of Nanaimo and briefly described as:

The amount of this Letter of Credit may be reduced from time to time as advised by notice in writing to us by the Regional District of Nanaimo.

Partial or full drawings may be made.

This Letter of Credit shall expire at 3:00 p.m. on _____. This Letter of Credit will continue in force for a period of 1 year, but shall be subject to the condition hereinafter set forth.

It is a condition of the Letter of credit that it shall be deemed to be automatically extended without amendment from year to year from the present or any future expiration date hereof, unless at least 30 days prior to the present or any future expiration date, we notify you in writing by registered mail, that we elect not to consider this Letter of Credit to be renewable for any additional period. This Letter of Credit is subject to the Uniform Custom and Practice for Documentary Credits (1993 Revision) International Chamber of Commerce Publication No. 500.

DATED at _____, British Columbia, this ____ day of _____, 20__.

SCHEDULE '4D'

COMMUNITY SEWER SYSTEM STANDARDS

REGIONAL DISTRICT OF NANAIMO

BYLAW NO. 500

SCHEDULE '4D'

STANDARDS FOR PUBLIC SEWER SYSTEMS

TABLE OF CONTENTS

1.	GENERAL	3
	1.1 Definitions	3
	1.2 Applications and Approvals	4
	1.3 Drawings and Specifications	6
2.	DESIGN	6
	2.1 Sewage Quantity	6
	2.2 Sewage Quality	9
	2.3 Hydraulics	9
	2.4 Sewers	10
	2.5 Pumping Systems	11
3.	CONSTRUCTION	11
	3.1 Sewers	12
	3.2 Pumping Stations	15

1. GENERAL

1.1 Definitions

In these Standards unless the context otherwise requires,

ADWF means Average Dry Weather Flow;

AWWF means Average Wet Weather Flow;

B.O.D. means the quantity of oxygen utilized in the biochemical oxidation of organic matter under standard laboratory procedure in 5 days at 20°C, expressed in mg/l;

collection facility means a facility used for the collection and conveyance of sanitary sewage;

comminuted garbage means the wastes from the preparation, cooking and dispensing of food that have been shredded to such a degree that all particles will be carried freely under the flow conditions normally prevailing in public sewers, with no particle greater than 6 mm in any dimension;

design flow means peak sewage flow plus peak stormwater infiltration;

direct service area means land and improvements directly served by the proposed facility;

facilities means sewers, sewage treatment and disposal plants, pumping stations and other works necessary thereto, and outlets for carrying off, treating and disposing of sewage, and includes any and all works, structures, lands, conveniences, incidental to and necessary for a sewerage system;

garbage means solid wastes from domestic and commercial preparation, cooking and dispensing of food, and from the handling, storage and sale of produce;

industrial waste means liquid waste from industrial manufacturing processes, trade or business, as distinct from sanitary sewage;

lateral sewer means sewer serving more than a single subdivided parcel;

lpcpd means litres per capita per day;

l/s means litres per second;

member municipality or **member** means a municipality or improvement district within the Regional District of Nanaimo;

mg/l means milligrams per litre;

MPa means megapascals (1000kPa);

m³/ha means cubic metres per hectare;

m³pd means cubic metres per day;

pH means the logarithm of the reciprocal of the weight of hydrogen ions in grams per litre of solution;

ppm means parts per million parts;

sanitary sewage means sewage having a quality substantially equal to that of normal domestic sewage;

sanitary sewer means a sewer which carries sewage and to which storm, surface and ground waters are not intentionally admitted;

service connection means a sewer connecting a subdivided lot to the lateral sewer;

sewage treatment plant means an arrangement of structures and devices used for treating sewage;

stormwater infiltration means the infiltration of groundwater or inflow of stormwater through leaks and connections into the system;

suspended solids means solids that either float on the surface of, or are in suspension in water, sewage or other liquids, and which are removable by laboratory filtering;

tributary area means all land in the service area tributary to the proposed facility;

1.2 Applications and Approvals

1) General

Applications shall be made to the District for all proposed construction of sewerage facilities within the area of the District. All applications shall be made in not less than three steps as hereafter summarized:

- a) the request to the District for a review of the feasibility of the proposed work;
- b) the submission of detailed construction plans and specifications to the District for approval;
- c) the submission of a signed statement from a registered professional engineer that the work has been completed in accordance with these Standards and is ready for acceptance by the District.

2) Feasibility Review

All proposed construction of sewerage facilities within the area of the Regional District shall be submitted to the Regional District in duplicate for a feasibility review prior to commencement of any detailed design or construction. The submission shall include a plan of the proposed construction and of the area it will serve.

The District will review the proposal and submit a written report to the applicant which will comment on the feasibility of sewerage service.

The review report may also include a general layout of the proposed works that is compatible with the District's master planning for the subject area, and that indicates approximate locations, minimum pipe sizes, design quantities, design qualities, and points of connection to both the downstream system for discharge and possible upstream system or systems for future extensions.

Should the applicant desire to proceed with the proposed work on the basis of the feasibility review, the District shall be so notified and detailed design may commence.

3) Detailed Design

Detailed design shall be done by a registered professional engineer and shall conform to the feasibility review, these Standards and all applicable legislation.

Following detailed design, plans and specifications shall be submitted in duplicate to the District for approval before any construction is started.

The District will review the detailed plans and specifications, mark these with any necessary revisions, and return the plans and specifications to the applicant either approved as noted or with a request for re-submission, as the case may be. Re-submissions shall be carried out as above until the District approves the detailed plans and specifications.

4) Permits and Certificates

In the case of a new treatment and disposal facility, the District will make application in the District's name to the Ministry of the Environment for a permit.

All other submissions necessary to proceed with construction shall be the responsibility of the applicant.

5) Construction

The applicant shall construct the proposed work in accordance with the plans and specifications approved by the District.

The District will inspect construction from time to time for conformity to these Standards. There will be no charge for such inspections. The applicant shall be responsible for construction layouts, detailed field supervision of the work and the preparation of as constructed drawings.

6) Completion, Acceptance and Connection

Once the work is completed, a statement by a registered professional engineer shall be submitted to the Regional District along with two sets of as-constructed drawings certifying that the work has been constructed under the engineer's supervision and that it is completed in accordance with the as-constructed plans and specifications. One set of as-constructed plans shall be on 3 mil mylar material.

The Regional District shall then make a final inspection, and when it is satisfied the work is acceptable the applicant shall:

- a) guarantee the workmanship and performance of the work for a period of one year for collection systems and five years for treatment and disposal systems by way of cash or an irrevocable letter of credit in the amount of 5% of the cost of construction as certified by a professional engineer; and

b) convey the works to the Regional District.

Upon compliance with the above items, the Regional District shall issue a written statement that the new works can be connected to the District's existing system. Such connection shall be undertaken by the applicant under the direct supervision of the District or by the District at cost to the applicant.

1.3 Drawings and Specifications

1) Drawings

Drawings shall be done in metric units on ISO A1 size paper, 594 mm by 841 mm.

All drawings shall include a key plan, location plan and plans and profiles or sections of the proposed work to a suitable scale. Sufficient blow-ups to indicate construction details shall be included.

For sewer pipes, the plans shall show the offset of the work in relation to property lines and the profiles shall show pipe grades, ground surface, underground utilities, basement elevations and any design grade limitations. Detailed drawings shall be complete with manhole details, trench sections, trench dam details, and details of service connections. Scales shall normally be 1:500 horizontal and 1:50 vertical.

For other work, the drawings shall clearly indicate all construction details and summarize design and operational data such as pump characteristics, hydraulic profiles and parameters relating to the design and operation of treatment systems.

As constructed drawings shall be reproducible 3 mil mylars.

2) Specifications

Specifications shall incorporate the general requirements of these standards and shall be expanded to include detailed specifications to complement the drawings.

2. DESIGN

2.1 Sewage Quantity

- 1) In general, provision shall not be made in sanitary sewer system designs for the deliberate addition of stormwater.
- 2) Design sewage rates of flow shall be computed by adding peak sewage flow to peak stormwater infiltration.
- 3) Peak sewage flow shall be established by multiplying the peak unit AWWF shown in Section 2.1 by the design contributory population except in industrial and commercial areas where other methods, approved by the District, may be used.
- 4) Peak stormwater infiltration shall be calculated on the basis of 10 m³/ha of design tributary area per day.
- 5) Design contributory populations shall be computed in accordance with the Regional District of Nanaimo population predictions or with the ultimate planned development in the tributary area, whichever is the larger.

- 6) In the absence of detailed population information, the following minimum design population densities shall be used:
- | | | |
|----|--|----------------|
| 1) | One dwelling unit/parcel | 30 persons/ha |
| 2) | two dwelling units/parcel | 50 persons/ha |
| 3) | Multiple dwelling unit development | 125 persons/ha |
| 4) | Industrial and Commercial zoning - equivalent of | 50 persons/ha |

REGIONAL DISTRICT OF NANAIMO

BYLAW NO. 500

TABLE 1

DESIGN - PEAK SEWAGE FLOW

2.2 Sewage Quality

- 1) Design quality criteria for domestic sewage shall be as follows:

Sewage Quantity (ADWF) in the Direct Service Area	Constituent	Average Normal
less than 50m ³ pd	BOD - 5 day 20°C	1000 mg/l
	Suspended Solids	800 mg/l
	pH	4 - 10.5
	Temperature	79°C
50 to 450m ³ pd	BOD - 5 day 20°C	400 mg/l
	Suspended Solids	300 mg/l
	pH	5 - 9.5
	Temperature	66°C
over 450m ³ pd	BOD	200 mg/l
	Suspended Solids	200 mg/l
	pH	5.5 - 9.0
	Temperature	54°C

- 2) Where the existing industrial and/or commercial developments will be connected to the sewer system, the District may require that flow sampling be carried out to determine the design loadings; re-treatment of wastewater prior to discharge to the District's facilities may be required.

2.3 Hydraulics

- 1) All facilities shall be designed to convey peak sewage flow plus peak stormwater infiltration (design flow).
- 2) Sewers shall be designed to carry design flow at a minimum velocity of 0.67 m/s. When carrying the design flow the maximum depth of flow shall not exceed the following:

250 mm and smaller	- one-half pipe diameter
300 mm to 400 mm	- three-quarter pipe diameter
50 mm and over	- full pipe diameter
- 3) Service connections shall be designed for a minimum velocity of 0.90 m/s when flowing full.
- 4) The minimum velocity in a forcemain shall be 0.76 m/s.
- 5) Manning's Roughness Coefficient of 0.013 shall be used for design of sewers and service connections. Manning's Roughness Coefficient of 0.015 shall be used for forcemains and outfalls.
- 6) Manholes shall be designed to incorporate a minimum elevation differential of 30 mm in addition to the normal grade of the lateral sewer, wherever a horizontal deflection exceeding 450 occurs.

- 7) Pumping stations and treatment and disposal works shall be designed to process all peak sewage flows plus stormwater infiltration. Bypassing of works to disposal shall not be allowed except under emergency conditions.

2.4 Sewers

1) Lateral Sewer Size

No lateral sewer shall be less than 200 mm in diameter, except that 150 mm diameter will be acceptable in the final section of a lateral that cannot be extended.

2) Service Connections

No service connections shall be less than 100 mm in diameter. Service connections serving more than two dwelling units shall be sized in accordance with design flows and available grades. No service connections shall exceed a length of 15.0 m as measured horizontally between the lateral sewer and the property line, unless adequate cleanout facilities are provided.

3) Depths

Depths of all sewers shall be such that all basements in the area the sewer is intended to serve can be drained by gravity, except that lift stations from individual homes may be acceptable under special circumstances of location and topography.

Minimum cover on lateral sewers shall be 1.5 m in travelled roads and 1.0 m elsewhere unless adequate concrete protection is used.

Minimum cover on service connections shall be 0.75 m unless adequate concrete protection is used.

Where service connection standpipes at property line exceed 1.8 m in depth, the standpipe shall be constructed in two or more sections, each having a length not exceeding 1.8 m.

4) Manholes

In general, distances between manholes shall not exceed 120 m.

Manholes shall be located at grade changes, at sewer size changes, at the upstream end of all sewers, at the junctions of all sewers and at the junctions of lateral sewers and service connections 150 mm in size and larger.

Cleanouts will be permitted at the upstream end of lateral sewers not designed for extension.

Where the difference in elevation between incoming and outgoing sewers exceeds 600 mm, standard drops shall be used as shown in the Standard Drawings.

5) Curved Sewers

Wherever possible, curved alignment shall be avoided.

Horizontal curves may be permitted where the configuration of the right of way permits curvature at a constant offset.

Vertical curves may be permitted under special circumstances where excessive cuts are to be avoided and where energy dissipation is required.

Radius of curvature shall be uniform throughout the curves and shall not be less than 60.0 m. Compound curves shall not be permitted between manholes.

6) Location of Sewers

Wherever possible, sewers shall be located on the high side of the street where only the high side is served by the lateral and on the low side of the street where both sides are served by the lateral. Wherever possible, the sewer shall be located on the opposite side from the watermain and at a constant offset from the property line.

Where practical, sanitary lateral sewers and service connections shall not be less than 3.0 m distant from all water pipes.

2.5 Pumping Systems

1) Pumping Stations

This section applies to all pumping stations other than those serving individual homes, except that large pumping stations will be considered as special cases.

Pumping stations shall be constructed using first class material of recognized quality for sewerage service.

As a minimum requirement all stations shall be equipped with alternating duplex pumping units of the following type:

- a) Pneumatic Ejectors;
- b) Grinder or Vortex type pumping units capable of handling of 75 mm diameter solid;
- c) Non-clog type pumping units capable of handling a 75 mm diameter solid.

Duplex pumps shall be designed for 100% standby at design flow. In stations employing more than two pumps, the pumps shall be capable of pumping design flow with any one pump out of service.

Stations other than those employing submersible pumping units shall have the pump motors and controls located in a ventilated, heated, lighted and dehumidified area.

All stations shall have a wet well capacity providing not more than 12 hours detention at minimum design flows and a frequency of pump start-up of not less than 5 minutes at peak flows.

All piping and valves shall have a minimum diameter of 100 mm.

All stations shall have acceptable emergency overflows for electrical and mechanical failures. Such overflows shall not be designed to meet excess flows.

Pump selection shall allow forcemains to be designed for a 0.76 m/s minimum velocity and a detention time at minimum design ADWF not exceeding 12 hours.

All pumping stations shall be equipped with high level and motor overload alarms acceptable to the District.

2) Lift Stations for Individual Homes

Lift installations serving single individual homes shall conform to the requirements of all relevant legislation.

3. CONSTRUCTION

3.1 Sewers

1) Pipes and Fittings

Pipes for sewers and service connections shall comply with the following:

Size	Specification
Connections:	
100 mm & 150 mm	Asbestos Cement, Building Sewer, CGSD 34-GP-96 Standard
100 mm & 150 mm	PVC, SDR 28, ASTM D 3034 Specification
Sewer:	
150 mm & up	Asbestos Cement, Minimum Class 2400, ASTM C 428 Specification
150 mm to 300 mm	PVC, SDR 35, ASTM D 3034 and ASTM D 2414 Specifications
150 mm to 600 mm	Concrete minimum Class B, non-reinforced, ASTM C 14 Specification
300 mm & up	Concrete, reinforced, ASTM C 76 Specification

Fittings for service connections shall be the same material and strength as the pipe and shall be recommended for use by the pipe manufacturer.

2) Concrete

Concrete for sewer work shall be ready-mix and shall be supplied from one approved dealer of ready-mix concrete. The equipment and methods of the ready-mixing plant shall conform to CSA A 23.1.

All concrete shall contain an air entrainment agent to provide 4 to 6% air content.

Concrete mixes for the following classes of concrete shall be designed as follows:

Class	Minimum Compression Size Strength at 28 Days MPa	Nominal Coarse Aggregate mm	Maximum Slump mm	Use
A	21	25	75	Septic Tanks & Manhole Bases
B	14	25	100	Mass Concrete

3) Reinforcing Steel

Reinforcing bars shall be new deformed bars free of loose scale, grease and encrusted concrete. Reinforcement shall be intermediate grade steel conforming to CSA G 30.12, Grade 40.

Wire for tying reinforcement shall be black annealed wire not less than 1.6 mm.

4) Bedding Material

Pipe bedding shall comprise a well graded 19 mm minus gravel or crushed rock which compacts readily. Bedding material shall extend for 100 mm beneath the pipe to 300 mm above the top of the pipe. *See Table 2 of this Schedule.*

5) Trench Dams

Trench dams shall be used where trench grade exceeds 10%. See Table 3 of this Schedule.

6) Manholes

Manholes shall be minimum 1050 mm diameter reinforced concrete sections conforming to ASTM C.78 Specifications. Joints shall be watertight. Covers shall be cast iron. Drop connections shall be provided when drops exceed 600 mm. *See Tables 4, 5 and 6 of this Schedule.*

7) Connection, Testing and Flushing

Connection to the District's system shall be carried out under the direct supervision of the District. Forty-eight hours notice shall be given to the District of intent to connect.

The District will install a plug(s) in the existing pipe(s) in the District manhole(s) or end of clean-out(s) to permit testing and flushing to proceed.

Leakage tests shall be made on all the sewers and manholes. Each run of sewer shall be tested immediately after completion of the manholes included in the test. Any arrangement of testing equipment which will provide readily observable and reasonably accurate measurements of leakage under the specified conditions will

be acceptable. Leakage tests shall be conducted by measuring the exfiltration of water from the filled sewer during the test period.

Exfiltration tests shall be conducted by plugging all openings in the test section, except the upstream manhole and filling it with water so that the effective head above the crown of the highest pipe in the section of the sewer under test is at least 600 mm. The maximum hydrostatic head in an exfiltration test shall be 3.0 m. T-branches shall be installed on the sewer from which shorter sections with pressure head of not more than 3.0 m can be tested, after inserting a length of vertical pipe. The lower end of the upper section(s) of such steep grades shall be closed by letting an inflatable test plug on a rope into the lower end of the section to be tested. The amount of leakage shall be observed by measuring the quantity of water necessary to maintain the level in the manhole or vertical pipe at a testing Tee for a period of at least 1 hour. Calculation of the leakage by measuring the drops in the water level in the upstream manhole or vertical pipe at a testing Tee is not acceptable.

For all sewers the allowable leakage in litres = $HDL/840$

Where H = duration of test in hours
 D = inside diameter of the pipe in millimetres
 L = length of pipe in the test section in metres.

No leakage shall be permitted in manholes.

If leakage exceeds the permissible amount, the leak or leaks shall be detected, approved corrective measures taken, and the sections re-tested. The corrective measures may comprise removal and replacement of the defective work.

If excessive infiltration of groundwater is observed during the final inspection, the cause of infiltration shall be found and corrective measures taken.

Prior to final inspection of the installed and tested sewer, each run shall be flushed by passing through a large flow of water and a rubber ball or test plug having a minimum dimension of at least 9/10 of the diameter of the pipe. All foreign material found in the sewers and appurtenances shall be removed.

Discharge of flushing water to the existing sewers will not be permitted, except with the express approval of the District.

After all construction is completed, including testing and flushing, the applicant or the member municipality shall submit a certified statement from a registered professional engineer that the work has been done under his supervision and has been completed in accordance with these Standards.

Permission will then be granted in writing by the District for connection to the District's system.

The connection shall be made as outlined in Section 1.4.

At the option of the applicant, leakage tests may also be conducted by using air instead of water provided the testing equipment, procedures and allowable leakage rates are first approved by the District.

3.2 Pumping Stations

1) Specifications

Detailed construction specifications shall be prepared by the applicant's professional engineer for both pumping unit supply and station construction.

Such specifications shall be specifically tailored to the pumping station and shall not be general in nature.

2) Testing

Pumping stations shall be tested as directed by the District using water. Each pump shall be tested through its operating range from shut off head to run out along with all control sequences and alarms.

1. GENERAL

1.1 Requirement

The RDN will require a “Subdivision Servicing Agreement” to be completed for any new sewer system or existing system extension, unless otherwise agreed to in writing by the RDN.

Sewage collection and conveyance systems shall be designed, installed, extended, tested and maintained in accordance with the following regulations and standards.

The sewer standards for design and construction of the sewer within the Lakes District and the Schooner Cove Community Sewer Standards Area are to be governed by Regional District of Nanaimo Land Use and Subdivision Bylaw No. 500, 1987, and particularly by this Schedule 4D1.

It is the intention of the RDN to enter into a phased development agreement under section 905.1 of the *Local Government Act* with the property owner of the lands within the Lakes District Comprehensive Development Zone CD44 and the Schooner Cove Comprehensive Development CD45 that will specify changes to specified subdivision servicing bylaw provisions that would not apply to the development contemplated under that agreement, unless agreed to in writing by the developer.

1.2 Design

The engineering design of the sewage collection and conveyance systems shall be carried out by, and the preparation of drawings and specifications shall be sealed by a Professional Civil Engineer registered in the Province of British Columbia, and shall conform to these Standards.

1.3 Definitions

ADWF means average Dry Weather Flow

AWWF means average Wet Weather Flow

B.O.D means quantity of oxygen utilized in the biochemical oxidation of organic matter under standard laboratory procedure in 5 days at 20°C expressed in mg/l.

Collection facility means A facility used for the collection and conveyance of sanitary sewage.

Comminuted Garbage means the wastes from the preparation, cooking and dispensing of food that have been shredded to such a degree that all particles will be carried freely under the flow conditions normally prevailing in public sewers, with no particle greater than 6mm in any dimension

Design Flow means peak sewage flow plus peak storm water infiltration.

Direct Service Area means land and improvements directly served by the proposed facility.

Engineer means the Manager of Engineering Services for the Regional District of Nanaimo, or the person designated by the General Manager of Regional and Community Utilities.

Engineer of Record means a Professional Engineer registered with the Association of Professional Engineers and Geoscientists of BC who is responsible for the construction drawings and documents. The Engineer of Record will be the

engineer that signs and seals the record drawings and the certification of installed works.

Facilities means sewers, sewage treatment and disposal plants, pumping stations and other works necessary thereto, and outlets for carrying off, treating and disposing of sewage, and includes any and all works, structures, lands, conveniences, incidental to and necessary for a sewerage system.

Garbage means solid wastes from domestic and commercial preparation cooking and dispensing of food, and from the handling, storage and sale of produce.

Industrial Waste means liquid waste from industrial manufacturing processes trade or business, as distinct from sanitary sewage.

Lateral Sewer means sewer serving more than a single subdivided parcel

LPCPD means litres per capita per day

l/s means litres per second

mg/l means milligrams per litre

MPa means megapascals (1000 kPa)

Member Municipality or Member means a municipality or improvement district within the Regional District of Nanaimo.

M³/ha means cubic metres per hectare

M³pd means cubic metres per day

PDWF means Peak Dry Weather Flow

pH means the logarithm of the reciprocal of the weight of hydrogen ions in grams per litre of solution

ppm means parts per million

Peaking Factor (PF) means the Ratio of peak dry weather flow to the average dry weather flow.

Regional District means in this document the Regional District shall refer to the Regional District of Nanaimo.

Sanitary Sewage means sewage having a quality substantially equal to that of normal domestic sewage

Sanitary Sewer means a sewer which carries sewage and to which storm, surface and ground water are not intentionally admitted

Service Connection means a sewer connection a subdivided lot to the lateral sewer

Sewage Treatment Plant means an arrangement of structures and devices used for treating sewage

Stormwater Infiltration means the infiltration of groundwater or inflow of stormwater through leaks and connections into the system

Suspended Solids means solids that either float on the surface of, or are in suspension in water, sewage or other liquids, and which are removable by laboratory filtering

Tributary Area means all land in the service area tributary to the proposed facility

1.4 Application

All applications shall be made in the following steps:

1. Feasibility Review

All proposed construction of sewage collection and conveyance facilities shall be submitted to the Regional District for a feasibility review prior to commencement of any detailed design or construction. Such requests shall include a plan of the proposed construction and the area it will serve. The applicable feasibility review fee, in accordance with RDN Bylaw No. 1259.03 or most recent amendment, and the Letter of Assurance shall also be submitted at this time.

The Regional District will review the proposal, and reply in writing indicating the District's decision regarding acceptance or rejection, and/or the necessary amendments required.

2. Detailed Design

The detailed design and specifications shall be submitted in duplicate to the Regional District for Design Stage Approval (DSA) prior to construction. Attached to the submission shall be a Certification of Design. The applicable engineering review fee, in accordance with RDN Bylaw No. 1259.03 or most recent amendment, shall also be submitted at this time, along with the Design Professional Engineer's certified cost estimate for the works upon which the fee amount is based. *The final determination of the DSA fee shall be determined upon completion of the project and final certification of the construction costs by the Design Professional.*

The detailed plans will be returned either approved or with a request for re-submission. Re-submission will be carried out until the Regional District approves the detailed plans and specifications, and issues Design Stage Approval (DSA).

The designer shall submit the RDN approved plans to the Provincial Ministry of Transportation & Infrastructure and Vancouver Island Health Authority for approval permits. Receipt and submission of these permits to the RDN shall also be a prerequisite to the start of construction. Approval permits from other applicable agencies as required shall also be obtained.

1.5 Drawings and Specifications

All design drawings shall be ISO A1 size, 594 mm in depth and 841 mm in width the following information shall be supplied

- 1. Location Plan** - showing the location of the proposed work. This may appear on the same sheet as the Key Plan.
- 2. Key Plan** - showing a plan of the proposed work at a suitable scale such that the whole works are shown on one drawing, usually 1:5000, 1:2000 or 1:1000. The Key Plan shall show a general outline of the works, area covered and sheet numbers of the plan/profile drawings, and a legend showing existing and proposed works.
- 3. Plans/Profiles** - showing detailed design of the proposed works.

Plans shall be drawn at a scale of 1:500 or 1:250, showing the location of the pipe centre line, pipe size and type and off-set from property line, manholes, services, trench details, trench dam details and all related appurtenances in relation to road, easement and adjacent property and lot lines. Existing or proposed underground utilities are to be indicated on the plan in addition to the

extent of work required in making connection to existing sewer main. Location of service connections are to be shown. Connections not conforming to the standard offset require a distance from an iron pin or lot line.

Profiles shall be drawn at a horizontal scale of 1:500 and a vertical scale of 1:50 if more suited to specific conditions. The profile shall show the line of the existing and finished road grade on centreline, the invert of the pipe, location of manholes, and location of storm and water utilities. Where vertical curves are used, the invert elevation shall be shown at the beginning and end of the curves.

4. **Specifications** - shall be prepared to further define materials of construction and shall specify methods of construction and workmanship.
5. **Record Drawings** - shall be prepared by correcting drawings on completion of construction in order to reflect "record drawing" conditions for permanent records. The location of all individual lot sewer service connections shall be clearly shown with distance from the nearest manhole to the service wye. The drawings shall be signed and sealed by the Professional Civil Engineer, and shall be accompanied by a Certification of Installed Works. Final record drawings shall consist of:
 - (a) Two (2) full-size paper sets;
 - (b) One (1) full size 3 mil Mylar set;
 - (c) 2 – 11" X 17" paper sets or 2 A3 half-size paper sets, as agreed by the RDN; and
 - (d) Digital copies: one (1) as AutoCAD or Civil 3D file as applicable to the current software, and one (1) as TIFF files.

1.6 Variations from Standards

Where the applicant wishes to vary from these standards he shall submit a written request with adequate supporting data to the Regional District for review. The Regional District shall make the final decision in writing as to the standard requirements which shall apply.

1.7 Permits

The applicant shall be responsible for obtaining all necessary approvals and permits required prior to commencing construction of the sewer system.

1.8 New Service Areas

Where a sewer system is to be constructed by an applicant within an area previously unserved by a community sewer system, the design and construction for the system shall comply with the requirements of these standards, unless otherwise agreed to in writing by the Regional District.

1.9 Existing Service Areas

Where a sewer system is to be constructed by an applicant within the existing or extended boundaries of an area already being served by a community sewer system, the design and construction of the system shall comply with the requirements of these standards.

1.10 Inspection

The Manager of Engineering Services of the Regional District or his appointed deputies shall be allowed access and provided adequate facilities for access to any part of the works at all times for the purpose of inspection.

Any connections to or interruption of any existing system will only be permitted be under the direct supervision of the Regional District. Adequate notice to the Regional District of any such interruption to service shall be provided in order that attendance by Regional District personnel can be arranged.

Any connections to or interruption of any existing system will be under the direct supervision of the Regional District. Adequate notice to the Regional District of any such interruption to service shall be provided in order that attendance by Regional District personnel can be arranged.

2 DESIGN

2.1 Sewage Flows

Sanitary sewer systems shall be designed using the following formula to accommodate peak sewage flows and peak inflow & infiltration.

$$AWWF=PDWF +I\&I$$

Storm water connections shall not be made to the sanitary sewer system.

2.2 Design Population

Design contributory populations shall be calculated in accordance with the Regional District of Nanaimo’s population predictions or with the ultimate planned development in the tributary area, whichever is greater. The following densities shall be used for housing types listed below:

Housing Unit	Persons per unit	Notes
Single Family / detached house	2.2	Based on 2011 census for Nanoose: 5674 persons / 2,587 housing units. Nanoose is predominately single family (>90% of dwellings)
Townhouse (attached, semi-detached) unit	1.9	Based on 2011 census for City of Nanaimo, City of Victoria
Apartment / condominium unit	1.4	Based on 2011 census for City of Nanaimo, City of Victoria
Secondary suite (carriage house)	1.1	50% of single family, consistent with draft zoning bylaw
Seniors living unit	1.1	Per CWPC Senior’s Housing Group

Where units are not known the following should be used:

.1	Dwelling unit	30 pph
----	---------------	--------

.2	Multi dwelling unit development	125 pph
.3	Commercial Equivalent of	50 pph
.4	Industrial Equivalent of	50 pph
.5	Institutional	50 pph

pph = persons per hectare

2.3 Sewage Flow Calculation

Average dry weather flow (ADWF) shall be established by multiplying the design population by an average daily sewage flow of 300 Litres per capita per day.

Peak dry weather flow (PDWF) shall be established by multiplying the ADWF by the peaking factor (PF) which obtained from the following formula.

$$PF=6.75*Population^{-0.11}$$

Peak dry weather flow can also be obtained using the graph contained in the standard drawing S-21.

For new developments, where water conservation measures are mandatory (such as low flow toilets), the sewage flow may be reduced by 10% from that obtained from this table.

Design sewage flows may be varied by the Regional District, where suitable metered flow record is available, or for developments utilizing wastewater (grey water) re-use onsite.

Peak inflow and infiltration (I&I) shall be calculated using:

- .1 12 m³/ha for Existing development areas
- .2 10 m³/ha for New development areas
- .3 The peak inflow and infiltration may be varied by the Regional District where suitable metered records for design storm events of maximum infiltration period of the year are available.

Design sewage rates of flow shall be computed by adding peak sewage flow to peak inflow and infiltration design allowances.

Sanitary sewage design calculations shall be prepared and submitted on a drawing showing the sanitary sewer tributary area as part of the detailed design drawings. If the sanitary sewer calculations are completed using modeling software the results of the software shall be displayed on the detailed design drawings. Use of modeling software shall be approved by the Regional District.

2.4 Sewage Characteristics

1. Sewage quality criteria shall be as follows:

Sewage Quantity (ADWF) in the Direct Service Area	Constituent	Average Normal
<50m ³ /day	BOD -5 day 20° C Suspended Solids pH Temperature	1000mg/l 800mg/l 4-10.5 79° C
50m ³ /day to 450 m ³ /day	BOD -5 day 20° C Suspended Solids pH Temperature	400mg/l 300mg/l 5-9.5 66° C
>450 m ³ /day	BOD -5 day 20° C Suspended Solids pH Temperature	200mg/l 200mg/l 5.5-9.0 54° C

2. Regulations governing the quality of wastes acceptable for admission to The Regional District of Nanaimo shall be followed and can be found in Bylaw 1225.
3. Where the existing industrial and/or commercial developments will be connected to the sewer system, the District may require that flow sampling be carried out to determine the design loadings; re-treatment of wastewater prior to discharge to the Regional District's facilities may be required.

2.5 Hydraulics

1. All facilities shall be designed to convey peak sewage flow plus peak I&I calculated as set out in section 2.3 sewage flow calculation.
2. Sewers shall be designed to carry the calculated design flow at a minimum velocity of 0.6 m/s.
3. When carrying design flow the maximum pipe depth of flow shall not exceed the following:

(a) <250mm	¾ pipe diameter
(b) 300mm to 450mm	¾ pipe diameter
(c) >500mm	Full pipe diameter
4. Service connections shall be designed with a minimum velocity of 0.9m/s.
5. Forcemains shall be designed with a minimum velocity of 0.6m/s.
6. Manning's Roughness Coefficient of 0.013 shall be used for design sewers and service connections. Manning's Roughness Coefficient of 0.015 shall be used for forcemains and outfalls.
7. Manholes shall be designed to incorporate a minimum elevation differential of 30mm wherever a horizontal deflection exceeding 45 degrees occurs and 5mm where it is straight run. These elevation differentials are in addition to the normal grade of the lateral sewer.
8. Pumping stations and treatment disposal works shall be designed to process peak sewage flow plus peak I&I calculated as set out in section sewage flows section of these standards. Bypassing of works to disposal shall not be allowed except under emergency conditions.

2.6 Piping

1. Lateral Sewers

No lateral sewer shall be less than 200mm in diameter, unless the sewer is the final section of a lateral that cannot be extended, in that case, under the approval of the RDN a pipe 150mm in diameter may be used providing that it meets the hydraulic needs of the sanitary sewer.

2. Service connections

Service connections shall be minimum 100mm in diameter. Service connections serving more than one dwelling unit shall be minimum 150mm in diameter or sized in accordance with design flows and available grades.

No service connection shall exceed 15m in length measured horizontally between the lateral sewer and the property line without the approval of the Regional District. If a service greater than 15m is approved by the Regional District, a cleanout facility must be provided as shown on the standard detail drawing for service connection.

Water service and sewer services in a common trench shall be in accordance with the requirements of the Vancouver Island Health Authority.

3. Depths

Depths of all sewers shall be such that all basements in the area the sewer is intended to serve can be drained by gravity. Lift stations from individual homes will be acceptable as depicted generally in the Lakes District Infrastructure Phasing Drawing appended to this addendum. There may be other areas that will be serviced by individual lift stations subject to the Approval of the RDN.

Minimum cover on services shall be 0.75m.

Where minimum cover cannot be provided, an explanation of the reasons shall be submitted to the RDN with the proposed method of protecting the pipe.

Excessively deep service inspection assemblies should be avoided. Where standpipes are more than 1.8m in depth, the standpipes shall be constructed in two or more sections, each having a length not exceeding 1.8m.

4. Curved Sewers

Wherever possible, curved alignment shall be avoided.

Horizontal curves may be permitted where the configuration of the right of way permits curvature at a constant offset, where the velocity in the pipe exceeds 1m/s and where grades of 1% or greater are available. Tracer wire is required on all sewers with horizontal curves.

Vertical curves may be permitted where excessive depths or rock cuts are to be avoided or energy dissipation is needed.

Radius of curvature for PVC sewers to 250mm diameter shall be uniform throughout the curves by bending pipe barrel plus joint deflection to 2 degrees maximum and shall not be less than 60m or the manufacturer's minimum pipe radius, whichever provides a greater radius of curvature. PVC pipes 300mm diameter shall be deflected only at pipe joints to 2.5 degrees maximum, and 350mm diameter and larger pipes at pipe joints to 1.5 degree maximum. Miter bends are not to be used unless approved by the RDN.

Horizontal curves will be permitted for the gravity sewer along the eastern side of Enos Lake and in the park areas where sewers are approved. Curves radii are to be at or larger than manufacturers specifications. Vertical grades are to be chosen such that velocities must be equal to or exceed 1m/s (for max day flows at full build out).

Compound horizontal curves are not permitted between manholes.

Horizontal and vertical may be permitted in the same run.

Concrete pipe shall not be curved horizontally or vertically.

5. Manholes

In general the distance between manholes shall not exceed 150m, unless approved by the RDN. If approved by the RDN the maximum distance between manholes may be increased to 250m.

Manholes shall be located at grade and alignment changes, at lateral size changes, at the upstream end of all lateral sewers, at the junctions of all lateral, at regular spacing not exceeding the maximum allowable, sewers and at service connections larger than 150mm in size.

Cleanouts may be substituted for manholes at the upstream end of lateral sewers where no further extension of the sewer main is anticipated.

Where the difference between the incoming and outgoing invert exceeds 600mm, a drop manhole shall be used. See the standard detail drawings for drop manhole details. Differences between 150mm and 600mm should be avoided. Inside drop manholes with a minimum barrel size of 1200mm as shown in drawing the standard detail drawings, may be permitted for new construction of drops between 900mm and 2000mm and upon the approval of the RDN.

Manholes shall be constructed in a manner that prevents water from infiltrating into the manhole.

Where cast in place manholes are proposed, an explanation of the reasons shall be submitted to the RDN with the proposed design and construction method. Only ready mix concrete, 20 Mpa at 28 days shall be used.

Manholes shall be located so that the manhole covers are not located in the wheel paths of vehicles, in gutter lines, curbs or sidewalks.

Manholes located in untraveled areas shall have a 1m asphalt apron which slopes away from the manhole rims at 2%.

A watertight manhole frame and cover shall be required for all sewer manholes located in areas which flooding can occur.

Precast manhole bases shall be sized according to the following table

Pipe Size (mm) (Nominal)	Depth of Manhole (m) (Top of Cover to Inv.)	Barrel Size (mm) (Inside Diameter)
150-375	0 - 5.9	1050
150-375	6-9	1200
150-600	9 or deeper	1500
400-600	0-8.9	1200
675 – 1050	All depths	1500

6. Manhole Platforms

Manhole platforms are generally not required. Design of manholes shall consider use of appropriate safety equipment.

A cage, well or ladder safety device shall be provided where the length of climb is greater than 6 metres.

If platforms are necessary, ladders shall meet the following requirements:

- (a) The ladder shall consist of multiple sections.
- (b) Each section shall be horizontally offset from adjacent sections.
- (c) A landing platform shall be provided within the length of climb.
- (d) Refer to the Standard Drawings for manhole platform details.

7. Location of Sewers

Wherever possible, sewers shall be located on the high side of the street where only the high side is served by the lateral and on the low side of the street where both sides are served by the lateral. Wherever possible the sewer shall be located on the opposite side from the watermain and at a constant offset from the property line or paved roadway.

Sanitary lateral sewers shall be located at least 3.0m horizontally and 0.45m vertically from water pipes unless approved by the Vancouver Island Health Authority and all joints are suitably coated and wrapped.

Sanitary sewer mains may be installed in a common trench with storm sewers provided the minimum outside pipe separation is 300mm.

8. Utilities in Private Lands

The design of utilities shall avoid crossing private lands as much as possible.

Utilities crossing private lands shall generally be offset a minimum 1.5 metres from the property boundary unless otherwise approved by the Regional District.

Appurtenances such as manholes, valves ect. shall not be located on property boundaries.

Utilities shall not cross private lands in such a manner that they render the property unusable and generally be located beyond the normal building envelope allowed by zoning. Special considerations must be given to ensure the location of the utility crossing minimizes the limitation on the future use of the property.

The minimum width of the right of way shall be 3m for single pipes and 4.5m for two pipes installed in a common trench.

9. Siphons

Where a siphon (i.e. inverted sewer, depressed sewer) is required to carry flow under an obstruction such as a stream, the following criteria shall be applied to the design:

- (a) All siphons shall be multiple pipe structures.
- (b) A cleansing velocity of 0.6 to 0.9 m/s shall be reached at least once a day in the primary pipe even during the first years of operation.
- (c) The total system shall be sized to accommodate the ultimate design peak flow.
- (d) A 1200mm diameter manhole shall be provided on both ends of the siphon.
- (e) Each manhole on the siphon shall be provided on both ends of the siphon.
- (f) There shall be no high points in the siphon between manholes.
- (g) There shall be no acute bends in the siphon.
- (h) There shall be no change of pipe diameter between manholes.
- (i) The primary pipe shall be minimum 200mm in diameter wherever possible.
- (j) All siphons shall have a separate debris sump manhole upstream of the siphon. The debris sump shall be designed to allow easy access for maintenance and cleaning and shall be suitably vented.

2.7 Pumping Stations

This section applies to all municipal owned and operated sanitary sewer pumping stations. Properties serviced by individual sewer pumps shall be connected to the municipal sewer system by a gravity service connection from the property line to the municipal sewer system.

This section is intended as a guide for general requirements for a pumping station. All pumping station designs shall be developed using good engineering practice with the input of the Regional District of Nanaimo.

Sanitary sewer pump stations shall only be permitted at locations where gravity connections from an existing or proposed trunk sewer cannot be provided.

1. General Design Criteria

Pump station size and configuration shall accommodate ultimate sewage flows.

Pumping stations shall be designed and constructed using materials recognized for quality in the sanitary sewer industry.

Pumping stations shall be fully automatic in normal operation, and fully compatible with the Regional District of Nanaimo's telemetry system. Specifics of SCADA systems shall be coordinated with the Regional District of Nanaimo during the pre-design stage.

All stations shall have a wet well capacity providing not more than 12 hours of storage at minimum design flows and a frequency of pump start –up of not less than 5 minutes at peak flows.

No overflow of sewage shall be permitted. Pumping stations shall have emergency backup systems to prevent sewage overflows during a mechanical or electrical failure.

4 complete (3 paper and 1 digital) sets of operational instructions, maintenance manuals, emergency procedures, parts lists, as-built engineering drawings, shall be submitted to the Regional District of Nanaimo upon completion of the pump station.

Current and future service requirements shall be evaluated with the electrical and phone utility companies.

Buildings shall have gutters on all four sides of the roof.

Pump station buildings shall be BC Hydro green in colour.

2. Pumps and Equipment

As a minimum, pumping stations shall be equipped with alternating duplex pumping units. One pump shall be equipped with a flush valve.

Duplex pump arrangements shall be designed for each pump providing 100 percent standby at peak flow.

Individual pump motors shall be equipped with hour meters and pump run indicator lights.

All pumping units to be grinder or vortex pumps capable of handling a 75mm solid, without clogging.

All piping and valves shall have a minimum of 100mm diameter.

Minimum pump run time shall not be less than 2.5 minutes or as recommended by pump manufacturer; whichever is greater.

Each sewer pump shall be provided with its own individual pipe connection to the wet well.

A concentric increaser shall be provided on the pump discharge followed by a check and gate valve.

Check valves on discharge lines shall be ball type.

The desirable velocity at the discharge point at maximum pump discharge is from 1.8 to 2.5 metres per second.

3. Controls

Stations shall be equipped with high and low level alarm, security alarm, power fail alarm and general alarm (for motor overload, temperature, and moisture alarms if so equipped.) Also, a level transducer probe and data logger, suitable to the Regional District, shall be installed in the wet well.

Manual operation of all pumps by push-button control shall be possible for checking the operation and for drawing down the wet well. Manual operation shall bypass the low water cutout but not the low water alarm.

Wiring for the control panel shall be underground from the hydro pole to the control panel kiosk.

Alarms shall have audio & visual alerts at the pumpstation.

Stations with submersible pumps shall have the motor starters and controls located in a factory assembled free-standing unit control centre located at ground level on a concrete pad.

Stations with non-submersible pumps, shall have the pump motors and controls located in a ventilated, heated, lighted and dehumidified area.

Name plates, approved by the Regional District, shall be supplied on the pump's control enclosure components and other operating components to indicate to the operator the purpose of the component or the operating routine applying to the component.

An isolation switch for each pump shall be located within sight of a service man working inside. Switches shall function by breaking the pump control circuit, thereby isolating the main power at the control panel.

Relays are to be used in conjunction with level controls.

An electrical panel heater and thermostat shall be installed inside all control panels.

The control panel kiosk shall be aluminum.

The control panel shall include an extra 110 volt, 10 amp, duplex receptacle, complete with cover, for operation of small electric tools. It shall be separately fused within the control panel.

4. Standby Power

The onsite provision of a standby power generator will be decided on a site specific basis by the Regional District . If the Regional District decides that permanent standby power facilities are not needed for the specific pump station, the pump station shall be equipped with a generator receptacle matching the Regional District style.

5. Pumping Station Chamber

The control panel and non-submersible pump motors shall be located in one above-ground enclosure unless otherwise approved by the Regional District.

The below grade chamber shall be reinforced concrete construction or as approved by the Regional District.

Concrete pump chambers shall have a 1 to 1 slope benching around the base perimeter.

Exterior concrete walls shall be tar-coated to prevent leakage.

The chamber above grade shall be designed to harmonize with the surroundings, shall be of fireproof construction and have no windows.

Chamber access shall be in accordance with the latest WorkSafe BC Regulations.

Equipment guards and rails for floor openings shall be provided.

Independent mechanical ventilation shall be provided by explosion proof exhaust fans for the dry and wet chambers where applicable. If the ventilation system is intermittent rather than continuous, the electrical switches shall be interconnected with the station lighting system. Ventilation interconnected with the station lighting system shall have sufficient capacity to exchange the total volume of air inside the station with fresh air within 3 minutes. All vents lines shall have screened openings to prevent the entrance of rock or other foreign matter. Air flow in fans shall be fresh air to wet well with second vent out for discharge.

Dry well stations shall include a sump and sump pump for the interior of the dry well with discharge above the top water line in the wet well.

The entrance to the station shall be waterproof and supplied with a lockable door complete with security alarm.

Where the entire station is underground, the entrance shall not be more than one metre above the surrounding finished grade.

6. Sitework and Lighting

A 25mm water service connection, complete with an approved backflow prevention device, shall be provided in the station designed in accordance with the AWWA Cross-Connection Control Manual.

The pumping station and appurtenances shall be within a porous paved surface or approved gravel which provides for the turning movements. A minimum turning grade of 12.8 metres, shall be used to determine turning movements. A minimum of 3.65 metres in width is required for access to all equipment. Approved landscape screening shall be provided.

Storm drainage from the site shall be self-contained.

Adequate protection shall be provided to prevent vandalism and vehicular damage and to protect public safety. Requirements may include fencing, non-mountable curbs and/or traffic bollards.

High pressure sodium, dark sky compliant, lighting shall be provided unless otherwise approved by the Regional District. Backup lighting connected to the standby power supply shall be provided in case of a power failure.

7. Forcemains

All forcemains shall be designed so that the minimum velocity is 0.6m/s and a detention time not exceeding 12 hours during ADWF.

Forcemains shall be designed without high points unless otherwise approved by the RDN. If approved, an air-relief valve shall be provided at high points in the line, meeting RDN requirements.

Thrust blocks shall be provided at all bends as required.

Cleanouts (blowdowns) shall be supplied at all low points of force main.

Flushouts shall be located at the terminus end of all pressure sewer mains leading to manholes or pump stations.

3. CONSTRUCTION

3.1. General

1. Access Roads

Temporary roads shall be constructed as required for access to the working areas. Adequate drainage facilities in the form of ditches, culverts, or other conduits shall be installed as found necessary to maintain these roads. In the construction of access roads, existing drainage facilities, natural or otherwise, shall not be disturbed to the detriment of properties outside the working area and such facilities shall, unless otherwise provided elsewhere in the specifications, be restored to their original condition on completion of the work.

2. Sanitary Facilities

Clean, sanitary latrine accommodations shall be provided and shall be located and maintained in accordance with the regulations of VIHA.

3. Special Tools, Operating Manuals, Shop Drawings

With each piece of mechanical and electrical equipment or machinery having wearing parts and requiring periodical repair and adjustment, all special tools, wrenches, and accessories required for removing worn part, making adjustments, and carrying out maintenance shall be supplied. All gauges, indicators, and lubricating devices necessary for the proper operation of the equipment shall be furnished.

With each piece of equipment, 4 sets of operating manuals and as-constructed shop drawings shall be supplied. The manuals shall provide the manufacturer's recommended maintenance schedules with the grades of lubricants required, and instructions as to how the equipment may be taken apart for periodical inspection and replacement.

4. Blasting

Blasting will be permitted only after securing the approval of the applicable authorities. Blasting will not be carried out without first verifying that insurance covers any loss of life or damage that may result from this work. The Regional District, in granting approval for blasting, does not in any way assume responsibility for injury, loss of life, or damage that result there from, and such approval shall not be construed as approval of the methods employed in blasting, the sole responsibility therefore being that of the applicant.

5. Site Maintenance and Clean Up

The working area shall be maintained in an orderly manner and shall not be encumbered with equipment, materials, or debris.

Clean up shall be a continuing process from the start of the work to final acceptance of the project. Property on which work is in progress shall at all times be kept free from accumulations of waste materials or rubbish. Accumulations of waste materials, which might constitute a fire hazard, shall not be permitted. Spillage from hauling vehicles on traveled public or private roads shall be promptly cleaned up. On completion of construction, all temporary structures, rubbish, and waste materials resulting from the operations, shall be removed.

6. Erosion and Sediment Control

An Erosion and Sediment Control Plan shall be submitted for review and approval seven days prior to the pre-construction meeting. The Erosion and Sediment Control Plan shall describe the proposed methodology to minimize potential impact on the surrounding environment. The Erosion and Sediment Control Plan shall indicate how the Contractor plans to control sediment discharges from the project and what measures will be put in place to prevent damage to aquatic habitat located downstream.

The work shall be carried in compliance with the submitted and approved Erosion and Sediment Control Plan and all other environmental laws affecting the work and with the recommendations contained in the most recent edition of the "Land and Development guidelines for the Protection of Aquatic Habitat" published jointly by the Ministry of Land, Water, and Air Protection and Fisheries and Oceans Canada.

For the erosion and sediment control plan, 'environmental laws' means all statutes, regulations, orders, and bylaws relating in any way to the natural environment or its ecosystems, public or occupational health, transportation, storage or handling of contaminants or hazardous materials.

3.2 Existing Structures and Utility Works

1. Scope

Existing structures shall be interpreted as being all existing pipes, ducts, ditches, or other works forming a part of sewerage, drainage, water, telephone, electrical, gas, or other utility system, as well as sidewalks, curbs, poles, fences, buildings, and other man-made things that may be encountered during construction.

2. Material Supply

Unless otherwise specified, materials supplied for replacement of existing structures shall be at least equal to those being replaced.

3. Location of Structures

Drawings or descriptions, verbal or otherwise, of existing structures or their location that are supplied by the Regional District are intended only as an aid to locating these structures. Measurements and location of the existing underground structures shown on the drawings are not guaranteed to be accurate, and must be verified prior to proceeding with construction.

4. Protection of Structures

Unless authorization from the Regional District is received for their removal, underground and surface structures encountered during construction shall be protected from damage. In the event of damage resulting from the construction operation, structures shall be repaired or replaced to a condition, which is at least the equivalent of that which existed prior to construction.

5. Emergency Situations

In emergency situations resulting from the construction operation, where life or property are endangered, the applicant shall immediately take whatever action is possible to eliminate the danger, and shall also notify the Regional District of the situation.

6. Access Maintained

Existing hydrants, valves or control pit covers, valve boxes, curb stop boxes, fire or police call boxes, and all other utility controls, warning systems, and appurtenances thereof shall not be made inaccessible at any time by the construction work. Bridges, walks, or other temporary facilities shall be provided as may be necessary to ensure that these controls or warning systems are free for use in their normal manner at all times during construction.

7. Curtailment of Utility Service

Where existing utilities such as water, sewer, electricity, telephone, and gas are serving the public, work shall be planned and executed such that there is no curtailment of service provided by these utilities without prior receipt of approval of the authorities responsible for provision and maintenance of these utilities. The applicant shall obtain the above approvals from the recognized authorities controlling these utilities. If approval for such disruption of utility service is not granted, it may be possible to establish temporary facilities to provide continuous utility service during the course of construction. Such temporary facilities shall only be implemented after receiving the approval of the utility authority.

If approval is received to temporarily shut off an existing utility, individual users of the utility shall be notified at least one hour prior to the time of shut-off.

8. Support of Structures

Existing structures shall be protected against damage from settlement by means of timber support or compaction of backfill as required. Where necessary, timber support shall remain in place following backfill of excavations.

Backfill which is placed under or adjacent to the existing structures, which have been undermined during excavation, shall be compacted in a manner which will

prevent damage of the structure from settlement. Such backfill shall be of approved granular material suitable for compaction.

On existing piping, this material shall extend horizontally a minimum distance of 600 mm on both sides of the pipe at a level 300 mm above the pipe, and shall slope down from this point at 1-1/2 horizontal to 1 vertical to meet the bottom of the excavation.

9. Drainage Facilities

Existing culverts, enclosed drains, flumes and ditches, and other drainage structures affected by the work but left in place shall be kept clear of excavated material at all times during construction. When it is necessary to temporarily remove an existing drainage structure, suitable temporary ditches or other approved means of handling the drainage shall be provided during construction.

3.3 Clearing

Prior to clearing, the exact limits of the areas on which clearing may take place and whether or not there are restrictions placed on clearing which would result in leaving certain trees, structures, or other existing items in place shall be ascertained.

Prior to trenching, the right-of-way shall be cleared of all standing or fallen brush, timber, stumps, or other debris, which may obstruct the construction operation, damage the completed installation, or detract from the appearance of the site on completion of construction. This material shall be burned or otherwise disposed of to the satisfaction of the Regional District.

The restrictions of all authorities established to control burning in the area shall be complied with. If burning cannot be done on the clearing site, the material shall be hauled to an approved location for burning or disposal. Burning permits, as required, shall be obtained by the applicant.

3.4 Trench Alignment and Depth

Following clearing and prior to excavation of the trench, the location at which the pipe shall be installed shall be established by setting appropriate survey control. As a minimum this shall include marking of the manholes and any horizontal or vertical curves in the pipe, with suitable elevation data provided. A laser should typically be used to maintain grade during pipelaying, and for all grades of 2% or less.

Where pipe is to be installed to a predetermined grade, a cut sheet will be provided showing the depth of the pipe invert relative to the grade stake elevation at the respective locations along the pipeline.

The trench shall be excavated so that pipe can be laid to the established alignment and depth, with allowance made for specified trench wall clearances and bedding as shown in the standard drawings of this Schedule for various conditions, or otherwise required.

All trenching and excavations shall be carried out in the manner recommended by the Workers' Compensation Board of British Columbia, or as may be necessary to protect life, property, and structures adjacent to the work and the work itself.

3.5 Trench Backfill

Trench backfill shall be carried out as shown in the standard drawings of this Schedule for various conditions.

3.6 Pipe Bedding

1. Granular material for pipe bedding within the pipe zone shall be sand or clean gravel or crushed rock, evenly graded from coarse to fine, and conforming the following specifications and gradations limits:
2. The standard trench section is shown in the standard drawings of this Schedule for various conditions. The nominal minimum depth of cover shall be 1.5 m in traveled areas and 1.0 m in untraveled areas unless otherwise permitted by the Regional District. Water mains shall be located not less than 3 m centre-to-centre from all sanitary lines, unless otherwise permitted by the Regional District and the Vancouver Island Health Authority.
3. Bedding material shall conform to the following gradation limits:

Gradation Limits
(Percent by Weight Passing)

Sieve Designation Type 1 Type 2

19.0 mm	100	90-100
12.5 mm		65-85
9.5 mm	85-100	50-75
4.750 mm	70-100	25-50
2.36 mm		10-35
1.18 mm	20-65	
0.850 mm		5-20
0.6 mm	0-45	
0.425 mm		0-15
0.18 mm		0-8
0.15 mm	0-10	
0.075 mm	0-5	0-5

4. Type 1 is the standard acceptable bedding material. Type 2 shall be used where specified by the design engineer to meet special design loading. Dry sieve analysis shall be carried out in checking material gradation.
5. Other acceptable bedding materials, for use only where shown on the construction drawings or as approved by the Engineer, are drain rock, pea gravel or native material. In rock, pipe zone shall have filter fabric between rock and bedding material. Filter fabric shall be non-woven, minimum grade Armtex 200 or equivalent.
6. The bedding material shall cover the full width of the trench bottom and have a minimum depth of 100 mm on completion of compaction. In rock excavation the minimum depth of bedding below the pipe shall be 150 mm after completion of compaction.
7. Bedding material shall be compacted in maximum 150 mm lifts to 95% of Modified Proctor Density (ASTM D1557). Side tamping shall be carried out with bedding material placed to the pipe springline, to provide haunch support.

8. Bedding material shall be placed in such a manner that the pipe is evenly supported throughout its length by the pipe bedding material.
9. Placement and compaction of the bedding material shall not damage or displace the pipe.
10. Bedding material shall be leveled across the full width of the trench to an elevation of 300 mm above the crown of the pipe.

3.7 Repairs

Any system approved and built to these standards which requires maintenance work, shall be repaired with materials and construction methods conforming to the specifications contained herein.

3.8 Pipes and Fittings

The size and type of the pipe to be used are to be shown on the design drawings.

Only the pipe types listed in this section shall be used for lateral sanitary sewers or services.

Pipe shall be installed in strict accordance with all of the manufacturer's recommended practice.

All products used shall conform to the Regional District of Nanaimo's Approved Product List.

1. Polyvinyl Chloride (PVC) Pipe, Lateral Sewers

- (a) PVC pipe shall be DR 35.
- (b) Pipe and fittings shall be manufactured to the following standards:
 - 100mm to 375mm ASTM D3034 and CSA B182.2
 - 450mm to 675mm ASTM F679 and CSA B182.2
- (c) All PVC sanitary gravity main pipes should be green in colour.
- (d) Sanitary sewer main pipe, fittings and service connections shall be joined with a rubber gasket or other preformed, factory manufactured gasket or approved material designed for use with the specified pipe. Solvent connected joints and fittings will not be permitted.

2. Polyvinyl Chloride (PVC) Pipe, Service Pipes & Fittings

- (a) PVC pipe of 100 mm pipe diameter shall be DR 28.
- (b) Services larger than 100mm shall be as specified the same as lateral sewers.
- (c) All sanitary services 100mm in diameter shall be white.
- (d) Service connections to be PVC mainline pipe shall be made with PVC fittings manufactured to ASTM D3034, CSA 182.1 and CSA 182.2.
- (e) The use of saddles instead of manufactured wye fittings shall require approval of the RDN.

3. Polyvinyl Chloride (PVC) Pipe, Pressure Pipe

- (a) Pipe shall be white in colour.
- (b) Pipe and fittings shall be manufactured to the following standards:
 - 100mm to 300mm AWWA C900 and CSA B137.3
 - 350mm to 900mm AWWA C905 and CSA B137.3
- (c) Pipe shall be compatible with mechanical and push-on joint fittings and valves without the use of special adapters.
- (d) Pipe shall include push-on integrally thickened bell and spigot type joints conforming to ASTM D313.9 with single elastomeric gasket conforming to ASTM F477.

4. High Density Polyethylene (HDPE) Pipe (Smooth Profile)

- (a) Pipe shall conform to CGSB 41-GP-25M. Pipe material shall conform to ASTM D1248 Type III, Class C, Category 5, Grade PE 35-10
- (b) Minimum Acceptable pipe class shall be DR 26 with a hydrostatic design stress of 10MPa.
- (c) HDPE pipe used for pressurised applications shall be a minimum pipe class of DR21.
- (d) All pipe shall bear the pipe series designation and manufacturers name.
- (e) Fittings for HDPE, if required, shall be detailed and manufactured by the pipe manufacturer. Mitre bends shall be fibreglass reinforced. Fittings shall have a pressure rating at least equal to that of the pipe it is being joined.
- (f) Pipe may be deflected up to the manufacturer's recommended minimum radius. Deflected pipe may be used instead of manufactured or mitred bends.
- (g) Joints shall be by thermal butt-fusion and constructed in accordance with the manufacturers specifications.
- (h) Flange joints shall be used to join long sections of butt joined pipe or as shown on the design drawings.
- (i) Flanges for HDPE pipe shall be slip-on type installed in conjunction with stub ends supplied by the pipe manufacturer. The flanges shall be class 150 meeting ANSI B16.5 drilling dimensions. Flanges shall be carbon steel.
- (j) All flanged joints shall be separated by a neoprene gasket bonded to one of the flange faces. Neoprene for flange gaskets shall be 3mm thick with holes drilled for flange bolts and size equal to flange diameter.
- (k) Bolts and nuts for flanges shall be hot dipped galvanized.
- (l) HDPE pipe shall only be used where approved by the RDN.

5. Concrete Pipes

- (a) Concrete pipe should only be used for sewer mains larger than 450mm in diameter.
- (b) Concrete pipe should be reinforced, ASTM C 76 Specification.
- (c) Lifting holes in concrete pipe shall be plugged with prefabricated plugs in non-shrink grout or other plugs recommended by the pipe manufacturer.
- (d) Concrete pipes shall have every joint grouted.
- (e) Testing for concrete pipes shall be carried out hydraulically. Air testing will not be permitted.

6. Ductile Iron Pipes (DI)

- (a) Ductile iron pipe may be used with the specific approval of the Regional District.
- (b) Soil corrosion survey will be required, and suitable corrosion protection measures installed.
- (c) Testing for ductile iron pipes shall be carried out hydraulically. Air testing will not be permitted.

3.9 Manholes

1. Manhole Sections

- (a) Unless otherwise approved, all manhole sections shall be precast reinforced concrete in accordance with ASTM C478.
- (b) All precast sections shall be complete with ladder rungs as the manhole steps section listed below.
- (c) O-ring rubber gaskets shall be placed between Manhole sections. The O-ring rubber gaskets shall conform to ASTM C443.
- (d) The inside surface of the precast barrel at the O-ring joints shall be filled with cement grout to a smooth finish.
- (e) Precast manhole barrel sections shall be placed plumb.

2. Manhole Bases

- (a) All manhole bases are to be precast unless otherwise approved.
- (b) Manholes bases shall be constructed so that the first section of a precast base can be set plumb with a uniform bearing pressure throughout its circumference.
- (c) Precast manhole bases shall be placed on 150mm thick base of 40mm drain rock.
- (d) Precast manholes and Cast-in-place manhole bases shall conform to the applicable standard drawings.
- (e) Cast in place manholes or connections to existing manholes shall utilize a rubber adaptor ring to seal the connection.

- (f) If the material at the bottom of the trench is unsuitable for support, the bottom shall be over excavated to a firm base, and backfilled with **base gravel and thoroughly compacted**.

3. Manhole Tops

Manhole tops shall be flat slab, precast concrete. Tops shall be reinforced to meet H20 loading conditions. Precast tops shall conform to ASTM C478 with approved offset opening for frame and cover.

4. Manhole Covers and Frames

- (a) Covers and frames shall be cast iron and certified to meet H20 loading requirements.
- (b) Covers and frames shall conform to the standard drawings.
- (c) Covers shall have “RDN SANITARY SEWER” permanently embossed on the cover.
- (d) Utility chamber manhole frame and cover shall conform to the standard drawings.
- (e) A watertight manhole frame and cover, if required shall conform to the standard drawings.

- (f) Covers located in statutory rights-of-way shall be permanently embossed with the additional wording “DO NOT COVER”.
- (g) Frames shall be set on precast concrete grade rings to bring the cast iron manhole frame to grade as shown on the drawings.
- (h) In unpaved areas, covers shall have a 1m circular 50mm thick asphalt apron sloping away from the manhole cover at a minimum grade of 2%.
- (i) In paved areas covers shall not protrude above the finished pavement.
- (j) In streets manhole covers shall not be placed in the wheel paths of vehicles.

5. Manhole Steps

- (a) Steps shall conform to ASTM C478 for manhole steps, they shall be 19mm either hot dipped galvanized cold rolled steel or aluminum alloy.
- (b) All steps shall be complete with approved polyethylene anchor insulating sleeves and installed in 25mm to 26 mm precast drilled holes in a manhole section.
- (c) Distance between manholes steps shall be maximum 400 mm, with the first manhole step being a maximum 500mm from top of the manhole. Manhole steps shall conform with the most up to date Worksafe BC's standard *G13.2(1)(b) Ladders in manholes*.
- (d) Manhole steps shall be installed 75mm into the manhole section wall.

6. Manhole Platforms

- (a) Manhole platforms are generally not required. Design of manholes shall consider use of appropriate safety equipment.
- (b) A cage, well or ladder safety device shall be provided where the length of climb is greater than 6 metres.
- (c) If platforms are necessary, ladders shall meet the following requirements:
 - The ladder shall consist of multiple sections.
 - Each section shall be horizontally offset from adjacent sections.
 - A landing platform shall be provided within the length of climb.
 - Refer to the standard drawings for additional details.

7. Concrete for Manholes

- (a) The compressive strength of concrete used shall not be less than 20 MPa at 28 days.
- (b) All concrete shall contain an air entrainment agent to provide 4% to 6% air content.

3.10 Service Boxes

Service boxes for sanitary services shall be 305 mm x 508 mm Concrete boxes complete with cast iron lid. The lettering shall read "SEWER".

Service boxes shall not be installed, they shall be supplied to the Regional District of Nanaimo's works yard.

3.11 Service Connections

Service connection piping shall be as detailed elsewhere in this standard.

Each service shall have its own independent connection into the main sewer.

Service connections shall have a minimum grade of 2% unless otherwise directed by the Engineer.

Services shall be constructed in accordance with the standard drawings.

Minimum cover for services shall be 0.75m at property line.

In rock, the trench is to be excavated minimum 1m into the property.

Approved watertight caps suitably supported by sandbags to prevent leakage shall be installed on sewer services at the terminus of each service.

A 50 mm x 100 mm wood marker stake shall be placed at the end of the service connection. The stake shall be painted red with the depth to invert of service to the nearest 0.01m marked. The wood marker stake shall be a minimum 3m from the service box

4. TESTING AND INSPECTION

4.1 Written Reports

The applicant shall submit reports to the Regional District certified by a Professional Engineer of the tests and requirements specified herein.

4.2 Materials Testing

If, in the opinion of the Engineer, testing is required, the Engineer will arrange for a testing firm to carry out tests to determine whether the applicable standards and specifications have been met. Where initial testing indicates inadequacies additional testing may be required by the engineer.

The Contractor as directed by the engineer shall supply specimens or samples for testing.

The types of tests listed below may be required by the engineer unless in the opinion of the Engineer other testing is required.

Joints for sanitary sewer main pipe and fittings and service connection pipe fittings shall be capable of meeting the following exfiltration tests. The Engineer may require that these tests be carried out by the contractor or his supplier prior to the acceptance of pipe on the project.

(a) Pipes in Proper Alignment:

Not fewer than 3, or more than 5, pipes selected from stock by the Engineer shall be assembled according to standard installation instructions issued by the manufacturer. With ends bulkheaded and restrained against internal pressure, the section shall be subjected to 70 kPa hydrostatic pressure. Pressure shall be maintained for a period of 24 hours. There shall be no leakage at the joints.

(b) Pipes in Maximum Deflected Position:

At least 2 of the joints of the assembly shall be deflected to the maximum amount recommended by the manufacturer. 35 kPa internal hydrostatic pressure shall then be applied to the test section and maintained for a period of 24 hours. Joints shall show no leakage.

(c) Pipes in Maximum Lateral Misalignment:

The test section shall be supported on blocks or otherwise so that one of the pipes is suspended freely between adjacent pipes and bears only on the jointing material. The suspended pipe shall then be loaded on the bell or coupling by a load equal to one-third of the ultimate 3-edge bearing strength required by the applicable ASTM specification, except that pipe having a laying length of more than 1.2 m shall be loaded no more than the amount computed for a 1.2 m length. While under this load, stressed joints shall show no leakage under 35 kPa internal hydrostatic pressure.

4.3 Leakage Testing of Gravity Sewers & Manholes

Leakage test shall be performed by the contractor on all sanitary sewers and service connections, manholes and appurtenances.

1. Type of Test:

- (a) Leakage testing on gravity sewers shall be tested with low pressure compressed air.
- (b) Leakage tests on concrete, ductile iron and HDPE gravity sewers shall be ex-filtration water tests.
- (c) Leakage tests on manholes shall be ex-filtration water tests
- (d) Testing shall only be carried out after the pipe has been backfilled, and only on completed sections between manholes.
- (e) All test results to be witnessed by the Engineer or the Engineer's Representative.

2. Testing Equipment:

The Contractor shall furnish all the necessary testing equipment, including suitable removable watertight plugs and test balls and shall perform the tests in a manner satisfactory to the Engineer. Testing equipment must provide readily observable and reasonable accurate measurements of leakage under the specified conditions. The Contractor must comply with all Worksafe BC regulations covering the use of air testing, and ensure that safe working practices are used in the application of the test.

3. Leakage Testing with Water:

Ex-filtration Testing:

On an exfiltration test, the test section shall be sealed at the lower extremity by means of a watertight plug. The test section shall be filled with water such that a minimum hydrostatic head of 600 mm minimum head shall be maintained for a period of not less than one hour, and unless excess exfiltration requires further testing, not greater than 8 hours. Pressures in excess of 3 metres water are not recommended. Damage resulting to pipe as a result of testing shall be repaired by the Contractor at his own expense.

Manholes shall be tested for leakage by filling the chamber to the underside of the roof slab with water. Water level shall be rechecked following a minimum time period of four hours. No leakage shall be permitted in manholes.

In areas where the groundwater table is above the sewer invert level, the test shall be increased by a height equal to the distance from the sewer invert level to the water table elevations.

Ex-filtration test sections shall normally have a manhole at both extremities. If, however, sewer grades are such that a test section cannot be terminated at a manhole without placing excess pressure on the pipe or joints, apparatus shall be provided to enable testing without having manholes at the upper and lower ends of a test section.

Gravity sewers, service connections appurtenant structures thereon shall be constructed such that leakage, as evidenced by exfiltration tests, is less than that calculated using the following formula:

$$\text{Allowable leakage in litres} = \frac{HDL}{5200}$$

Where: H = duration of test in hours,
D = inside diameter of the pipe in millimetres, and
L = length of pipe in the test section in metres

The above leakage limit will constitute the total maximum allowable leakage of any test section of gravity sewer. Where service connections exist along the test section, the allowable leakage from service pipe calculated by the use of the above formula will be added to that of the main sewer to arrive at the total allowable leakage unless the elevation of the service connection pipe is greater than the maximum water elevation. No additional leakage allowance will be made for manholes existing along the test section.

The maximum allowable leakage for an ex-filtration test will be that calculated by the above formula regardless of the test head of water employed. Where a section of sewer is found to have leakage exceeding the allowable limit, replacement or repairs shall be made to reduce the amount of leakage to or below the allowable limit. Repaired sections shall be retested until they meet the allowable limit.

All point sources of leakage discovered during the leakage testing shall be made watertight by the Contractor to the satisfaction of the Engineer.

The Contractor shall dispose of the water used for testing in a manner approved by the Engineer.

4. Leakage Testing With Air:

On an air test, the section to be tested shall be plugged at each end and all service laterals, stubs and fittings properly capped or plugged.

Air shall be supplied to the test section slowly, filling the line to a constant pressure of 24.0 kilopascals (kPa). The air pressure inside the pipe shall not exceed 27.5 kPa except in the case where the groundwater level is above the sewer line being tested. In the event of the groundwater level being above the invert, the air test pressure must be increased by 1.0 kPa for each 100 mm of groundwater above the invert.

The air supply is throttled to maintain the internal pressure above 20.75 kPa for a minimum of 5 minutes to stabilize the temperature in the pipe. After stabilization, the air pressure is adjusted to 24.0 kPa, timing commences and the time required for the line pressure to drop to 17.25 kPa is noted.

If the time required to drop from 20.75 to 17.25 kPa is greater than allowable, the test section shall have passed.

For the air test the minimum time allowable is calculated from the following tables:

Time Requirements for Air Testing

PIPE SIZE (Millimetres)	TIME	
	Min.	Sec.
100	02	32
150	03	50
200	05	06
250	06	22
300	07	39

PIPE SIZE (Millimetres)	TIME	
	Min.	Sec.
375	09	35
450	11	34
525	13	30
600	15	24

Where various pipe sizes are to undergo the air test, the average size shall be used.

5. Testing of Forcemains

Following final trench backfilling, leakage tests shall be performed on all installed piping.

Leakage tests shall be carried out between valved sections of the installation such that every valve in the system is tested for leakage in the shut-off position.

Leakage tests shall be performed in the following manner. The section to be tested shall be filled with water and all air expelled from the piping. It is recommended that the test section be filled with water for at least 24 hours prior to testing. By pumping water into the test section, the pressure within the piping shall be increased to 0.7 MPa, or 1-1/2 times the system operating pressure at the point of test, whichever is the greater. This pressure shall be maintained constantly in the pipe throughout the duration of the test by the addition of make-up water. The duration of the test section to maintain the specified pressure over the period of test shall be considered to be the leakage.

Piping will not be accepted until the leakage is less than the maximum allowable leakage determined from the following formula:

$L = ND \times \text{the square root of } P$ in which:

L = the allowable leakage in litres per hour,

N = the number of joints in the test section,

D = the nominal diameter of the pipe in millimetre,

P = the average test pressure during the leakage test in
megapascals.

Should any test disclose leakage greater than that specified above, the defect shall be located and repaired, and the section shall be retested to ensure that the leakage is within the allowable limits.

4.4 Cleaning and Flushing

On completion of sewer pipe installation, the pipes shall be cleaned to the satisfaction of the Engineer and the Regional District of Nanaimo.

Sewer lines shall be cleaned and flushed prior to video inspection.

Material displaced from flushing sewer lines shall be collected with a vacuum truck at a downstream manhole. Under no circumstances shall the material be flushed into the downstream system.

4.5 Video Inspection of Sewer Mains

All gravity sewers except services shall be video inspected to check alignment, grade, and condition of the sewer pipe.

1. Video inspections shall be of the following quality:
 - (a) Camera lens shall be free of grease or other deleterious matter to ensure optimal clarity.
 - (b) Videos shall be free of steaming and fogging encountered during the inspection.
 - (c) The camera shall pan to the service connections and pause for at least five seconds.
 - (d) Illumination depth of field shall be no less than 3 joints for standard joint and spigot pipe types to allow for pipe deflection assessments (9m). No dark circle shall be visible in the middle of this depth of field viewing area.

2. The inspections submission shall include:
 - (a) A pipe condition report including code descriptions used for describing the condition of the pipe.
 - (b) Video shall be submitted on a 4.7GB DVD.

The Engineer shall review all videos and certify that the pipe is installed in accordance with these standards and in accordance with the manufactures recommendations.

If directed by the Engineer, the contractor shall arrange for a re-inspection of the pipe at the contractors cost, for the warranty inspection one month prior to the end of the maintenance period.

Video inspection and pipe condition coding shall be undertaken only by personnel with current certification by a Regional District approved agency.

If video inspection does not meet the standards set out here, the contractor shall re-video and re-submit the video at their own cost.

4.6 Inspection

1. The Regional District of Nanaimo shall be given 48 hours notice of all tests.

5. TRANSFERRING THE SEWER SYSTEM TO THE RDN

5.1 Final Inspection by RDN

Prior to requesting a Final Inspection, the registered B.C. Professional Civil Engineer shall submit to the Regional District complete Record Documents, a completed letter Certification of Installed Works, all applicable inspection and test results (video inspection DVD's, leakage testing, etc.), and Certificate of Approval for electrical works (pump stations, wells, lighting, controls, etc.) The Final Inspection shall be arranged by the Professional Engineer on completion of the work. This shall be directed by the Professional Engineer in the presence of approved representatives of the Regional District and the installation Contractor. A complete list of deficiencies identified during the final inspection shall be prepared by the Professional Engineer. Once the deficiencies have been satisfactorily rectified, the Professional Engineer shall so notify the Regional District. The date of the Final Inspection will generally be regarded as the

commencement of the guarantee period, unless significant deficiencies critical to the effective operation of the system are found at the inspection, at the discretion of the Regional District.

5.2 Preparation/Execution of Transfer Agreement by Developer

The Developer shall prepare and execute the Transfer Agreement for the works to the Regional District.

5.3 Preparation/Execution of Maintenance Agreement

The Developer shall guarantee the workmanship and the performance of the work as per the Maintenance Agreement, from the date of acceptance (generally the RDN final inspection date) for a period of two years. This shall be additionally secured by way of cash or an irrevocable letter of credit in the amount of 5% of the cost of construction as certified by a B.C. Professional Civil Engineer, or \$10,000.00 (whichever is greater).

The RDN may reduce the length of the guarantee period and/or the amount of the security. The RDN may also require additional payment, or payout a credit as appropriate, related to an adjustment of the initial engineering fee to final construction cost values, in accordance with RDN Bylaw No. 1259.03 or most recent amendment. Any change to the guarantee period, security amount or the engineering fee is required to be in writing.

5.4 Preparation/Execution of Latecomer Agreement

Where a latecomer agreement may be applicable to a portion of the costs of the works, as agreed by the Regional District and any other applicable jurisdictions, the Developer shall pay all costs of both the Regional District and the Developer associated with the preparation, execution, and registration of the necessary Latecomer Agreement. The Regional District will assume any internal staff costs involved in planning, reviewing, approving, and administering the Latecomer Agreement preparation, and any administrative and financial costs involved during the effective time-period of the agreement. Based on current legislation, a Latecomer Agreement expires 10-years after its initial registration.

5.5 Letter of Acceptance of the Works by RDN

Following completion of all the foregoing requirements, the Regional District will issue the formal Letter of Acceptance of the Works.

The Regional District will also issue a written statement that the new works can be connected to the District's existing system. Such connection shall be undertaken by the applicant under the direct supervision of the District or by the District at a cost to the applicant.

**APPENDIX 3
CERTIFICATE OF DESIGN**

CERTIFICATE OF DESIGN

I, _____, a Professional Engineer registered in the Province of British Columbia, hereby certify that the works as herein set out on the attached drawings entitled _____

_____ have been designed in accordance with the Regional District of Nanaimo Bylaw 500 and/or in accordance with good engineering practice where such design is not covered by the Regional District Bylaw 500.

I have been retained to provide design, supervision, full-time inspection, as-built drawings, and final certification for this project by:

(Name of Client)

I am satisfied that in the contractual mandate which exists between myself and my client, the terms of reference will permit me to render a level of supervision of the construction work which will allow me to put my name and seal to the "Certification of Installed Works" required by the Regional District of Nanaimo, a sample of which is attached to this document and initialed by me.

In the event that my client releases me from this project, or in the event that I find the terms of reference do not permit me to render a level of supervision of the construction work which will allow me to put my name and seal to the form of certification required by the Regional District of Nanaimo, I will notify the Regional District within twenty-four (24) hours verbally and follow it up with written confirmation and clarification.

Signed this _____ day of _____, 20____.

_____, P.Eng.

(signature)

(name printed)

I understand that the "Certification of Installed Works" is to be completed in this format and submitted with the "as-constructed" drawings.

(Name of Customer)
up to an aggregate amount of _____ available on demand.

Pursuant to the request of our customer, we hereby establish and give you a Standby Irrevocable Letter of Credit in your favour in the above amount which may be drawn on by you at any time and from time to time, upon written demand for payment made upon us by you, which demand we shall honour without enquiring whether you have the right as between yourself and the said customer to make such demand, and without recognizing any claim of our said customer, or objection by it to payment by us.

This Letter of Credit relates to those Regional District of Nanaimo services and financial obligations set out in an Agreement between the customer and the Regional District of Nanaimo and briefly described as:

The amount of this Letter of Credit may be reduced from time to time as advised by notice in writing to us by the Regional District of Nanaimo.

Partial or full drawings may be made.

This Letter of Credit shall expire at 3:00 p.m. on _____. This Letter of Credit will continue in force for a period of 1 year, but shall be subject to the condition hereinafter set forth.

It is a condition of the Letter of credit that it shall be deemed to be automatically extended without amendment from year to year from the present or any future expiration date hereof, unless at least 30 days prior to the present or any future expiration date, we notify you in writing by registered mail, that we elect not to consider this Letter of Credit to be renewable for any additional period. This Letter of Credit is subject to the Uniform Custom and Practice for Documentary Credits (1993 Revision) International Chamber of Commerce Publication No. 500.

DATED at _____, British Columbia, this ____ day of _____, 20__.
